ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimens.

Please quote the name and the number of the specimen(s) required, and enclose P.O./Cheque with order.

No charge is made for postage and packing, except for overseas customers and postage over 50p.

We reserve the right to make slight substitutions, if necessary, of specimens of comparable size and quality to those ordered, unless advised to the contrary.

Special requests and 'wants lists' are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

March 1973

1. ADAMITE. Minas Ojuela, Mapimi, Mexico. Well formed, lustrous yellow-green crystals richly scattered and intergrown on limonitic gossan. 3x2½". £5.

2. ANATASTE. Bourg d'Oisans, Isere, France. Superb, sharp doubly terminated crystals scattered on schistose matrix. 1½x2½". £10.

3. APACANITE. Burra-Burra, Yorke Peninsular, South Australia. Radiated crystal sprays coating hematite gossan. 3½x2". £4.50.

4. AZURITE. Tsuaneb, Otavi, S.W. Africa. Bright, terminated ¼" tabular crystal in cavity in gossan, with odd scattered Cerussite crystals. 3x2½". £4.

5. AZURITE. Chessy, Near Lyon, Rhone, France. Very fine group of sharp, intergrown, lustrous crystals. Individual crystals to ½" in size. 1½x1½". £15.

7. BETA-URANOPHANE. Haute-Vienne, France. Small, well formed, terminated needly crystals encrusting uraniferous hematised granite. 2½x½". £5.

8. BISMUTH. Botellack Mine, St. Just, Cornwall. Small metallic cleavages scattered in limonitic jasper. 1½x1½". £1.

9. CASSITERITE. Seal Hole Mine, St. Agnes, Cornwall. Lustrous, sharp black crystals with minor quartz and chlorite, encrusting tourmalinised slate matrix. 1½x1½". £3.

11. CASSITERITE. Wheal Kitty, St. Agnes, Cornwall. Small dark brown, sparkling crystals lining druses in quartz/ altered slate veinstuff. 4½x3". £5.

15. CHALCOCITE. Mibladen, Atlas Mountains, Morocco. 1" tabular crystal, with much parallel growth, on platy barytes. 1½x1¾". £4.

16. CHALCOSPARITE. Pentire Glaze Mine, Polzeath, Cornwall. Intergrown mass of white 'jack-straw' crystals on limonitic quartz. 1½x1¾". £3.

18. CHALCOCITE. St. Ives Consolidated Mine, St. Ives, Cornwall. 3½" group of intergrown stout hexagonal crystals. £5.

21. CONELILITE. Copper Queen Mine, Bisbee, Arizona. Choice intergrown crystals, with small perfect, terminated crystals in cavities, on malachite-cuprite matrix. 1½x1¾". £10.

22. COPPER. Botallack Mine, St. Just, Cornwall. Tarnished hackly sheet with minor slate matrix. 4x3". £3.

24. CROQUITE. Cacilite Mine, Duncas, Tasmania. Lustrous orangey crystals, richly intergrown with minor limonite. 1¾x1¾". £5.

27. CURITE. Wheal Gorland, St. Day, Cornwall. Large vein-section, consisting of bright, sharp octahedral cuprite crystals lining numerous cavities in granular quartz associated with a large mass of crystalline NATIVE COPPER. 5x3½x2". £12.

28. ELLSWORTHITE. McDonald Mine, Rybla, Ontario, Canada. Resinous masses richly aggregated in calcite matrix. 2x2". £3.

29. FLUORITE. Blackdene Mine, Warrington, Co. Durham. Choice group of purple, intergrown cubic crystals. Largest crystals 1½" on face edges. 6x3½". £5.

32. GALTITE. Restormel Royal Iron Mine, Lostwithiel, Cornwall. Fine fibrous, radiated botryoidal mass, showing the typical 'wood iron' bonding characteristic of this mineral. 3½x2½". £4.50.

34. **GOLD.** McIntyre-Porcupine Mine, Timmins, Ontario, Canada. Very rich hackly masses cementing fragments of quartz. 3x4". £5.

35. **HEMATITE.** Rio Marina, Isle of Elba, Italy. Sharp, splendid crystals, with an attractive iridescent tarnish, scattered on small quartz crystals. 2x1½". £5.

36. **HEULANDITE.** Old Kilpatrick, Dumbartonshire, Scotland. Brick red crystals to 3" in size, thickly intergrown and encrusting Andesite. 4x2". £7.

38. **MALACHITE.** Copper Queen Mine, Bisbee, Arizona. Fine banded, stalactitic mass of good colour and form. 4x3x2½". £7.

40. **MIMETITE.** Driggeth Mine, Caldbeck Fells, Cumberland. Light green, curved crystals thickly encrusting granular quartz matrix. 2½x2½". £5.

43. **OLIVENITE.** Wheel Gorland, St. Day, Cornwall. Olive green needly crystals radiating in cavities in quartzose gossan. 2½x2½". £5.

44. **PHARMACOSIDERITE.** Wheel Gorland, St. Day, Cornwall. Small, lustrous green cubic crystals richly encrusting cellular quartz. 2x2½". £8.

46. **PROUSTITE.** Schneeberg, Saxony, Germany. A group of dark red, rounded intergrown crystals, some showing good terminations. 2x1½". £14.

47. **PYRITE.** Wheel Kitty, St. Agnes, Cornwall. Bright, modified cubic crystals, strongly striated, encrusting granitic matrix. 3x3½". £7.

48. **PYROMORPHITE.** Wheel Alfred, Phillack, Cornwall. Lime green hexagonal crystals richly encrusting quartz matrix. 1½x1". £2.

49. **QUARTZ.** Wheel Kitty, St. Agnes, Cornwall. Fine group of clear, wellformed and terminated crystals radiating out from matrix, with odd scattered crystals of Pyrite. 3x3½". £6.

50. **SCOUCHITE.** Carharrack Mine, Guennap, Cornwall. Light green radiated aggregates of crystals on massive arsenopyrite. 2½x1½". £1.

51. **SILVER.** Cobalt, Ontario, Canada. Solid nuggetty mass with minor calcite. 1½x1¾". £7.

52. **SILVER.** Quincy Mine, Houghton, Keweenaw Peninsular, Michigan. Sharp, slightly tarnished crystals intergrown on crystalline native copper with minor calcite. 3x2". £10.

54. **SODDYITE.** Chinkolobwe, Katanga, Zaire. Mustard yellow, perfect crystals, richly encrusting and veining uraniferous matrix. 1¼x1". £15.
55. **SPHALERITE.** Wheel Boys, Bodannon, Cornwall. Lustrous black crystals intergrown with creamy crystalised dolomite. 2¾x1½". £1.

56. **SPHALERITE.** New Glencreeiff Mine, Wanslockhead, Dumfrieshire. Group of large, bright, blackish intergrown crystals, with minor calcite. 4x4". £5.

57. **STANNITE.** West Pool Mine, Illogan, Cornwall. Tarnished metallic masses richly aggregated in quartz-felspar matrix. 3x3". £3.

58. **TELLURITE.** Offenbanya, Rumania. Yellow crusts on matrix with minor Native Gold. 1x⅛". £2.

59. **TOKBERNITE.** Mine Bois Noir, St. Priest-le-Prugne, Forez, France. Well formed, tubular crystals, deep green in colour, thickly intergrown on matrix. 2x1¼". £12.

60. **TYUYAMUNITE.** Yellow Cat District, Grand Co., Utah. Bright yellow, rich crust on sandstone matrix. 1x⅛". 50p.

61. **VANADIUMITE.** Apache Mine, near Globe, Gile Co., Arizona. Bright red perfect hexagonal crystals completely encrusting matrix, with minor calcite in association. 5x3½". £12.

62. **URANITHURANITE.** Antanimora, Madagascar. ¾" sharp cubic crystal. £1.
