ORDERING INFORMATION

Mail orders are promptly filled and dispatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and the number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 50p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

JANUARY 1975

1. ALLEMETITE. Atlin, British Columbia, Canada. Choice, bright, silvery grey, botryoidal mass showing concentric layers, associated with a little Calcite and Quartz. 2¼ x 1½". £6.50.

2. ANDRADITE variety MELANITE. San Benito Co., California, U.S.A. Lustrous, jet black, very sharp crystals to ¼ mm. in size richly encrusting a Chloritised rock. 2 x 1¼ x 1". £3.25.

3. ANGLESITE. Redgill Mine, Caldbeck, Cumberland. Translucent to transparent, sharp, glassy, modified crystals to 5 mm. in size, aggregated and scattered on Quartz/Galena matrix with minor rods of Cerussite in places. 2½ x 2". £3.25.

4. APOPHYLLITE. Poona, India. Specimen A - Fine, sharp, transparent well formed crystals to ¼ in size, richly intergrown and associated with sheafs of creamy white Stilbite crystals ranging in size from ¼ - ½". 3½ x 2½". £3.75; Specimen B - Transparent, sharp, crystals mostly around ⅛ in size, and with a faint greenish tinge, thickly intergrown and encrusting both sides of matrix and associated with odd creamy white sheafs of Stilbite. 3½ x 2½". £6.50.

5. ARAGONITE. Git-Labbes, Atlas Mts., Morocco. An unusual snow-white tubose ramifying mass of the "flos-ferri" type associated with platy hexagonal crystals of translucent Calcite to ½" in size. 3½ x 2¾ x 2". £6.50.

6. ARGENTITE. Freiburg, Saxony, Germany. Small, dark grey, modified cubic crystals to 2 mm. in size, aggregated on a vein section of crystaline cellular Argentite with a little Quartz and traces of other silver minerals. 2¼ x 2". £6.50.

7. ARTINITE. San Benito Co., California, U.S.A. Choice, snow white, thick vein section of radiated needle crystals with large cavities completely lined with velvet like needles. 3½ x 2½". £7.75.

8. ATACAMITE. Atacama Desert, Chile. Superb, lustrous, deep green, cellular mass of very sharp intergrown doubly terminated crystals. Most of the crystals are around 3 - 4 mm. in size and show perfect faces. 2¼ x 2". £16.50.

9. AZURITE. Chessy, Rhone, France. Specimen A - Three bright blue crystalline balls of Azurite each approximately ½" in diameter implanted on a light coloured matrix with traces of Malachite. 2¾ x 2". £5.50.
10. AZURITE. Laurion, Attica, Greece. Bright blue, sparkling micro crystals thickly encrusting and completely lining a cellular stalactitic mass of Limonite with minor small patches of crystalline Malachite. Very colourful specimen for display. 7½x1". £16.50.

11. BADDELEYITE. Phalaborwa, Transvaal, S. Africa. Bright black, tabular crystals and crystal sections to ½" in size embedded in Carbonatite matrix. 1x1¼". £1.65.

12. BARYTES. Force Crag Mine, N. Keswick, Cumberland. Lustrous, creamy white, sharp tabular crystals to 1" in size forming an attractive intergrown mass, with most of the crystals aggregated in parallel growth. Specimen A - 4x3". £8.75; Specimen B - 2x2". £1.25.

13. BARYTES. Silverband Mine, Dun Fell, Westmoreland. Specimen A - An intergrown group of large translucent to transparent sharp, well terminated, thick tabular crystals, with face edges to 1¼" in size. 3½x2½". £6.50; Specimen B - A single, sharp, thick tabular, translucent, well terminated crystal. 2¼x1¼". £2.25.

14. BARYTOCALCITE. Blagill Mine, Nr. Alston, Cumberland. Choice, transparent, sharp creamy coloured elongated terminated crystals to ½" in length, thickly lining large cavities in cellular Barytocalcite/Limestone veinstuff. Very fine and well crystalised examples of this mineral from the type location. Specimen A - 2¼x1½". £6.50; Specimen B - 2x1½". £2.75.

15. BAYLONDITE. Brandy Gill Mine, Jelcbeck, Cumberland. Rich, apple green, crusts thickly covering cellular Quartz. 2x2". £1.25.

16. BISMUTHINITE. Shap Granite Quarry, Shap, Westmoreland. Bright, silvery grey, metallic, bladed crystals richly embedded in Quartz on pinkish Granite. 1½x1". £1.65.

17. BOURNONITE. Herodsfoot Mine, Lanreath, Cornwall. Specimen A - Deep grey, metallic, sharp twinned, cog-wheel crystals forming an intergrown group approx. 1" in size and implanted on small hexagonal Quartz crystals covering Slate matrix. 2½x2". £11; Specimen B - Bright, metallic, grey twinned tabular crystals to ½" in size intergrown and partially overlain with curved light brown Siderite crystals which are, in turn, frosted with a thin crust of drusy Pyrite crystals. 1¼x1½". £7.75; Specimen C - Small, bright grey, slightly rounded cog wheel crystals to ½" in size richly intergrown on Quartzose matrix. 1x1". £4.50.

18. BROCHAHITE. Morenci Mine, Greenlee Co., Arizona, U.S.A. Lustrous, emerald green, elongated needly crystals to 1 cm. in length, thickly lining cavities in dark Limonitic Gossan. 3x2½". £7.75.

19. CABRERITE. Laurion, Attica, Greece. Light, apple green, lustrous platy crystals, aggregated in small cavities in and thinly scattered on Limestone/Calcite matrix. 2¼x1⅞x2½". £3.25.

20. CALCITE. Hailemoor Mine, Nr. Egremont, W. Cumberland. Well-formed terminated, translucent, creamy white, hexagonal 'nail head' crystals to ½" in length, thickly encrusting matrix with minor reddish Hematite and light brown Dolomite in association. 4x4x2½". £8.75.

21. CASSITERITE. Dolcoath Mine, Camborne, Cornwall. Rich, lustrous, deep brown pure crystalline mass with minor fragments of deep reddish Hematite and whitish Quartz. An old label is attached to the specimen. 2x2x1½". £2.75.
CASSITERITE. Savath Claywork, Luxulyan, Cornwall. Lustrous, black, well formed crystals to 4 mm. in size richly scattered on and lining cavities in radiated deep bluish black Tourmaline with minor Quartz and Greisen. An old label is attached to the specimen. 4x3x2". £8.75.

23. CERUSSITE. Leadhills, Lanarkshire, Scotland. A large, lustrous, creamy grey cyclic twinned crystal showing good form intergrown with and implanted on fragments of Slaty vein stuff. Crystal size approx. 1\(\frac{1}{2}\)x1\(\frac{1}{2}\)" - overall size of specimen 2\(\frac{1}{2}\)x1\(\frac{1}{2}\)". £7.75.

24. CERUSSITE. Tsumeb, Otavi, S.W. Africa. Bright, glassy, sharp, very well formed transparent crystals, showing much twinning in places, and with individual crystals to \(\frac{1}{2}\)" in size, thickly encrusting and intergrown on all sides of a cellular matrix. 3x3x1\(\frac{1}{2}\)". £8.75.

25. CHABAZITE variety PHALOLITE. The Storr, Isle of Skye, Scotland. Bright, translucent creamy white, sharp crystals to 4 mm. in size, thickly lining a 1x1" cavity in dark Basalt matrix. 2\(\frac{1}{2}\)x2". £2.75.

26. CHALCOCITE. Cooks Kitchen Mine, Camborne, Cornwall. Metallic grey, small sharp, hexagonal crystals to 4 mm. in size, scattered on cellular Chalcocite/Quartz vein stuff and associated with small tarnished modified aggregates of Chalcocite crystals which have been partially replaced by Bornite. 1\(\frac{1}{2}\)x1\(\frac{1}{2}\)x1\(\frac{1}{2}\)". £8.75.

27. CHALCOCITE. Levant Mine, Pendeen, Cornwall. Select, pure, solid, bright grey, metallic masses with very minor Hematite in association. These are extremely rich samples from this famous old copper mine. Specimen A - 4x4x2\(\frac{1}{2}\)". £6.50; Specimen B - 4x3x2". £4.50.

28. CHALCOPHYLLITE. Wheal Gorland, St. Day, Cornwall. Small, emerald green, platy hexagonal crystals scattered in small cavities in deep red Cuprite matrix with minor light green Malachite and traces of bluish Connellite. 2x2". £5.50.

29. CHALCOPYRITE. French Creek Mines, Chester Co. Pennsylvania, U.S.A. Choice, large, brassy, skeletal crystals, mostly around \(\frac{1}{2}\)" in size, thickly intergrown and encrusting massive Chalcopyrite matrix with minor Pyrites in association. In small cavities in the matrix the Pyrites forms sharp, octahedral, crystals ranging up to 5 mm. in size. 5\(\frac{1}{4}\)x3\(\frac{1}{4}\)". £13.

30. CHURCHITE. Sausalito, Marin Co., California, U.S.A. Rich, snow-white, micro radiated crystal aggregates encrusting dark Limonitic matrix. 2\(\frac{1}{2}\)x2x1\(\frac{1}{2}\)". £7.75.

31. CLINOCASE. Wheal Gorland, St. Day, Cornwall. Dark blue, lustrous, intergrown crystals and crystal aggregates scattered in cavities in and on cellular Quartz. 1x1\(\frac{1}{2}\)". £7.75.

32. COLEMANITE. Boron, Inyo Co., California, U.S.A. Fine, transparent, sharp, terminated bladed crystals to \(\frac{1}{2}\)" in size, thickly encrusting massive Colemanite. 2\(\frac{1}{2}\)x1\(\frac{1}{2}\)x2". £7.75.

33. COLUMBITE. West Pokot, Kenya. Specimen A - A large, crude, lustrous black crystal, showing some good faces and associated with minor Feldspar and Muscovite mica. 2\(\frac{1}{2}\)x1x1". £3.25; Specimen B - A sharp, lustrous black, terminated twinned single crystal with sharp faces. 1\(\frac{1}{2}\)x\(\frac{3}{4}\)x\(\frac{3}{4}\)". £2.75.
35. **CUPRITE.** Wheal Unity, Gwennap, Cornwall. Small, deep maroon coloured, sharp octahedral crystals thickly intergrown and encrusting cellular metallic Native Copper. Specimens approx. 1x1". £1.25 each.

36. **CUPRO-ADAMITE.** Laurion, Attica, Greece. Light green, lustrous, small crystals thickly lining small cavities in Limonitic matrix. 3x2". £2.75.

37. **CUPRODESCLAJSLITE.** Whale Mine, Goodsprings, Nevada, U.S.A. Sparkling, light greenish black, micro crystals richly lining cavities in dark Quartzose vein stuff. 2½x1½x1½". £2.25.

38. **DELAFOSSEITE.** Copper Queen Mine, Bisbee, Conchise Co., Arizona. U.S.A. Choice, bright, greyish black, small sharp crystals thickly lining small cavities in dense Limonitic Gossan with minor metallic crystalline Native Copper and deep red Cuprite in association. 2½x2x1½". £7.75.

39. **EPIDOTE.** Machakos, Kenya. Lustrous, bright olive green, long thick bladed crystals and crystal sections to 2" in length, intergrown with minor translucent Quartz. 3x2½x1½". £5.50.

40. **FERRIERITE.** Silver Mountain, Loope Mining District, Alpine Co., California, U.S.A. Lustrous, white, needly crystals thickly lining a cellular matrix, with some areas having a light orange tinge. 1½x1½". £3.25.

41. **FERTRITUNGSTITE.** Bjordal Mine, Kabole, Uganda. Light yellow, ochreous masses thickly aggregated in cavities in leached cellular black Ferberite with areas of white ANTHIONITE in association. 1½x1½". £1.65.

42. **FLUORITE.** Hilton Mine, Scordale, Westmoreland. Specimen A - Light yellow, sharp cubic crystals, to ½" in size, and being mostly transparent, thickly intergrown and encrusting Quartz vein stuff. 6x5½". £9.75; Specimen B - Large, light yellow, translucent to transparent, sharp cubic crystals to ¾" in size, forming an intergrown group. 3x2½x2". £5.50; Specimen C - Bright yellow, transparent cubic crystals, mostly around ½" in size, richly intergrown and aggregated on crystalised platy white Barytes. 2¼x1¼x1½". £4.50; Specimen D - Light yellow, transparent, sharp cubic crystals, mostly around ¼" in size, forming an intergrown group with minor Galena. 2x1½". £3.25.

43. **GALENA.** Rotherhope Fell Mine, Alston Moor, Cumberland. Large, metallic grey, modified, sharp cubic crystals to 1" in size, intergrown on Limestone matrix and associated with light translucent cubic Fluorite crystals to 1½" in size and odd small drusy Quartz crystals. 3½x4¼". £7.75.

44. **GALENA.** Leadhills, Lanarkshire, Scotland. A fine pure, lustrous lead grey, cleavage mass with one side showing crystal face development. An interesting old sample from this once prolific mining area. 6x4x2½". £11.

45. **GILBERTITE.** Gunheath Claywork, Nr. St. Austell, Cornwall. Choice, light yellowish green coarse, platy, crystalline mass associated with minor blackish Tourmaline and a little Quartz. 3½x2½". £3.25.
GROSSULARITE variety HESSONITE. Val d’Ala, Piedmont, Italy. Specimen A - Lustrous, light orangey, sharp translucent crystals to 4" in size, richly scattered on massive Garnet matrix, with minor greenish plates of Clinohlore in association. £11. Specimen B - Choice, bright orange, small sharp crystals to 5 mm. in size, richly aggregated on Clinohlore matrix and associated with large, sharp, terminated, crystals of Diopside to 1 cm. in length. £9.75.

47. GYPSUM variety SELENITE. Eagle Picher Mine, Nisca, Chihuahua, Mexico. A group of choice, large, well terminated sharp elongated, intergrown, translucent milky white crystals. The largest crystals range up to 3" in length and the specimen is excellent for display. £5.

48. HARMOTONE. Foxrock Mine, Glendasan, Co. Wicklow, Ireland. Small, sharp, translucent crystals to 3 mm. in size, scattered on crystalline Quartz with minor Sphalerite in association. The specimen was collected by Sir Arthur Russell in 1920, and one of his hand written labels accompanies the sample. £2.75.

49. HEMATITE. Rio Marina, Isle of Elba, Italy. Bright, black, sharp well formed crystals to 4" in size, thickly intergrown and associated with very minor small crystals of Quartz. £11.

50. HEMIHEDRITE. Wickenburg, Maricopa Co., Arizona, U.S.A. Orangey red micro crystals and small crystal masses scattered in small cavities in leached Quartz. £3.25.

51. HEMIMORPHITE. Santa Eulalia, Chihuahua, Mexico. Transparent, sharp, elongated, well terminated crystals to 1 cm. in length, thickly encrusting Limonitic Gossan and partially invested with small rhombs of white Calcite. £4.50.

52. HETEROCENITE. Chinkolobwe, Katanga, Zaire. Lustrous black, rich, botryoidal mass associated with very minor Quartz. £3.25.

53. HEULANDITE. Aussig, Bohemia, C.S.S.R. Bright, sharp, doubly terminated glassy crystals, mostly around 1" in size, richly scattered over drusy Quartz, and associated with odd small sharp, pale green, octahedral Fluorite crystals, all covering a Gneissose rock. £9.75.

54. HOLLANDITE. Sorharas Mountain, Ultevis Range, Knickjokk, Sweden. Very rich, fibrous, crystalline blackish grey metallic mass, intergrown with minor Quartz. £7.75.

55. IDOCLASE (Vesuvianite). Monte Somma, Vesuvias, Naples, Italy. Lustrous, well formed, light brown terminated crystals and crystal sections to 1" in size intergrown on Calcite with minor small plates of Phlogopite mica. £4.50.

56. IODYRITE. Proprietary Mine, Broken Hill, N.S. Wales, Australia. Small, pale yellow, crystals and crystal masses richly scattered over dark brown Limonitic Gossan with minor Quartz. £5.25.

57. JAMESONITE. Trewetha Mine, St. Endellion, Cornwall. Bright, metallic, silvery grey, fibrous crystalline mass richly intergrown with minor milky Quartz. £7.75.

58. JAROSITE. Los Lamentos, Chihuahua, Mexico. Pure, Light orangey yellow, earthy mass with very minor inclusions of Calcite. £2.25.
60. **LEADHILLITE.** Leadhills, Lanarkshire, Scotland. Specimen A - Lustrous, pearly white, hexagonal platy crystals thickly aggregated on a 1" area on one side of Quartz/Galena matrix, with minor thin crusts of Pyromorphite. 1¼x1¼". £3.75; Specimen B - Rich, pure, pearly white platy crystaline mass with traces of Pyromorphite in association. 2x1¼". £4.50; Specimen C - A 1 cm. sized aggregate of white platy crystals associated with a little crystalline Cerussite on Quartz/Galena matrix. 1½x1½". £1.25.

62. **LINARITE.** Redgill Mine, Sedgbeck, Cumberland. Bright blue, lustrous, bladed crystalised masses richly aggregated on granular Quartz. Specimen A - 1½x1½". £3.25; Specimen B - Not so rich in Linarite as Specimen A - 1½x1½". £2.25.

63. **LISKEARDITE.** Penberthy Crafts Mine, St. Hilary, Cornwall. Rich, snow-white, thick micro crystalised crusts lining large cavities in Gossan. Specimen A - 2½x1½x1½". £3.25; Specimen B - 1½x1½". £1.25.

64. **MAGNETITE.** Traversella, Piedmont, Italy. Specimen A - Lustrous, black, sharp modified octahedral crystals to 1 cm. in size, thickly intergrown and encrusting massive Magnetite. 3½x2½". £11; Specimen B - Sharp, black, modified octahedral crystals to 1 cm. in size, richly intergrown on an area 1½x1½", on matrix of massive Magnetite. 2½x1½x1½". £7.75.

65. **MALACHITE.** Mapimi, Durango, Mexico. Choice, bright green, velvety, fibrous crystals to 1 cm. in length, forming attractive radiated aggregates in large cavities in Limonitic Gossan, and associated with minor pale blue velvety Aurichalcite. 3x2x1½". £11.

67. **MEXITE.** Schneeberg, Saxony, Germany. Light, apple green fibrous crystal aggregates to 2 mm. in size, thinly scattered on Quartzose matrix. 1½x1½". £3.25.

68. **MOLYBDENITE.** Kingston Down, Mr. Jallington, Cornwall. Choice, metallic, grey shining crystal aggregates to ½" in size, richly encrusting Aplitic Rock. Specimen A - 4x3". £4.50; Specimen B - 3x2". £1.65.

69. **NATROLITE.** Dene Quarry, St. Keverne, Lizard, Cornwall. Creamy white elongated well formed crystals, some showing terminations, to 1" in length, thickly intergrown and spanning cavities in Calcite/Gabbro matrix and associated with lustrous white, sharp ANALJIME crystals to ½" in size. 6x3½". £6.50.

70. **OLIVENITE.** Wheal Gorland, St. Day, Cornwall. Light, olive green, fibrous, velvet like micro crystals, thickly lining a 2x1" cavity in Quartzose gossan. 4x2½". £8.75.
72. OSUMILITE. Monte Arci, Sassari, Sardinia. Small, sharply lustrous, blackish blue crystals, mostly around 2 mm. in size, scattered over cavernous Rhyolite. 3½x2". £4.50.

73. PARAVUXITE. Llallagua, Potosí, Bolivia. Lustrous, creamy coloured crystals, some showing good terminations, to ¼" in length, thickly intergrown on matrix. 1x1". £3.25.

74. PERILLINE. Goschenentalp, Uri, Switzerland. Large, snow-white, sharp well formed crystals to ½" in length, thickly encrusting a Schistose matrix and associated with odd glassy sharp crystals of ADULRILLIA to ⅜" in size. The base of the specimen has been sawn flat to display it to best advantage. 6x3¼x2⅛". £16.50.

75. PLANCHEITE. Msesa, Katanga, Zaire. Choice, light blue, rounded fibrous radiated crystal aggregates thickly intergrown with very minor Malachite. On one end of the specimen there is a 1½" long cavity lined with lustrous deep green small, sharp, Malachite crystals. 3½x2½". £13.

77. PYRITES. Kilembe Mine, Uganda. A large, well formed, bright octahedral crystal with faces 2" in size with two minor crystals each with faces approx. 1" in size attached to it. There is slight damage in places together with a little attached bronzey Pyrrhotite. 2¼x2x2". £4.50.

78. PYROMORPHITE. Roughenhyll Mine, Jaldock, Cumberland. Fine, lustrous, light yellowish green, tapering hexagonal crystals to 1 cm. in size, thickly intergrown and encrusting massive crystalline Pyrites. 3x2⅛". £7.75.

79. QUARTZ. Cooks Kitchen Mine, Camborne, Cornwall. A most unusual specimen consisting of a confused intergrown mass of long crude, terminated hexagonal Quartz crystals, frosted over with a coating of drusy Quartz and with large, hollow, lenticular Epimorphs of Quartz after Siderite. The Quartz epimorphs have faithfully taken the shape of the Siderite crystals and range up to ½" in size. 5¼x4x½". £16.50.

80. QUARTZ. Crystal Peak, Teller Co., Colorado, U.S.A. A sharp, well formed, dark, smoky, single hexagonal terminated crystal with very minor microcline Feldspar attached. ¾" long x ¼" across the axis. £1.

81. SCORODITE. Hemerdon Ball Openwork, Plympton, Devon. A ¾" cavity in Quartz/Wolframite matrix completely lined with small, very sharp, lustrous, bluish green crystals. 2¼x2½". £6.50.

82. SMITHSONITE. Tsumeb, Otavi, S.W. Africa. Specimen A - Choice, very sharp, creamy translucent rhombic crystals to ½" in size, thickly intergrown on matrix. 3x2". £1; Specimen B - Lustrous, pale green, sharp rhombic crystals to 1 cm. in size, thickly lining large cavities on both sides of cellular matrix. 2x2x1½". £6.50.
SODLYITE. Chinkolobwe, Katanga, Zaire. Bright, mustard yellow, small sharp crystals thickly encrusting uraniferous matrix. $1.2.

84. SPECULARITE. Florence Mine, Nr. Egremont, Cumberland. Specimen A - Bright, shining black, sharp platy crystals, thickly intergrown and associated with large well formed lustrous doubly terminated pyramidal Quartz crystals to 1 cm. in size, all thickly encrusting Hematite matrix. $6.50; Specimen B - A stalactite of Hematite completely encrusted with bright, sharp, shining, black Specularite crystals. $5.50; Specimen C - Small, sparkling black platy crystals, richly aggregated with light pink small, tabular, Barytes crystals and odd lustrous, translucent, sharp Quartz crystals on massive Hematite. $4.50; Specimen D - Bright, black, platy crystals thickly encrusting Hematite on which is implanted a large sharp, doubly terminated, pyramidal Quartz crystal 1" in size. $1.65.

85. SPHALERITE. Browley Hill Mine, Nenthead, Cumberland. Lustrous, black, small sharp crystals completely encrusting Limestone. $7.75.

86. SPHALERITE. Trepca, Yugoslavia. Specimen A - Large, sharp, striated black crystals to 3" in size, richly intergrown and associated with bright metallic bronzy modified cubic Pyrites crystals to 1 cm. in size, large sharp milky white nail-head Calcite crystals to 1" in size, and minor pale creamy pink crystalised aggregates of Rhodochrosite. A very attractive specimen for display. $16.50; Specimen B - Large, well formed, lustrous black crystals to 3" in size aggregated with creamy coloured crystalline masses of Rhodochrosite, long slender terminated hexagonal crystals of Quartz to 3" in length, and small modified brassy crystals of Pyrites. $8.75.

87. SPHALERITE. New Glencrief Mine, Wanlockhead, Dumfries, Scotland. Large, lustrous black, sharp crystals in parallel growth richly intergrown on drusy Quartz with minor creamy white 'dog tooth' Calcite crystals in association. $3.25.

89. STIBNITE. Bajuz, Rumania. Superb, bright, metallic grey thick terminated sharp elongated crystals to 1" in length radiating from and completely covering very minor cellular Quartz matrix. $65.00; Specimen B - Fine, brilliant silvery grey, elongated terminated crystals to 1" in length, forming radiated rosettes to 1" in size and attractively richly aggregated on white Dolomite matrix. $44.00.

90. STILBITE. The Storr, Isle of Skye, Scotland. Lustrous, creamy white, sharp well formed crystals mostly around 1/4" in size, thickly intergrown and encrusting Basalt. $2.75.

91. TETRADYMITE. Jarrock Mine, Jaldbeck, Cumberland. Specimen A - A rich, 1/2", bright silvery bladed crystalline mass embedded in quartz. $4.50; Specimen B - 1/2" silvery bladed mass embedded in Quartz with odd smaller masses. $3.25.
92. TORBERNITE. Mt. Painter, Flinders Ranges, S. Australia. Bright, emerald green, platy rectangular crystals to 5 mm. in size thickly aggregated and scattered on Hematitic vein stuff. 1½ x 1½ " . £7.75.

93. URANINITE. Trenwith Mine, St. Ives, Cornwall. Pure, resinous, black mass with minor fragments of Hematite and Quartz. 2 x 1" . £3.25.

94. VALENTINITE. Pribram, Bohemia, C.S.S.R. Pearly white, elongated thin tabular crystals to ½" in length, scattered on lenticular brown Siderite crystals on Galena matrix, with minor Jerussite in association. 3 x 2½" . £16.50.

95. VIVIANITE. Wheal Kine, St. Agnes, Cornwall. Dark lustrous, blackish blue bladed crystals aggregated in a ½" area on Quartz/Pyrite/Siderite vein stuff. 2 x 1½" . £2.75.

96. WAVellite. High Down Quarry, Filileigh, Devon. Choice, pale green, radiated crystal aggregates to 1 cm. in diameter thickly encrusting a dark Slate. 2½ x 1½" . £4.50.

97. WHERRYITE. Mammoth Mine, Tiger, Pinal Co., Arizona, U.S.A. Pale, apple green, small masses and crusts on and in Quartzose matrix with minor bluish Diaboleite and creamy Jerussite. 2 x 1½" . £1.65.

98. WITHERITE. South Moor Colliery, Lanchester, Co. Durham. A 1½" group of intergrown translucent creamy white hexagonal crystals implanted on massive Witherite. 2 x 1½ x 1½" . £4.50.

99. WULFENITE. San Francisco Mine, Sonora, Mexico. Choice, lustrous, transparent, bright yellowy orange, wafer-like sharp tabular crystals thickly intergrown on drusy yellow Mimetite covering Limonitic matrix. Individual Wulfenite crystals range up to ½" in size and the specimen is extremely attractive and colourful. 2½ x 2½" . £13.00.

100. WULFENITE. Red Cloud Mine, Yuma Co., Arizona, U.S.A. A single, lustrous sharp bright orangey red tabular crystal 2 cm. in size. £3.25.

102. YTTROTANTALITE. Ytterby, Sr. Stockholm, Sweden. Pure, deep brown, resinous mass. 2 x 1½" . £1.25.

103. ZINNWALDITE. Zinnwald, Bohemia, C.S.S.R. Choice, large, silvery, grey hexagonal crystal books to ½" in size thickly intergrown and free standing on Quartz with very minor purplish Fluorite. 2½ x 2" . £6.50.

We would like to take this opportunity to thank all our customers for their support in 1974 and to wish you all a happy and prosperous 1975.

ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and the number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 50p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

FEBRUARY 1972

1. ADAMITE. Mina Ojuela, Mapimi, Durango, Mexico. Specimen A - Fine, bright, light yellowish green sprays of sharp, well terminated, crystals to \( \frac{3}{4} \) in length thickly encrusting Limonitic matrix. 2x2\( \frac{1}{4} \)". £7.75; Specimen B - Lustrous, pale yellowish green sharp, well formed, crystals to \( \frac{3}{4} \) in size, thickly intergrown and encrusting Limonite. 2x1\( \frac{1}{4} \)". £2.50.

2. ANAICIME. Dene Quarry, St. Keverne, Lizard, Cornwall. A bright, snow white, well formed sharp crystal approx. \( \frac{3}{4} \) in size implanted in a cavity with small, translucent, creamy crystals of Calcite in Gabbro matrix. 2x2\( \frac{1}{4} \)". £4.50.

3. ANATASE. Norway. Superb specimens, from a new occurrence, at an undisclosed location in Norway. The specimens consist of, for the most part, well terminated, sharp, clear single crystals of rock crystal with bright, very sharp, crystals of Anatase scattered on one or more faces. The Anatase crystals range up to 5 mm. in size and are mostly doubly terminated, specimens are priced according to the amount of Anatase present from £1.25 - £5.50 each. The samples average 1\( \frac{1}{2} - 2 \)" in size.

4. NATIVE ANTIMONY. Lakeview & Star Mine, Kalgoorlie, W. Australia. Choice, rich, silvery grey metallic crystalline masses in white Quartz with odd small flecks of Native Gold. 2x1\( \frac{1}{2} \)x1\( \frac{1}{2} \)". £7.75.

5. APATITE. Colcerrow Quarry, Luxulyan, Cornwall. Well formed translucent pale sea green hexagonal crystals to \( \frac{3}{4} \)" in size, implanted and scattered on a single twinned crystal of Orthoclase with minor Gilbertite in association. 1x1\( \frac{3}{4} \)". £5.50.

6. APATITE. St. Gotthard, Ticino, Switzerland. Lustrous, transparent, colourless, hexagonal crystals to 5 mm. in size aggregated and scattered on large, creamy white, sharp, intergrown crystals of ADULARIA to \( \frac{3}{4} \)" in size, with minor Albite and Quartz in association. 2x2". £6.50.
7. **ARAGONITE.** Dufton Fell Mine, N. Appleby, Westmoreland. Select, lustrous, silky white ramifying tubose mass of interesting shape and form. $2\frac{1}{2}x2\frac{1}{2}$". £3.25.

8. **ARSENOPYRITE.** Trepa, Yugoslavia. Superb, large, sharp, bright silvery twinned crystals mostly round $\frac{1}{2}$" in size, thickly intergrown and encrusting a matrix of small white, Quartz crystals with minor brassy Pyrite and brilliant black Sphalerite crystals in association. $2\frac{1}{2}x2\frac{1}{2}$". £8.75.

9. **AZURITE.** Calumet-Arizona Mine, Bisbee, Conchise Co., Arizona, U.S.A. Bright blue masses showing concentric banding associated with green banded Malachite. The sample has been cut and polished to show the banding to best advantage. A very colourful specimen. $2\times2\frac{1}{2}$". £9.

10. **BARYTES.** Rosiclare, Hardin Co., Illinois, U.S.A. Bright, lustrous, very sharp transparent thin tabular crystals, to $\frac{1}{2}$" in size, thickly encrusting both sides of matrix with very minor creamy white Calcite. $5\times4\frac{1}{2}$". £13.

11. **BARYTES.** Frizington, W. Cumberland. Specimen A - Two, sharp, well formed translucent greyish green terminated crystals, in parallel growth, with minor attached Limonite and a faint dusting of red Hematite on one side of the specimen. $3\times2\frac{1}{4}$". £11; Specimen B - A stout, single, lustrous, translucent well terminated greyish green tabular crystal with minor creamy brown Dolomite in places. $\frac{1}{4}$" long x 2". £7.75.

12. **BARYTES.** Ale and Cakes Mine, Gwennap, Cornwall. Lustrous, translucent, slightly zoned greyish green tabular crystals, mostly around $\frac{1}{2}$" in size, thickly aggregated in parallel growth and encrusting and lining cavities in cellular Quartz with minor brassy Chalcopyrite. An interesting old specimen collected approximately in the middle of the last century. $2\frac{1}{2}x2$". £3.50.

13. **BEUDANTITE.** Wheal Carpenter, Gwinear, Cornwall. Rich crusts of sparkling olive green micro crystals on and in Quartzose gossan. $1\frac{1}{2}x1\frac{1}{2}$". £1.65.

14. **BRAZILIANITE.** Conselheira Pena, Minas Gerais, Brazil. Choice, bright, lime green, translucent to transparent, crystals showing good faces, forming an intergrown group. with no matrix. Crystal faces range up to 1" in size. $2\frac{1}{4}x2$". £11.

15. **BREPSTERITE.** Whitesmith Mine, Strontian, Argyll, Scotland. Fine, bright, creamy coloured sharp doubly terminated crystals to 5 mm. in size, thickly encrusting Calcite. $2\times1\frac{1}{2}$". £3.25.

16. **CALCITE.** Levant Mine, Pendéen, Cornwall. Choice, lustrous, creamy white rosettes of platy hexagonal crystals, mostly around $\frac{3}{4}$ - $\frac{3}{4}$" in size, thickly intergrown and encrusting Quartz veinstuff. $4\times4\times1\frac{1}{2}$". £12.

17. **CALCITE.** Elk Co., S. Dakota, U.S.A. Sharp, bright lemon yellow, well formed crystals to $\frac{1}{2}$" in size thickly encrusting matrix. This is a most unusual colour for Calcite. Specimen A - 3x2". £6.50; Specimen B - 2x1\frac{1}{2}". £3.25.

18. **CALCITE.** Blackdene Mine, Weardale, Co. Durham. Lustrous, sharp, creamy white "nail head" habit crystals mostly around $\frac{1}{2}$" in size thickly encrusting a matrix of pale slightly purplish Fluorite crystals. $6\times3\frac{1}{2}$". £6.50. A very attractive sample for display.
9. **CARMINITE.** Mina San Felix, Caborca, Sonora, Mexico. Deep red, micro crystals and masses richly lining small cavities in and impregnating Quartzose matrix, with minor yellowish earthy Beudantite in association. 2xl½x1½". £5.50.

20. **CASSITERITE.** Redmoor Mine, Callington, Cornwall. Lustrous, dark brown, well formed terminated crystals to 5 mm. in size, richly scattered and lining cavities in cellular crystalised Quartz. 3½x2½". £5.75.

21. **CASSITERITE.** Carleen Section, Great Wheal Vor, Breage, Cornwall. Very bright, small, sharp jet black crystals richly encrusting Tourmalinised Slate/Quartz veinstuff. 3x1¾x1½". £6.50.

22. **CASSITERITE.** Oruro, Bolivia. An unusual dark brown botryoidal mass showing an ill defined banding of the 'wood turn' variety, from an alluvial working in the Andes. 2½x2½". £4.50.

23. **CASSITERITE.** pseudomorph after Orthoclase. Wheal Coates, St. Agnes, Cornwall. Incomplete portions of single twinned Orthoclase crystals completely replaced by light brown Cassiterite. Most of the specimens show some good faces, and are approx. ½ - ⅛" in size. £1.65 each.

24. **CELESTITE.** Portage, Wood Co., Ohio, U.S.A. Pale blue, lustrous, tabular crystals to ⅛" in size, thickly intergrown and enclosing crystalline brown Sphalerite with minor creamy white Calcite crystals in association. 3½x2½x1½". £7.75.

25. **CERUSSITE.** Frankmills Mine, Christow, Devon. A pure mass of interlocking lustrous creamy white "jack straw" type crystals. 1½x1½x1½". £6.50.

27. **CHALCOPYRITE.** Tincroft Mine, Illogan, Cornwall. An intergrown mass of metallic grey flat tabular crystals in parallel growth associated with minor Quartz. Some of the Chalcopyrite is partially replaced by purply iridescent Bornite. 3x2¼". £8.75.

28. **CHALCOPYRITE.** Dreislar, Sauerland, Germany. Specimen A - Bright, golden, sharp sphenoidal crystals to ⅛" in size, and some showing an attractive iridescence, richly scattered over a group of large white intergrown tabular Barytes crystals. The Barytes crystals range up to 2½" in size and grade through from a white colour to a salmon pink at their bases. Superb specimen for display. 5½x4x3½". £22; Specimen B - Bright, golden, sphenoidal crystals to 5 mm. in size richly scattered over intergrown white tabular crystals of Barytes of the "coxcomb" habit. 3½x3½". £6.50; Specimen C - As Specimen B but with the Chalcopyrite crystals slightly larger and ranging up to ½" in size. 2½x1½x1½". £2.75.

30. **COLEMANITE.** Death Valley, Inyo Co., California, U.S.A. Specimen A - Lustrous, transparent, very sharp crystals, mostly around ¼" in size, thickly encrusting a cavernous area 2x1½" on matrix of massive white Colemanite. 3½x2½". £6.50; Specimen B - Very sharp, transparent crystals to 8 mm. in size thickly encrusting both sides of matrix with minor creamy Calcite in association. 1⅛x1½". £2.75.
1. NATIVE COPPER. South Cadron Mine, St. Ileer, Cornwall. Select, bright metallic platy masses of Copper thickly intergrown with fragments of white Quartz with a little blackish Melaconite in association. 4x2½x1½". £11. An interesting old specimen from one of Cornwall’s largest and richest Copper mines.

2. NATIVE COPPER. Poldory Mine, Gwennap, Cornwall. A bright, metallic pure tree like, branching, dendritic sheet 3x2½". £5.50.

3. NATIVE COPPER (Shavings). Keweenaw Pen., Michigan, U.S.A. Irregular shavings of metallic Copper. These were formed by being chiselled off a large mass of metallic Copper (as was frequently found in the mines in the Keweenaw Peninsular) by miners engaged in breaking up in situ masses of Copper too large to move. These interesting artifacts were brought from that area in the latter period of the last century. Each shaving approx. 3" long x ½" wide. £2.75 each.

4. CORUNDUM. Isiola, Kenya. A well formed stout, sharp, hexagonal single crystal showing good flat terminations, of a light purply blue colour, ⅝x⅜". £2.25.

5. COVELLITE. 3600’ Level, Leonard Mine, Butte, Silver Bow Co., Montana, U.S.A. Bright, strongly iridescent platy masses richly intergrown and embedded in massive grey Chalcocite. 3½x⅞". £5.50.

6. CHÉDRIE. Mendip Hills, Somerset. Thin, shining black, platy crystalline masses aggregated in a ⅛" area on Pyrolusite/Calcite matrix. 2x⅞". £1.65.

7. CUPRITE. Wheal Gorland, St. Day, Cornwall. Very rich, bright, deep red mass with minor greenish Malachite in association. 2¼x⅜x⅛". £2.25.

8. CUPRITE. Onganja Mine, Otavi, S.W. Africa. A large, deep red, single crystal showing some good sharp faces and mostly coated with a thin crust of green Malachite. 1⅝x⅞". £13.

9. CUPRITE variety "Tile Ore". Phoenix Mine, Linkinhorne, Cornwall. Bright red masses showing alteration rims of black Melaconite superceded by green Malachite. Specimen A - 2x⅝x⅛". £1.75; Specimen B - 1⅛x⅛". £1.25.

10. CYLINDRITE. Mina Monserrat, Oruro, Bolivia. Rich, metallic grey mass, with the strange cylindrical crystal structure for which this mineral is noted well developed, associated with very minor Pyrites. 2⅓x⅜x⅛". £17.

11. DUFORENE. Phoenix Mine, Linkinhorne, Cornwall. Dark olive green radiated concentrically banded crystalline aggregates richly encrusting hard Tourmaline/Quartz vein stuff. 3x2¼x⅛". £4.50.

12. ELSWORTHITE. Hybla, Ontario, Canada. Light brown, resinous mass associated with minor Cyrtolite and black Biotite Mica. 2x⅞". £2.75.

46. FLUORITE. Stenhouse, Weardale, Co. Durham. Fine, transparent, zoned, light apple green sharp cubic crystals mostly around \( \frac{1}{4} \) in size, thickly intergrown on light brown Siderite. Specimen A - 3x2x1\( \frac{3}{4} \)". £8.75; Specimen B - 2x1\( \frac{3}{4} \)x1\( \frac{3}{4} \)". £4.50.

47. FLUORITE. South Crofty Mine, Illogan, Cornwall. Unusual, transparent, colourless to very pale sea-green cubic crystals showing interesting etch patterns and parallel growth on their faces, and varying from \( \frac{1}{2} \) - 1" in size, thickly intergrown with needly milky crystals of Quartz and with a 2\( \frac{3}{4} \)x1\( \frac{3}{4} \)" area on one end of the sample encrusted with bright, slightly tarnished, sharp crystals of Chalcopyrite to \( \frac{1}{4} \)" in size. 5\( \frac{1}{2} \)x3". £13.

48. FLUORITE. Wheal Mary Ann, Menheniot, Cornwall. Well formed, sharp, pale green octahedral crystals mostly around 1 cm. in size, partially coated with and replaced by white Chalcedony, all encrusting massive Chalcedonic Quartz. 4x3". £8.75.

49. FRANKLINITE. Franklin, Sussex Co., New Jersey, U.S.A. Pure, bright black, lustrous mass showing one good crystal face. 2x1\( \frac{3}{4} \)x1". £2.25

50. GALENA. Force Crag Mine, Mr. Keswick, Cumberland. Small, very bright, metallic grey modified crystals, mostly around 4 mm. in size, attractively scattered over and encrusting light brown rosettes of Siderite crystals on Slate matrix. 5x3\( \frac{3}{4} \)". £6.50.

51. GOETHITE. Botallack Mine, St. Just, Cornwall. Lustrous, shining black, botryoidal and partly stalactitic mass showing an internal radiated structure where broken on edges. 3x2\( \frac{3}{4} \)x2". £7.75.

52. GOETHITE. Botallack Mine, St. Just, Cornwall. Superb, brilliant blackish, very sharp doubly terminated elongated crystals, ranging in size up to 1 cm. thickly intergrown and encrusting white Quartz. Very fine example of this mineral and an excellent display specimen. 4x4\( \frac{1}{4} \)x3\( \frac{3}{4} \)". £27.

53. GRAPHITE. Borrowdale, Cumberland. Select, pure, lustrous bright grey mass. 3\( \frac{1}{4} \)x2\( \frac{3}{4} \)x1". £2.75.

54. HEMATITE. Shallow Water Mine, Bodmin Moor, Cornwall. Choice, lustrous, deep red botryoidal mass thickly encrusting pale Amethystine Quartz on Granite. Interesting specimens of this mineral from a fairly new discovery in the heart of Bodmin Moor. Specimen A - 4x2\( \frac{3}{4} \)x2". £2.25; Specimen B - 2\( \frac{3}{4} \)x2x2". £1.75.

55. HEMATITE variety "KIDNEY ORE". Florence Mine, Egremont, West Cumberland. Very choice, bright, deep maroon coloured elongated botryoidal mass of very pleasing shape and form, and remarkably free of damage. The specimen exhibits a high degree of lustre and is of excellent shape for display. 9" long x 5\( \frac{1}{2} \)" high x 3\( \frac{1}{2} \)" wide, with all sides showing fine botryoidal structure. £17.
HEMIMORPHITE. Mina Ojuela, Mapimi, Durango, Mexico.
Specimen A - Small, transparent, very sharp terminated tabular crystals to 5 mm. in size associated with large, sharp, bright creamy white rhombic crystals of Calcite to 2" on edge, thickly encrusting Limonitic matrix. Very showy specimen 7½x5". £17; Specimen B - As Specimen A but with both the Hemimorphite and Calcite crystals being slightly larger. 4x3x2". £13.

59. MALACHITE. Bisbee, Conchise Co., Arizona, U.S.A. Choice, pure, light green radiated botryoidal mass showing interesting internal color bandings. 3x2x1½". £6.50.

60. MALACHITE. South Caradon Mine, St. Cleer, Cornwall. Select, pure, light green cellular, slightly fibrous, mass. 3x2x2". £6.50.

61. MALACHITE. Davey's Lode, Wheal Buller, Nr. Redruth, Cornwall. Pale green botryoidal masses thickly intergrown with cellular black Chalcocite and odd fragments of Quartz. 3x2x1½". £2.25.

63. META-CINNABAR. Mount Diablo, Contra Costa Co., California, U.S.A. Superb, shining black, small sharp crystals, to 2 mm. in size, thickly encrusting matrix with minor maroon colored Cinnabar in association. Specimen A - 2½x2". £11; Specimen B - 1x1" - with the crystals being slightly smaller - £2.75.

64. MIMETITE. San Pedro de Corralitos, Durango, Mexico. Choice, bright lemon yellow, botryoidal and cauliflower-like masses thickly encrusting Limonitic matrix. Specimen A - 2½x1½x1½". £4.50; Specimen B - 1½x1½". £2.75.

65. MONAZITE. Reade, Olistfold, Norway. Resinous, deep brown, pure crystalline mass. 2x1x1". £1.65.

66. NEPTUNITE. San Benito Co., California, U.S.A. Fine, very large, bright dark reddish black, sharp, terminated crystals aggregated on Serpentine matrix. The largest crystal is approx. 1" in length with another ½" in length and two others of approx. ½" and all are lying flat on the matrix. 1½x1½x1½". £11.50.

67. OLIVENITE. Wheal Gorland, St. Day, Cornwall. Light, olive green, radiated velvety crystals thickly encrusting all sides of stalactitic Limonite matrix. 2½x1½x1½". £9.75.

68. PARAGAMMELSSONITE. Cobalt, Ontario, Canada. Rich, silvery grey metallic mass with very minor Quartz and Calcite in association. 2½x1½x1½". £4.50.

69. PHARMACOSIDERITE. Wheal Gorland, St. Day, Cornwall. Small, sharp, lustrous, light green cubic crystals, mostly around 1 - 2 mm. in size, richly encrusting an area 1x1" on Gossan matrix 2x1½". £3.50.
PREHNITE. Haslach, Kinzig-Tal, Baden, Germany. Large, light apple-green well formed aggregates of curved crystals to 6" in size, thickly intergrown on cellular matrix. 2½x2x1½". £6.50.

71. PSEUDOMALACHITE. M’sessa, Katanga, Zaire. Bright, dark green, small well formed crystals richly lining large cavities in cellular massive Pseudomalachite, with minor attached matrix. 2x1". £6.50.

72. PYRITES. Quiruvilca mine, La Hibernia Dept., Peru. Brilliant, very sharp, modified cube-octahedral crystals to 1 cm. in size, forming a very attractive intergrown group. 1½x1¼". £6.50.

73. PYRITES. Wheal Jane, Kea, Cornwall. Bright, sharp, well formed OCTAHEDRAL crystals to 5 mm. in size, thickly intergrown and encrusting Slaty veinstuff. Specimen A - 1¼x1". £2.25; Specimen B - 1x1". £1.25.

74. PYRHYDROITE. Santa Eulalia, Chihuahua, Mexico. Very large, well developed, dark bronzy coloured hexagonal crystals, to 2" diameter, thickly intergrown on massive Pyrrhotite. 2½x1½x1½". £4.50.

75. PYRITES. Mt. Jon mine, Butte, Silver Bow Co., Montana, U.S.A. A single, sharp, bright deep bronzy coloured octahedral crystal, with faces approx. 5 mm. on edge, implanted on a matrix of long slender translucent, slightly milky, Quartz crystals with odd smaller pyrite crystals. 3x2½x1½". £5.50.

76. QUARTZ. Weardale, Co. Durham. A plate composed of numerous sharp, highly lustrous, transparent to slightly milky intergrown pyramidal crystals. The crystals range up to 3" in size and the specimen is completely free of damage. 4½x4". £7.75.

77. QUARTZ. Governor Valleduras, Minas Gerais, Brazil. Two very large, lustrous, dark smoky black intergrown pyramidal crystals showing sharp edges and with faces to 2" in length. 4x2½x2". £3.

78. RHODOCHROSITE. Felsobanya, Rumania. Superb, bright pink, small curved rhombic crystals thickly encrusting both sides of Quartz/Rhodochrosite matrix. Choice for display. 6x4". £23.

79. RHODONITE. Broken Hill, N.S. Wales, Australia. Bright, raspberry red, translucent to transparent tabular crystals and crystal sections thickly intergrown with bright, metallic, Galena. 2¼x1¼". £3.25.

80. SCHWARTZ. (Mercurial Tetrahedrite). GrossKogel, Schwaz, Tyrol, Austria. Well formed, modified, greyish crystals implanted on Calcite veinstuff. Specimen A - 1½x1" - with two crystals each approx. ¼" in size - £3.25; Specimen B - 1x1¼" - with one crystal approx. ¼" in size - £2.25.

81. SKUTTERUDITE. Bou Azzer, Anti-Atlas, Morocco. Specimen A - Superb, bright, silvery grey sharp crystals to 1 cm. in size, richly intergrown on massive grey Skutterudite. 2½x1½x1½". £11; Specimen B - Bright, silvery grey crystals to ½" in size, partially embedded in massive grey Skutterudite. 2x1½x1½". £6.50.

82. SMITHSONITE. Tsumeb, Otavi, S.W. Africa. Very sharp, light rose-pink elongated scalenohedral crystals to 1 cm. in length thickly encrusting cellular Galena. 2x1½x1½". £7.75.

83. SPHALERITE. Alston Moor, Cumberland. An unusual specimen consisting of lustrous black, sharp, crystals mostly around 1 cm. in size, thickly encrusting and scattered on a mass of stalactitic Siderite. 2½x2½x1½" long. £9.50.
85. SPHENIE. Capelinha, Minas Gerais, Brazil. A large, sharp, lustrous, lime green twinned translucent crystal 2 cm. in length, lying flat on Epidote rich matrix and associated with numerous smaller Sphene crystals. 2x3×1". £8.75.

86. SPODUMENE. Nr. Sally Gap, Lough Bray to Glenmacnass Rd., Co. Wicklow, Ireland. A 5 mm. sized translucent, well formed, glassy crystal implanted on a matrix of drusy white feldspar with minor Quartz on Granite. 1½×1¼". £4.50. The specimen was collected by Sir Arthur Russell in 1915 and one of his hand written labels accompanies the sample.

87. STILBITE. Seiser Alp, Trentino, Italy. Large, lustrous, creamy white sheafs of crystals and single well formed doubly terminated crystals thickly encrusting a brecciated Schistose matrix. The sheafs range in size up to ¾" in length and the single crystals are mostly around ½" in size. 4x2". £7.75.

88. STOLZITE. Brandygill Mine, Carrock Fell, Cumberland. Lustrous, creamy brown crystalline platy mass, ¾" in size, implanted on matrix of slightly iron stained Quartz, with a little apple-green Barytocalcite in association. 2x1½". £1.65.

89. TARPUIITE. Broken Hill, Zambia. Bright, small sharp transparent, colourless, crystals richly encrusting and scattered on dense cellular Limonitic matrix. Specimen A - 2¾×1¾". £7.75; Specimen B - 1½×1¼". £4.50.

90. TETRAHEDRITE. Trewethen Mine, St. Teath, Cornwall. Rich, metallic silvery grey masses intergrown in brown Siderite veinstuff with odd fragments of Slate and small masses of Galena. 2½x2½". £2.25.

91. THORGUMMITE. Tongafeno, Madagascar. Lustrous, light yellow, masses scattered in a dark Quartzose matrix with probably some other rare earth minerals present. 1½x1½". £1.65.

92. TOURMALINE variety Schorl. Kingston Down, Nr. Jallington, Cornwall. Specimen A - Shining black, rich, radiated crystallised columnar mass associated with Quartz, a little silvery Arsenopyrite and odd small masses of creamy Apatite. 3x2½x1¾". £2.25; Specimen B - A pure, shining black, radiated columnar mass 2½x1¼x1½". £1.25.

93. VANADINITE. Mibladen, Nr. Midelt, Atlas Mts., Morocco. Specimen A - Superb, large, bright red, sharp hexagonal crystals, ranging in size up to 1 cm. choiceely encrusting and scattered over a buff coloured matrix. Most of the crystals are sitting on their edges and the specimen shows excellent form and perfection. 5x2½x2¾". £33; Specimen B - Excellent, deep red, translucent, sharp hexagonal crystals to ½" in size, richly scattered on their edges over all sides of matrix. 3½x2x1¾". £16.50; Specimen C - As Specimen B but with the crystals being a slightly lighter red colour. 2x2x1½". £11; Specimen D - Choice, bright red sharp hexagonal crystals mostly around ½" in size, thickly intergrown on matrix, 1¼×1½". £5.50; Specimen E - Choice large deep orangey red single hexagonal crystals and crumpled groups, each approx.1" in size. £2.25 ea.
VESUVIANITE variety Genevite. Carriere Dalmar, Sidi Bou Othmane, Morocco. Lustrous brown, large striated crystal sections thickly intergrown and embedded in Quartz. 2½x1½". £2.75.

WITHERITE. Settlingstones Mine, Nr. Hexham, Northumberland. Well formed lustrous creamy white pseudo-hexagonal crystals, mostly around ¼" in size, thickly intergrown and lining large cavities in massive Witherite. 3½x3". £7.75.

WOLFRAMITE. Carrock Mine, Caldbeck Fells, Cumberland. Very rich, bright black, striated bladed masses thickly intergrown with white Quartz and a little creamy coloured Scheelite. 3x2½". £3.25.

WULFENITE. San Luis Potosi, Mexico. Sharp, waxy, thin transparent well formed square platy crystals, some being a pale yellowish colour, varying in size from ¼ - ½" associated with bright apple green botryoidal masses of Mimetite, white translucent crystals of Calcite and a little yellowish brown Limonite, all forming a cellular crystalised mass. A very colourful and striking specimen. 3x2¼x1½". £11.

XONOTLITE. Bin Quarry, Huntley, Aberdeen, Scotland. Specimen A - Silky white, radiated, needly crystals and fibrous masses richly encrusting a dark granitic matrix. The base of the specimen has been sawn flat. 2½x1½". £4.50; Specimen B - A 1 cm. wide vein of fibrous white Xonotlite cutting granite. 2½x1¼x1½". £2.25.

META-ZEunerITE. Wheal Edward, St. Just, Cornwall. Light green small platy crystals and crystal aggregates richly encrusting a 1½x1½" area on iron stained Gossany Quartz. 3x2x1½". £6.50.
RICHARD W. BARSTOW
26, Tregeseal, St. Just,
Near Penzance, Cornwall, England.

TEL.NO.: St. Just 880 (STD 073 677)  V.A.T. No.132-7852-67

ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and the number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 50p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

MARCH 1975

1. ADAMITE. Laurion, Attica, Greece. Lustrous, pale creamy yellow, small well formed crystals richly scattered and lining cavities in brown cellular Limonitic Gossan. Specimen A - 3½x2½x2". £4.50; Specimen B - 3x2½". £2.25.

2. ADULARIA. St. Gotthard, Ticino, Switzerland. Specimen A - A fine mass of bright, translucent, sharp glassy crystals to ½" in size, forming an interesting specimen with most of the crystals stacked one on top of the other. 3½x2x1½". £7.75; Specimen B - Sharp, bright, translucent creamy crystals, mostly around ½" in size, richly scattered over Schistose matrix. 2½x1½". £3.25; Specimen C - A very large bright, translucent crystal, approx. 1¼" in size, associated with smaller crystals and a ¾" platy crystal of creamy ALBITE. 1½x1½". £2.75.

3. ANGLESITE. Monte Poni, Sardinia, Italy. A sharp, translucent, milky coloured, well terminated crystal approx. ½" in length, associated with numerous smaller crystals on altered Galena matrix. 3x2½". £15.

4. NATIVE ANTIMONY. South Ham, Wolfe Co., Quebec, Canada. Fine, solid, silvery grey metallic mass associated with minor, creamy white, small radiated masses of VALENTINITE, traces of needly red KEMESITE and a little greyish Allemontite. 3x2x2½". £17.

5. APATITE. Tremearne Cliff, Nr. Porthleven, Cornwall. A 4 mm. sized pale, sea-green, sharp hexagonal crystal implanted on Orthoclase rich Pegmatite with odd smaller Apatite crystals and a little bladed black Tourmaline in association. 2½x1½x1½". £3.25.

6. APOPHYLLITE. Jewel Tunnel, Poona, India. Choice, lustrous, light green, sharp terminated crystals to ½" in size, thickly intergrown on an area 2½x1½", and associated with well formed tabular crystals of STILBITE to ½" in size, small whitish masses of Okenite and drusy crystals of Heulandite, on Basalt matrix. 5x2½x2½". £17.
ARAGONITE. Floristella Mine, Sicily, Italy. Superb, lustrous, creamy white, sharp terminated spear-like crystals, showing much parallel growth, to $\frac{1}{2}$" in length thickly encrusting, and free-standing on a matrix of mixed massive bright yellow Sulphur, and creamy massive aragonite. Very fine specimen for display. 5x5x4" high. £27.

8. ARSENOPYRITE. Kassandra, Chalkidiki, Greece. Small, bright, sharp elongated silvery crystals, to 4 mm. in length, richly scattered on and intergrown with slender terminated milky Quartz crystals, and odd small bright Pyrite crystals. 3x2½". £5.50.

10. AUTUNITE. Piedmont, Italy. Bright, lime yellow platy tabular crystals to 3 mm. in size, thickly intergrown and encrusting matrix. Choice for fluorescent display. 2x2". £7.75.

11. AUTUNITE. Merrivale Quarry, Dartmoor, Devon. Bright, lime yellow, micro crystals richly encrusting Granite with minor light yellow crusts of another uranium mineral, which is, as yet, unidentified. Superb fluorescence under u.v. 4½x3½". £5.50.

12. AZURITE. Copper Queen Mine, Bisbee, Cochise Co., Arizona, U.S.A. Fine, bright blue, rosettes of sharp, lustrous crystals to 1 cm. in size, richly aggregated in a 1½x1" cavity in cellular Limonite matrix, with other cavities lined with bright green fibrous crystaline Malachite and with odd scattered single Azurite crystals. 3x2½". £6.50.

13. AZURITE. Tsumeb, Otavi, S.W.Africa. A bright, sharp, well formed, deep blue terminated single crystal showing much parallel growth and associated with odd fragments of Quartz. 1" long x 1" across the axis. £6.50.

14. BARYTES. Settlingstones Mine, Hexham, Northumberland. Choice, lustrous, sharp creamy white, spear-shaped crystals mostly around $\frac{1}{2}$" in size, thickly intergrown and encrusting a dome-shaped mass of massive Witherite. Specimen shows good form for display. 6x5x3" high. £22.

15. BARYTOCALCITE. Admiralty Flats, Nentsberry Hagg's Mine, Nr. Alston, Cumberland. Well formed, sharp, tabular crystals thickly intergrown and encrusting Limestone matrix. The crystals range in size up to $\frac{1}{4}$" and are encrusted with a thin coating of white Barytes. Specimen A - 3½x2½". £7.75; Specimen B - 2x1½". £3.25; Specimen C - 1x1½". £2.25.

16. BOTALLAKITE. Botallack Mine, St. Just, Cornwall. Specimen A - Small, light green, wedge-shaped crystals thinly scattered on altered Greenstone matrix. 2x2". £1.65; Specimen B - As Specimen A - but associated with rich, light blue, micro crystaline crusts of CONELHITE. 1x1½". £2.25; Specimen C - As Specimen A - 1x1½". £1.25.

17. BOULANCHEITE. Mina Noche Buena, Zacatecas, Mexico. Choice, silvery grey, bright needly crystals thickly encrusting and lining large cavities in Pyrite/Calcite/Sphalerite veinstuff. Specimen A - 3x2½x2½". £11; Specimen B - 2½x1½x1½". £4.50.

18. BRUCITE. Ethel Mine, Mtoroshanga, Rhodesia. A pure, silky, pale green, platy crystaline mass. 4x1½". £1.65.
BRUNCKITE. South Mine, Broken Hill, N.S. Wales, Australia. Rich, pale lemon yellow, stalactitic, cauliflower-like mass, with minor inclusions of Galena. 1½x1½x1½". £3.25.

20. CALCITE. Ladywash Mine, Eyam, Derbyshire. Lustrous, translucent, well formed, scalenohedral crystals to 1¾" in size, intergrown on a matrix of pale greyish intergrown cubic crystals of Fluorite with face edges to 3¼" in size. 3x2¾". £4.50.

21. CALCITE. Charcos, San Luis Potosi, Mexico. Sharp, lustrous, creamy white, translucent hexagonal crystals to ¾" in length, and with perfect flat terminations, aggregated one on top of another and resembling a 'crank shaft' in appearance. 2½x1". £5.50.

22. CALCITE. Wynchem Mine, Bigrigg, West Cumberland. Choice, sharp, elongated transparent, well terminated crystals to 1" in length, thickly intergrown and free standing on Limonitic matrix. 2½x2½". £14.

23. CASSITERTITE. Polberro Mine, St. Agnes, Cornwall. Specimen A - Fine, sharp, bright dark brownish-black twinned crystals to ½" in size, attractively scattered over a buff-coloured Slate matrix. 2¼x1". £4.50; Specimen B - Bright, sharp, brownish-black twinned crystals to 5 mm. in size, thickly intergrown on massive Cassiterite on Slate matrix. 1½x1". £2.75. The bases of both of the above samples have been sawn flat to display them to best advantage.

24. CASSITERTITE. Imperial Goonbarrow, Bugle, Cornwall. Specimen A - Choice, sharp, complexly twinned lustrous blackish crystals to ¾" in size, thickly intergrown and encrusting partially kaolinised Granite with minor Tourmaline and Quartz in association. 3x3". £9.75; Specimen B - Bright, twinned, blackish crystals mostly around ½" in size, scattered on Granitic matrix and associated with a little needly black Tourmaline. 2x1". £4.50.

25. CASSITERTITE. Old Beam Mine, Bugle, Cornwall. Select, coarsely crystaline, lustrous brown vein section associated with minor Quartz, Tourmaline and a little creamy Topaz and Greisen walls. 3x2¼x1½" thick. £2.75.

26. CELESTITE. Agrigento, Sicily, Italy. Sharp, well formed, elongated terminated creamy coloured crystals to 1 cm. in length, richly intergrown on massive Sulphur matrix. 2½x1½". £3.50.

27. CHALCOPYRITE. Tsumeb, Otavi, S.W. Africa. Specimen A - Superb, sharp, well formed glassy twinned crystals to ½" in size, thickly intergrown on matrix and with a twinned, translucent, "sixling" crystal, in size, implanted on the other crystals. 3x2". £17; Specimen B - A choice, mostly transparent, slightly smoky sharp, glassy, tabular crystal showing good faces. 2¼x1¼". £11.

28. CHALCOCITE. Camborne Vean Mine, Camborne, Cornwall. Well formed, slightly tarnished, dull grey hexagonal crystals to ¾ mm. in size, richly scattered in cavities in Chlorite/Quartz/ Arsenopyrite veinstuff. 4x4½". £12.

29. CHALCOCITE. Camp Bird Mine, Juray, Colorado, U.S.A. Choice, bright, metallic twinned crystals to 1 cm. in size, attractively scattered over a matrix of numerous intergrown elongated terminated milky Quartz crystals, with odd masses of light brown Sphalerite. 6x2¼". £13.
31. **CHROMITE.** Prince Mine, Mashaba, Rhodesia. Pure, lustrous black, crystaline mass. An interesting sample of this important economic mineral. 2½x1½x1½". £1.65.

32. **CHURCHITE.** Sausalito, Marin Co., California, U.S.A. Rich, snow-white, micro crystallised crusts covering altered chert matrix. Specimen A - 2x1½". £1.50; Specimen B - 2x1½x1½" - not so rich as Specimen A - £2.75.

33. **CINNABAR.** Moschellandsberg, Palatinate, Bavaria, Germany. Lustrous, deep red, small well formed crystals to 2 mm. in size, richly lining cavities in brecciated matrix, with minor amounts of globular Native Mercury in association. 2x2x½". £13.

34. **CUPRITE.** Onganja Mine, Otavi, S.W. Africa. Choice, bright, metallic, sharp well formed crystals mostly around ¼" in size, thickly intergrown on granular Calcite matrix. 2½x1½x1½". £13.

35. **CUPRITE.** Wheal Unity, Gwennap, Cornwall. Bright, lustrous, dark maroon coloured octahedral crystals to 4 mm. in size, richly scattered and intergrown on cellular Quartz with minor crusts of blackish Melaconite. 3x2x2" thick. £7.75.

36. **CUPRITE.** Wheal Garland, St. Day, Cornwall. Choice, sharp, deep maroon coloured octahedral crystals to 5 mm. in size, richly scattered and intergrown on and lining cavities in cellular Quartz matrix. Fine old specimen from one of Cornwall's most famous locations. 4½x3½". £16.50.

37. **DESCLOISITE.** Berg Aukas, Otavi, S.W. Africa. Very fine, lustrous, light brown, sharp elongated spear-like crystals to 1" in size, forming a superb intergrown mass with no matrix. Specimen displays well and is an excellent cabinet sample of this mineral. 2½x2¼x1¾". £22.

38. **DOLOMITE.** Traversella Mine, Piedmont, Italy. Sharp, creamy white, translucent lustrous twinned crystals of an unusually large size. The specimen consists of two very large crystals each approx. 1½" in size, implanted on a matrix of drusy Quartz and associated with smaller Dolomite crystals around ½" in size. 3x2x1½". £17.

39. **DUFTITE.** Tsumeb, Otavi, S.W. Africa. Specimen A - Very rich, light green, thick crystaline masses encrusting a mass of intergrown light brown platy Wulfenite crystals, and one small sharp translucent rhombic crystals of Calcite in association. 3¼x2". £7.75; Specimen B - As Specimen A but without the associated Calcite - 2¼x1½". £4.50.

41. **FLUORITE.** Royal Flush Mine, Bingham, New Mexico, U.S.A. Choice, deep purple, silky, large sharp octahedral crystals to ¼" in size, thickly intergrown and encrusting matrix. This sample shows the development of the rather rare octahedral form very well. 3¼x3". £22.
43. **FLUORITE.** Naica, Chihuahua, Mexico. Select, unusual, pale sea-green, highly modified crystals aggregated in parallel growth and associated with bright, brassy striated cubic crystals of iron Pyrites to lcm. in size, small, very bright, transparent, sharp terminated crystals of Danburite and metallic masses of Galena. 2½x1¼x1½”. £7.75.

44. **FRANKLINITE.** Franklin, Sussex Co., New Jersey, U.S.A. A large, well formed, black octahedral crystal with face edges of ½” implanted on the end of a crude creamy brown crystal of Willemite, with a smaller ¼” crystal of Franklinite in association. 2x¾”. £4.50.

45. **GALENA Pseudomorph after Anglesite.** Salchendorf, Westphalia, Germany. Metallic grey, replacement of Galena after a platy tabular Anglesite crystal, with minor Iron Pyrites in association. 1¾x1½”. £2.25.

46. **GROSSULARITE variety HESSONITE.** Val d’Ala, Piedmont, Italy. Specimen A - Choice, small, very bright, transparent light orange crystals richly encrusting massive Garnet matrix and associated with transparent, sharp, well terminated crystals of DIOPSIDE to 6 mm. in length, and minor amounts of light green Clinohlore. 4½x3¼”. £13; Specimen B - Sharp, well formed crystals to ¼” in size, and of a deep orangey colour, thickly intergrown and encrusting matrix. 1¼x1½”. £7; Specimen C - Large, bright, deep orangy crystals to 8 mm. in size, intergrown on light green platy Clinohlore. 1x1½”. £5.

47. **GUMMITE.** Grafton, New Hampshire, U.S.A. A rich mass of bright, lemon yellow and orange Gummite with odd black masses of Uraninite. 1¾x1½”. £2.75.

48. **GYPSUM variety Selenite.** Imperial Co., California, U.S.A. Choice, pure, intergrown mass of large, creamy, well terminated tabular crystals to 2½” in size. Attractive for display. 5x4½x2¼”. £7.75.

49. **HETEROGENITE.** Luwiswishi, Katanga, Zaire. Rich, lustrous black botryoidal mass associated with green crusts of crystalline Malachite. 2x1¼”. £2.50.

50. **HEMIORPHITE.** La: Esmeralda Mine, Durango, Mexico. Superb, light sky-blue, well shaped botryoidal mass with minor Limonitic matrix. 3½x2½x1½”. £16.50.

51. **HEMATITE.** Rio Marina, Isle of Elba, Italy. Specimen A - Bright, shining black, sharp well formed crystals to 1 cm. in size, richly encrusting cellular matrix. 2½x1⅞x1½”. £4; Specimen B - Lustrous black, sharp, crystals to ¼” in size, with an interesting iridescence, forming a pure crystalised mass. 1x1¾”. £2.50.

52. **HAROMETONE.** St. Andreasberg, Harz, Germany. Sharp, translucent, twinned milky white crystals mostly around ½ - 5 mm. in size, thickly encrusting Sylvinite veinstuff. 2½x2½”. £8.

53. **HEUVELDITE.** Parrsborough, Nova Scotia, Canada. Lustrous, light pink, sharp crystals to ¼” in size, thickly encrusting Basalt matrix with a 1” sheaf of white crystalised Stilbite in association. 4⅞x4”. £3.75.
56. **IDOSE.** Ala Valley, Piedmont, Italy. Fine, light green, sharp well terminated crystals to \(\frac{3}{4}''\) in size, intergrown on an area \(\frac{3}{8}''\times\frac{3}{8}''\) on matrix 2x1". £3.50.

55. **INESITE.** Hale Creek Mine, Trinity Co., California, U.S.A.

Choice, light pink, lustrous terminated sharp crystals, mostly around \(\frac{1}{2}''\) in size, thickly intergrown on cellular Manganiferous matrix. This specimen is from a new find which has proved to be the finest examples of this mineral yet found. 2\(\frac{1}{4}\)x1\(\frac{1}{2}\)x1\(\frac{1}{8}\". £17.

56. **KYANITE.** Mwama, Tanzania.

A single long sharp translucent to transparent lime green lustrous bladed crystal, 3" long x \(\frac{1}{2}''\) wide. £2.50.

57. **LIBETHENITE.** Msesa, Katanga, Zaire.

Bright, deep olive green, small very sharp crystals richly encrusting Gossan matrix. 2\(\frac{1}{2}\)x2". £3.75.

58. **LUDIANITE.** Stari Trg Mine, Trepa, S. Srbia, Yugoslavia.

Well-formed, lime green, lustrous crystals mostly around 5 mm. in size, thickly intergrown with deep bluish black blades of VIVIANITE, metallic Galena and Limonitic Gossan. 2\(\frac{1}{4}\)x1\(\frac{1}{2}\)". £13.

59. **MAACHITE.** Mammoth St. Anthony Mine, Tiger, Arizona, U.S.A.

Rich, bright green, needly crystallised mass intergrown with a little lustrous creamy white Cerussite. Very colourful specimen. 3\(\frac{1}{4}\)x2\(\frac{1}{4}\)x1\(\frac{1}{8}\". £6.50.

60. **MALACHITE.** Wheel Glarland, St. Day, Cornwall.

Bright green, velvety botryoidal mass thickly covering dull grey Chalcocite. 2\(\frac{1}{8}\)x1\(\frac{1}{4}\)". £4.50.

61. **MALACHITE.** Roughtenghyll Mine, Calbeck, Cumberland.

Light green, rich, fibrous crystalline masses lining cavities in cellular Quartz. 2x1\(\frac{1}{4}\". £1.75.

62. **MASSICOT.** Arenas, Sardinia, Italy.

Rich, mustard yellow earthy masses thickly intergrown with Quartz and Cerussite with minor blue crystalline Linarite in association. 3x2x1\(\frac{1}{4}\". £6.

63. **MAUCHERITE.** Sudbury, Ontario, Canada. Pure, metallic, tarnished bronzey brown masses. Very rich examples of this somewhat rare nickel mineral. Specimen A - 2\(\frac{1}{4}\)x2x1\(\frac{1}{4}\". £4.50; Specimen B - 2\(\frac{1}{8}\)x1\(\frac{1}{8}\". £3.25; Specimen C - 2x1\(\frac{1}{8}\". £2.25.

64. **MIMETITE** variety CAMPYLITE. Drygill Mine, Calbeck Fells, Cumberland.

Very choice, lustrous, bright orange, perfect rounded barrel-shaped crystals, ranging in size from 3 mm - 5 mm. Forming a fine cellular intergrown mass with minor bladed white Barytes and a little Psilomelane. 3\(\frac{3}{8}\)x2\(\frac{1}{8}\". £17.

65. **MOLYBDENITE.** Kingsgate, N.S. Wales, Australia. Pure, bright, flexible, platy lead grey crystalline masses. Specimens varying in size from 1\(\frac{3}{8}\)x1" - 2\(\frac{1}{2}\)x1\(\frac{1}{8}\" printed from 40p - £1.25p each according to size and form.

66. **ORPIMENT.** Getchell Mine, Humboldt Co., Nevada, U.S.A.

Specimen A - Superb, bright, light orange lustrous well formed crystals to 7 mm. in size thickly intergrown and encrusting a dark matrix with minor thin crusts of Pharmacolite and traces of reddish Realgar. Extremely colourful specimen. 4x2x1\(\frac{1}{4}\". £14; Specimen B - Bright, light orange, sharp crystals to 6 mm. in size, thickly intergrown and encrusting matrix and associated with odd, bright red, elongated REALGEM crystals to 1 cm. in length. Very colourful specimen. 3x2\(\frac{1}{8}\". £13; Specimen C - Light orange sharp crystals mostly around \(\frac{4}{6}\" in size thickly encrusting matrix, with a little reddish crystalline Realgar. 2\(\frac{1}{2}\)x2". £3.
77. PENTLANDITE. Creighton Mine, Sudbury, Ontario, Canada. Select, pure, bronzey metallic crystalline mass. 2x2x1½". £4.50.

78. PREHNITE. Paterson, New Jersey, U.S.A. Choice, lustrous, lime green, translucent crystallised and botryoidal mass with very minor matrix. 2x1½". £4.50.

79. PSEUDOMORPH. Old Gunni slake Mine, Gunnislake, Cornwall. A ½" x ½" cavity in Quartz matrix completely lined with bright, dark green, small drusy crystals. The base of the specimen has been sawn flat. 2x1x1½". £2.50.

80. PYRAURYRITE. Hienda leencins, Spain. A pure, deep red, lustrous, crudely crystallised mass, with a few well developed crystal faces. 1½x1½". £6.

81. PYRITES. Guvarrano Mine, Tuscany, Italy. Specimen A - Choice, very bright, sharp well formed cubic crystals, some showing a slight curving of their faces and some showing striations, forming a pure intergrown mass. Crystals range in size from a ¾" - 2" on face edge. 4x3½". £8.75; Specimen B - As Specimen A - with the crystals ranging in size from ¼" - ½". 3½x2½". £5.50; Specimen C - Choice, bright, slightly straited, sharp cubic crystals ranging in size from ¼" - ½", thickly intergrown on massive Pyrite - 2½x2½". £4.50; Specimen D - As Specimen C - With the crystals ranging from ¼" - ½" in size. 2½x2½". £3.50.

82. PYROWUSITE. Platten, Bohemia, C.S.S.R. Specimen A - Fine, bright, steely black, bladed crystals thickly encrusting Manganiferous matrix. 4½x3½". £8.75; Specimen B - Bright, steely black, small radiated bladed crystals thickly lining cavities in Manganese matrix. 2x1½". £2.25.

83. PYROMORPHITE. Wheel Alfred, Phillack, Cornwall. Choice, very bright, transparent light yellow, sharp, hexagonal crystals to 5 mm. in size, forming a rich intergrown mass with minor fragments of Quartz. 1¾x1½". £6.50.

84. PYRRHOTITE. Morro Velho Golômeine, Ouro Preto, Minas Gerais, Brazil. Bright, light bronzey, very sharp hexagonal crystals to ¼" in size, richly scattered on their edges over a matrix of intergrown translucent, creamy white, Dolomite crystals mostly around ½" in size. 1½x1½". £7.75.

85. QUARTZ. Rampgill Mine, Nenthead, Cumberland. Lustrous, slightly milky, sharp, translucent doubly terminated pyramidal crystals to 1 cm. in size, richly scattered on and intergrown with light brown small lenticular Siderite crystals and associated with odd scattered bright black Sphalerite crystals to ½" in size, 4½x4½". £6.50.

86. QUARTZ. La Gardette, Bourg d'Oisans, Isere, France. A very fine, sharp, undamaged, water clear, perfectly terminated elongated single crystal of the Dauphine habit, from the classic location. 2½" long by ⅛" across the axis. £5.

87. QUARTZ. Goschenher Alp, Uri, Switzerland. A choice, intergrown group of large, well formed, translucent to transparent terminated smoky crystals. The crystals vary in size from ½" to 2" in length and there is only very minor damage in one place. Excellent for display. 3½x3½". £22.

88. RUTILE. Graves Mountain, Lincoln Co., Georgia, U.S.A. A crude, deep brownish red, single crystal showing a few well developed faces. 1½x2x1½". £3.25.

80. SAKURITE. Lengenbach Quarry, Binnental, Switzerland. Bright, silvery grey, slightly tarnished crystaline metallic masses richly aggregated in white Dolomite matrix with minor Pyrites and Realgar. 2½x1½x1½". £6.

81. SIDERITE. George & Charlotte Mine, Nr. Tavistock, Devon. Light brown, lenticular, botryoidal masses to 1 cm. in size, intergrown on slender terminated milky Quartz crystals with minor small crystals of Iron Pyrites on Chlorite/Pyrite/Chalcopyrite veinstuff. 3x2x1½". £4.50.

82. SIEGELITE. St. Joseph Lead District, Missouri, U.S.A. Fine, bright, silvery, sharp octahedral crystals mostly around 2 mm. in size, richly encrusting small rhombs of creamy white Dolomite on Limestone matrix, with minor Chalcopyrite and Galena in association. Excellent specimen of this rare mineral. 3x2½". £23.

83. NATIVE SILVER. Kongsberg, Norway. Choice, thick, silvery wires to ½" in length protruding from a 1½x1" fragment of Calcite veinstuff with another 1x1" fragment of veinstuff adjoined to the other by further wires of Silver. Overall size 1½x1½x1½". £27.

84. NATIVE SILVER. Broken Hill, N.S. Wales, Australia. Rich, light silvery cellular mass intergrown with white Kaolin. 2½x1½". £4.50.

85. SMITHSONITE. El Cobre, Chihuahua, Mexico. Select, lustrous, bright pink, satiny, botryoidal mass of good shape and form. 3½x1½x1½". £13.

86. SMITHSONITE. Farnberry Mine, Nr. Alston, Cumberland. Choice, lustrous, light yellowish green, cellular botryoidal mass with very minor fragments of Limonitic matrix. 2½x2½x1½". £8.

87. SMITHSONITE. Proprietary Mine, Broken Hill, N.S. Wales, Australia. Fine, satiny, lustrous creamy white elongated rounded crystals to 5 mm. in size, thickly intergrown and encrusting botryoidal Psilomelane on Limonitic Gossan. 2x2x1½". £11.

88. SPECULARITE. Florence Mine, Egremont, Cumberland. Specimen A - Very choice, bright, transparent, doubly terminated pyramidal crystals of Quartz varying in size up to ½" thickly intergrown and associated with small areas and scattered crystals of bright, shining black, platy Specularite, all on botryoidal deep red Hematite. Very showy specimen. 4½x3½". £17;
Specimen B - Bright black, large sharp platy crystals mostly around ½" in size forming a bright intergrown mass with odd pyramidal crystals of Quartz. 2½x1½". £8;
Specimen C - Bright black, small platy crystals thickly intergrown with numerous bright, translucent, doubly terminated Quartz crystals to ½" in size, on reddish Hematite. 2½x2½". £5.50.

89. SPHALERITE. Wheal Sperrys, Kea, Cornwall. Lustrous black, well formed, crystals showing interesting etch patterns and with faces to 1 cm. in size thickly intergrown with slender terminated milky Quartz crystals to 1 cm. in length on Chlorite matrix. 2½x2½". £5.

90. STIBITE. Berufjord, Iceland. Choice, silky milky white, large sheafs of terminated crystals to 1" in size and individual sharp crystals to ½" in size, thickly encrusting both sides of matrix. 4x3". £9.
META-STRENGITE. Bull Moose Mine, Juster, S.Dakota, U.S.A... Choice, light rose coloured, sharp crystals to 5 mm. in size, lining a 1" cavity in massive Rockbridgeite matrix with odd threads of metallic Iron Pyrites and other smaller cavities lined with Meta-Strengite and probably other Phosphate minerals. 3½x3½x2". £16.50.

92. TARNOWITZITE. Tsuneh, Otavi, S.W.Africa. Superb, sharp, lustrous, zoned doubly terminated hexagonal crystals to ½" in size, the colour being milky white at the terminations to colourless at the centres; thickly intergrown and encrusting cellular matrix with a little glassy crystalised Jerussite in association. 3x3x2½". £22.

93. TÖBERNITZITE. Wheal Basset, Illogan, Cornwall. Bright, light green, small well formed platy crystals richly scattered on and encrusting a cellular Quartz matrix with odd small lemon yellow platy crystals of Autunite in association. 3x3x2½". £13.

94. META-TÖBERNITZITE. Old Gunnislake Mine, Gunnislake, Cornwall. Specimen A - Bright, emerald green, platy crystals and blades to 1 cm. in size richly aggregated on a dark Limonitic Gossan. 2x2½". £9.75; Specimen B - A ½" bright emerald green bladed crystal implanted in a cavity in cellular Limonite. 2½x1x1½". £6.50.

95. TUYAMUNITE. Grants, Valencia Co., New Mexico. Small lemon yellow scaly crystals lining small cavities in Calcite/ Sandstone matrix. 2x1½x1". £4.50.

97. VANADINITE variety ENDLICHITE. Los Lamentos, Chihuahua, Mexico. Lustrous, light coffee brown, elongated hexagonal crystals to 5 mm. in length, thickly encrusting both sides of matrix with minor platy crystals of Desloisite in association. 2½x2". £7.75.

98. VANADINITE. Lligia Mine, Perranzabuloe, Cornwall. Rich, creamy yellow, masses aggregated on Greisen matrix with minor Quartz in association. 3x2". £1.65.

99. VIVLANITE. Wheal Kine, St. Agnes, Cornwall. A ½" bladed crystal mass of a dark blackish blue colour implanted on Slate/Quartz matrix, with minor small milky Quartz crystals in association. 3x2½". £3.25.

100. WULFENITE. Cuchillo Parado, Chihuahua, Mexico. Bright, light transparent yellowish small tabular crystals to 5 mm. in size, richly scattered on botryoidal light green Mimetite on cellular Gossany matrix. 2½x1½x1½". £6.50.

101. ZINCITE. Franklin, Sussex Co., New Jersey, U.S.A... Very rich, deep blood red crystalline masses thickly aggregated in creamy white Calcite matrix. 2½x2x2". £7.75.
Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

APRIL 1975

1. ACTINOLITE. Wrightwood, San Bernadino Co., California, U.S.A. Lustrous, blackish, elongated well formed crystals to 1" in length, partially embedded in and scattered through Chlorite Schist. 3½x3¼. £5.

2. ADAMITE. Mina Ojuela, Mapimi, Durango, Mexico. Choice, bright, light yellowish green sprays of crystals thickly intergrown and encrusting Limonitic matrix. 5x3". £16.50.

3. ALMADINE. Wrangell, Stikine River, Alaska. Superb, deep red, translucent crystals showing very sharp complex faces partially embedded in Mica Schist. Specimen A - 4x2½" and showing two complete crystals one being 1" in size the other ¾ in size. £11; Specimen B - showing one complete crystal in excess of ¾", 3½x2", £7; Specimen C - showing one complete crystal approx. ¾" in size; 2x1¼". £4.50. These are very select specimens showing excellent crystals and were recently collected from this very inaccessible classic location.

4. ANALCIME. Paterson, New Jersey, U.S.A. Sharp, translucent to transparent, creamy white glassy crystals to 1 cm. in size, richly scattered over Bagalt matrix. 3x2½. £8.

5. ANATASE. Binnental, Valais, Switzerland. Small, well formed, light greyish green crystals, richly scattered on and encrusting a matrix of intergrown, slightly etched, rhombic Calcite crystals. 2x2½. £6.

6. APATITE. Sandy Creek, Quebec, Canada. A sharp, well formed, large hexagonal single crystal of a brownish to olive green colour. The specimen shows good faces though the terminations are incomplete. 3" long x 1¼" across the axis. £4.50.

7. APATITE variety Francolite. Fowey Jonsols Mine, Tywardreath, Cornwall. Lustrous, small, creamy white, sharp hexagonal crystals, thickly lining a 2x1¼" cavity in Quartz/Chalcopyrite veinstuff. 3x2½. £6.

8. ARANDISITE. Stiepelmann Mine, Arandis, S.W. Africa. Pure, lime green, resinous mass with very minor Quartz. 1¼x1¼. £5.

RICHARD W. BARSTOW
26, Tregeseal, St. Just, Near Penzance, Cornwall, England.
TEL.NO.: St. Just 880 (STD 073 677) V.A.T. No.132-7852-67
10. **Atacamite**. Remolinos, Atacama, Chile. Select, dark green, platy crystalised mass, associated with very minor Limonitic matrix. 2x1\(\frac{1}{8}\)". £5.

11. **Azurite**. Broken Hill, N.S. Wales, Australia. Bright, deep blue, lustrous well formed crystals, mostly around 3 mm. in size, richly encrusting matrix with minor Cerussite and Malachite in association. 3x1\(\frac{1}{4}\)". £8.50.

12. **Azurite**. Chessy, Rhone, France. A pure, light blue, crystallised ball of Azurite, with the crystals showing a platy radiated structure. 1\(\frac{2}{3}\)x1". £7.

13. **Barytes**. Frizington, West Cumberland. Large, sharp, well formed, terminated, translucent to transparent, slightly bluish crystals ranging in size from 1" - 1\(\frac{1}{2}\)", thickly intergrown on creamy brown crystalised Dolomite matrix. A classic old sample. 5x3\(\frac{1}{2}\)". £23.

14. **Barytes**. New Glencrief Mine, Wanlockhead, Dumfries. Translucent, large, creamy white, sharp terminated wedge shaped crystals to 1\(\frac{1}{4}\" in size, aggregated in parallel growth and with no matrix attached. 2\(\frac{1}{2}\)x2". £5.

15. **Bayldonite**. Wheal Carpenter, Gwinear, Cornwall. Rich, light green, micro crystals thickly encrusting both sides of Quartz veinstuff. 2x1". £2.

16. **Bertrandite**. Carnauba das Dantas, Rio Grande do Norte, Brazil. Small, platy, creamy coloured crystals scattered on Quartz with minor Apatite and Gilbertite in association. 1\(\frac{2}{3}\)x1". £4.50.

17. **Bornite** Pseudomorph after Enargite. Stewart Mine, Butte, Silver Bow Co., Montana, U.S.A. An interesting replacement of tabular Enargite crystals by Bornite. The crystals range up to 1\(\frac{1}{2}\" in size, and are intergrown on Quartz/Pyrite matrix. 1\(\frac{1}{2}\)x1". £3.

18. **Breastite**. Whitesmith Mine, Strontian, Argyll. Specimen A - Fine, sharp, lustrous creamy white crystals to 1\(\frac{1}{4}\" in size, thickly lining a large 2\(\frac{1}{2}\) x 1" cavity in Barytes/Calcite matrix. 3x2\(\frac{1}{2}\)x1\(\frac{1}{2}\". £7.50; Specimen B - Fine, lustrous, creamy white crystals to 4 mm. in size, richly encrusting Barytes/Calcite matrix. 2x\(\frac{3}{4}\)x1". £3.25.

19. **Calcite**. Botallack Mine, St. Just, Cornwall. Choice, whitish, platy hexagonal crystals, showing an interesting slightly curved form, and ranging in size from 1" - 1\(\frac{1}{2}\", richly encrusting and scattered on translucent pyramidal Quartz crystals. 3x2". £10.

20. **Calcite**. Stank Mine, Ulverstone, N.W. Lancs. A fine group of numerous intergrown translucent to transparent "dog-tooth" habit crystals, slightly tinged a reddish colour by included Hematite. Crystals range in size up to 1\(\frac{1}{2}\". 2\(\frac{1}{2}\)x1\(\frac{1}{2}\". £7.
12. **CALCITE.** Mapimi, Durango, Mexico. Choice, bright, creamy white, platy crystals forming a cellular intergrown mass with the crystals aggregated in sprays and radiating branches. Very attractive specimen for display. 4½x2½x2½". £5.

22. **CASSITERITE.** Baleswidden Mine, St. Just, Cornwall. Rich, lustrous, black cellular mass with minor Muscovite and Quartz, and with numerous small cavities lined with small, bright, Cassiterite crystals. 3x2½x1½". £4.50.

23. **CASSITERITE** variety "Wood Tin". West Wheal Kitty, St. Agnes, Cornwall. Very choice, light brown, banded mass associated with Quartz, Chlorite and a little Chalcopyrite. 2x1½x1". £8.

25. **CHALCEDONY.** Dene Quarry, St. Keverne, Lizard, Cornwall. Small, well formed, salmon pink crystals, richly lining large cavities in gabbro matrix and associated with large, complexly formed, creamy crystals of Calcite to 1 cm. in size. 3x2½". £3.

26. **CHALCOPYRITE.** Ground Hop Mine, Grant Co., Nevada, U.S.A. Choice, brassy, sharp well-formed crystals showing interesting etch patterns and ranging in size up to 8 mm. associated with large, bright black, crystals of Sphalerite to ½" in size and slender, elongated, transparent Quartz crystals, all encrusting Quartzose matrix. The reverse of the specimen is encrusted with numerous small, sharp, Calcite crystals with odd small bright cubes of Pyrite. Very attractive specimen. 3¼x2¼x1½". £14.

27. **CHALCOPYRITE.** Levant Mine, Pendeen, Cornwall. Bright, brassy, well formed, sphenoidal crystals to ½" in size, richly scattered on a matrix of numerous intergrown translucent sharp terminated Quartz crystals, ranging in length up to 1". 2½x2½". £7.

28. **CHALCOPYRITE** variety "Blister Copper". Wheal Buller, Mr. Redruth, Cornwall. Pure, light brassy, botryoidal mass of interesting shape and form. 3x2". £4.50.

29. **CHLORITENITE.** Drakewells Mine, Gunnislake, Cornwall. Select, sparkling, coffee coloured micro crystals richly encrusting Tourmalinised Slate matrix. 4x2½". £6.

30. **CHRYSOJOLL.** Bisbee, Conchise Co., Arizona. Rich, dark greenish blue conchoideal mass associated with a little reddish Jasper and odd small drusy Quartz crystals. 3x3x2½". £5.

31. **COBALTITE.** Schneeberg, Saxony, Germany. Well formed, light grey, cubic crystals to 4 mm. in size, richly embedded in Quartzose matrix, with thin silvery crusts of Safflorite. 3x2½". £13.

32. **COLEMANITE.** Boron, Inyo Co., California, U.S.A. Fine, creamy white, transparent very sharp spear-like crystals, mostly around 1 cm. in size, thickly encrusting massive Colemanite. 2¼x1¼x1¼". £8.

33. **CUPRITE.** Wheal Gorland, St. Day, Cornwall. Pure, rich, deep red lustrous mass, associated with minor Malachite and Quartz. 2½x2x1½". £2.50.

</tr>
<tr>
<td>48.</td>
<td>FRANCKEITE</td>
<td>Poopa, Oruro, Bolivia</td>
<td>Pure, light grey, slightly fibrous, metallic mass associated with very minor Iron Pyrites. 1¼x1½x1½&quot;. £10.</td>
</tr>
</tbody>
</table>
GOETHITE. Restormel Royal Iron Mine, Lostwithiel, Cornwall. Specimen A - Bright, sharp, well formed crystals to 4 mm. in size, richly lining a 1x2" cavity in quartz/Hematite/banded Goethite matrix. 2x1x1". £5; Specimen B - Small, very bright, well formed crystals, thickly lining cavities in crystalline Goethite matrix. 1½x1¾". £2.50.

GROSSULATE variety Hessonite. Asbestos, Quebec, Canada. Sharp, well formed, transparent peach coloured crystals to 1" in size, thickly intergrown on a l½x1" area on white Arbre matrix. £5.50.

GYPSUM variety "Desert Rose". Djebel Sarhro, Morocco. Light coffee brown rose-like masses of platy crystals forming a very attractive specimen. 3x2½½". £6.

HARMOTOME. Bellsgrove Mine, Strontian, Argyllshire. Choice, lustrous, transparent, white sharp twinned crystals mostly around 1 cm. in size, thickly intergrown and encrusting Calcite matrix. Very fine example of this mineral. 5x3¾½". £18.

HEDENBERGITE. Yates Mine, Sandy Creek, Quebec, Canada. Large, deep olive green, well formed terminated lustrous crystals to 1" in length, thickly intergrown on massive Hedenbergite matrix, with minor Purplish Fluorite in association. 5x4½x3½". £14.

HELMONTITE. Rio Marina, Elba, Italy. Sharp, blackish, well formed crystals to 4 mm. in size, and showing an unusual bright iridescence, scattered on and encrusting Quartz/crystalline Hematite matrix. 2½x1¾". £4.50.

HEMIMORPHITE. Mina Ojuela, Mapimi, Durango, Mexico. Choice, lustrous, creamy white, well terminated sprays of crystals ranging in length up to ½", thickly aggregated on a cellular mass of Limonite. 3½x2". £9.

HEMIMORPHITE. Ekaterinburg, Ural Mts., Russia. Select, lustrous, translucent, well formed crystals to ½" in size, and lining a large ¼x3½" cavity in matrix 5½x5½". The specimen was collected early last century and is an excellent sample for this location. £24.

HOLLANDITE. Sorharas Mountain, Ultevis Range, Kückjökk, Sweden. Rich, greyish metallic, fibrous crystalline mass intergrown with minor quartz. 4x2½". £3.

JOAQUINITE. San Benito Co., California, U.S.A. Specimen A - Small, well formed light brown crystals, approx. 1 mm. in size, scattered over Serpentine matrix, with minor whitish Natrolite and odd lustrous reddish black elongated crystals of NEPTUNITE to ½" in size. 3x2½". £15; Specimen B - A single light brown crystal 2 mm. in size implanted on Serpentine matrix with minor whitish Natrolite. 3x2½". £3. These specimens are extremely good examples of this very rare mineral, the crystals seldom coming any larger.

LAZURITE. Badakhshan, Afghanistan. A bright blue polished slice of rich Lazurite associated with odd specks of Iron Pyrites and a little Calcite. 3½x2½". £6.50.

LEADHILLITE. Leadhills, Lanarkshire, Scotland. Small, very sharp, pearly hexagonal crystals richly aggregated and scattered on cellular matrix and associated with a little Galena, Cerussite, Mimetite and possible Lanarkite. 2½x1¾". £7.
MALACHITE. Bisbee, Conchise Co., Arizona, U.S.A. Bright, deep green rosettes of crystals, replacing azurite, thickly intergrown and encrusting Limonitic Gossan, with odd small crystals of azurite in places. Colourful and attractive specimen. 4½x2⅔". £13.50.

MALAYITE. Meldon, Devon. Rich, waxy yellow, resinous masses in Wollastonite hornfels. Strong fluorescence under short wave U.V. Specimen A - 2x2x1½". £2.50; Specimen B - 1½x1⅓". £1.50.

MARCASITE. Vintirov, Nr. Sokolov, Bohemia, S.S.R. Choice, bronzy metallic, sharp wedge shaped crystals to ½" on edge, aggregated in parallel growth with no matrix attached. 3x2". £13.50.

MATLOKITE. Cromford, Nr. Matlock, Derbyshire. Lustrous, 1 cm. sized light, creamy yellow, thick bladed crystal mass implanted on Baryte/Galena matrix. 4½x4½". £12.

METACINNABAR. New Almaden, Santa Clara Co., California, U.S.A. Rich, blackish crystals to 3 mm. in size thickly encrusting a Quartzose matrix. Choice rich example of this mineral. 3⅓x2⅔". £11.

MIMETITE. Roughtenghyll Mine, Jaldbeck Fells, Cumberland. Light, yellowish green, lustrous rounded barrel shaped crystals to 5 mm. in size, thickly encrusting white Quartz veinstuff. 4x3x3". £23.

MOLYBDENITE. Hindon Down Quarry, Calstock, Cornwall. Rich, metallic grey, platy masses encrusting Aplite matrix. Specimen A - 4x2½". £4.50; Specimen B - 3x2⅔". £2.25.

MORROLITE. Dean Quarry, St. Kerne, Lizard, Cornwall. Choice vein section consisting of divergent sprays of lustrous creamy white Natrolite crystals to ½" in length, intergrown between walls of gabbro with minor analcime and Prehnite in association. 6x3½x1½" thick. £8.

OLIVENITE. Carharrack Mine, Gwennap, Cornwall. Lustrous, olive green, well formed crystals thickly lining large cavities in cellular white Quartz. 3x2⅔". £14.

OLIVENITE. Wheal Gorland, St. Day, Cornwall. Specimen A - Dark olive green sharp crystals to 2 mm. in size lining small cavities in and scattered on cellular Quartz. 2½x1⅔x1⅔". £3; Specimen B - Small sparkling, light olive green crystals richly lining cavities in gossany Quartz. 1¾x1⅓". £1.75.

PENDLETONITE. Idria, San Benito Co., California, U.S.A. Select, silky, lemony yellow fibrous masses and radiated crystals aggregated in cavities in Opaline matrix. 2½x1½". £7.

PHOSGENITE. Monteponi, Nr. Iglesias, Sardinia. Large, well formed crystals mostly around 1 cm. in size, with a thin creamy white crust covering their faces, richly aggregated on Cerussite matrix with a little well developed reticulated massive Cerussite in association. Choice example of this rather rare Lead Chlorite, the base of the sample has been sawn flat to display to best advantage. 4½x2½". £34.

PYRARGYRITE. St. Andreasberg, Harz, Germany. Two deep red well formed lustrous crystals each approx. 5 mm. in size, implanted on a small fragment of matrix. 4½x2½". £11.
74. PYRITES. Mina Noche Buena, Zacatecas, Mexico. Bright, well-formed, modified crystals mostly around ½" in size, thickly intergrown on massive Pyrites with minor Sphalerite in association. 3½x2x1½". £8.

75. PYRITES. Quiruvilca Mine, Libertad Dept., Peru. Very bright sharp, slightly modified octahedral crystals to 1 cm. in size, forming a choice intergrown group with very minor Quartz attached. 1½x1½". £7.

76. PYRITES. Levant Mine, Penzance, Cornwall. A bright, sharp, single cubic crystal with face edges of ½" in size, with one face slightly modified where it has been attached to matrix. £1.75.

77. PYROMORPHITE. Proprietary Mine, Broken Hill, N.S. Wales, Australia. Choice, lustrous, light brown pure mass of elongated feathery crystals of excellent form. 2½x2x1½". £13.50.

79. QUARTZ. Traversella, Piedmont, Italy. Very bright, clear, well terminated crystals mostly around ⅛ - ⅜" in length, attractively scattered on and intergrown with sharp rhombs of creamy Dolomite to ½" in size, odd lenticular plates of light brown Siderite all covering a matrix of crystalline jet black Magnetite. Choice and interesting specimen for display. 3½x3½x2". £17.

80. SMITHSONITE. Tsumeb, Otavi, S.W. Africa. Lustrous, translucent, colourless, sharp slightly modified rhombic crystals, mostly around ⅛" in size, richly aggregated in groups and encrusting both sides of matrix. The main side of the specimen has areas of creamy white intergrown Willemite crystals in association. 3½x2x1½". £9.

81. SMITHSONITE. Proprietary Mine, Broken Hill, N.S. Wales, Australia. Lustrous, creamy white crystalised aggregates, of the "rice grain" form, richly scattered in large cavities in cellular stalactitic black Psilomelane. 3x2½x1½". £8.

82. SPHALERITE. Hydraulic Shaft, Smallslough Mind, Nenthead, Cumberland. Very choice, shining jet black sharp crystals to 1 cm. in size, thickly encrusting Limestone matrix. Excellent for display. 6½x3½x2½". £17.

83. SPHALERITE. New Glencrief Mine, Wanlockhead, Dumfries. A plate of large, lustrous black, well formed intergrown crystals ranging in size up to ½" on edge, with odd small creamy white crystals of Calcite scattered on it. 4x2½". £8.
85. **Sphalerite.** Trepoa, Yugoslavia. Bright, black, modified crystals to 7 mm. in size, showing interesting growth patterns associated with slender milky crystals of Quartz and a 3/8" area of intergrown creamy Calcite crystals, all on Sphalerite/Quartz matrix. 2 1/4 x 2 1/4". £6.

86. **Stephanite.** Pribram, Bohemia, C.S.S.R. Well formed, greyish crystals, mostly around 2 mm. in size, scattered on a matrix of Sphalerite/Galena with minor Iron Pyrites and pinkish Dolomite in association. 3 1/2 x 2 1/4". £16.50.

87. **Stibnite.** Felsobanya, Romania. Choice, large, radiated spray of bright, steely grey, elongated crystals, with very minor transparent plates of Barytes attached. 4 1/2" long x 2 1/4 x 2 1/4". £4.50.

88. **Strontianite.** Settlingstone Mine, Hexham, Northumberland. A 1/8" line green radiated mass embedded in massive Witherite matrix. 3 x 1/8". £3.50.

89. **Tetradymite.** Carrock Mine, Jaldbeck, Cumberland. Specimen A - Choice, bright steely grey, bladed mass 1/4" in size embedded in white Quartz. 1 3/4 x 1 1/4". £5; Specimen B - A 1/4" bladed mass embedded in Quartz. 1 3/4 x 1 1/4". £2.25.

90. **Tetratermite.** Clitters Mine, Gunnislake, Cornwall. Very rich, metallic grey crystalline masses intergrown with light brown Siderite. Specimen A - 4 x 3 1/2 x 2". £8; Specimen B - 3 x 2". £3; Specimen C - 1 1/4 x 1 1/4". £1.25.

91. **Tourmaline variety Schorl.** Haslau, Bohemia, J.S.S.R. Specimen A - Brilliant black, well formed sharp crystals to 1/4" in size, thickly intergrown on crystalline Quartz matrix. 3 x 2 1/4". £9; Specimen B - A very sharp, brilliant black, 1 cm. sized crystal implanted in a cavity in milky Quartz with odd smaller Tourmaline crystals. 2 1/2 x 1 1/4". £5.

92. **Ullmanite.** New Brancepeth Colliery, Lanchester, Co. Durham. Select, pure, metallic grey masses with no matrix attached. Specimens approx 1/4" in size £1.25 each.

93. **Uraninite.** Katanga, Zaire. Choice, black, resinous solid mass, showing a good botryoidal structure in places associated with creamy coloured, slightly granular, Monazite and with odd small plates of greenish Topbernite scattered in cavities. A most unusual specimen. 2 1/4 x 1 1/4 x 1 1/4". £12.

94. **Vallerite.** Phalaborwa, Transvaal, S. Africa. Rich, tarnished, metallic brown masses intergrown with a little Chalcopyrite, Bornite and Calcite. Specimen A - 2 1/4 x 2 1/4 x 1 1/4". £6.50; Specimen B - 2 x 1 1/2 x 1 1/4". £4.

95. **Vanadinite.** Mibladen, N. Midelt, Atlas Mts., Morocco. Superb, bright, deep orangey red perfectly formed hexagonal crystals to 8 mm. in size, thickly scattered on their edges over a light coloured matrix. Excellent for display. 5 x 3 1/2 x 2". £38.

96. **Variscite.** Hot Springs, Garland Co., Arkansas, U.S.A. Specimen A - Choice rich, bright apple green, crystalline crusts and masses richly covering white brecciated Quartz with minor Variscite in association. 3 x 2 1/2 x 1 1/4". £8; Specimen B - Choice, very rich, apple green sparkling crystalline crusts thickly covering both sides of matrix. 2 1/4 x 1 1/2 x 1 1/4". £7.
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

MAY 1975

1. ALLEMONTITE. St. Andreasberg, Harz, Germany. Very rich, silvery grey, metallic mass associated with a little Calcite and traces of silvery Safflorite. 3½x2½". £3.

2. ANALCLINE. Dene Quarry, St. Keverne, Lizard, Cornwall. A well formed lustrous white crystal 4" in size implanted in a cavity with a little crystalised Calcite in gabbro matrix. 2½x1½". £4.50.

3. APATITE. Panasqueira, Biera-Biaxa, Portugal. A choice group of well formed lustrous intergrown hexagonal crystals of a sea-green colour. The crystals range in size up to ½" and are transparent in places. 1½x1½". £11.

4. APATITE. Colecrrow Quarry, Luxulyan, Cornwall. A sharp, well formed, doubly terminated crystal 4 mm. in size, and showing an interesting colour zoning, implanted on crystalised Pegmatite matrix. Associated minerals are crystalised Orthoclase, slightly smoky Quartz and blackish Tourmaline. 2½x2". £4.50.

5. APHILLITE. Jewel Tunnel, Poona, India. Specimen A - Choice, large, translucent lustrous creamy white crystals, mostly doubly terminated, and varying in size up to ½", thickly encrusting Basalt matrix with odd blades of Stilbite. 5½x3½x2½". £17; Specimen B - Large, lustrous, transparent, glassy crystals ranging in size up to ¾", thickly intergrown on Basalt with minor creamy white Heulandite in association. 2½x2x1½". £9.

6. ARSENOPYRITE. Panasqueira, Biera-Biaxa, Portugal. A superb, pure group of very large bright, silvery, intergrown sharp bladed crystals. The crystals show much parallel growth and are mostly around 1" in size and are intergrown on a base of massive Arsenopyrite. Choice for display. 4x3x2". £38.

7. ARSENOPYRITE. Parrall, Chihuahua, Mexico. Specimen A - Very bright, silvery, sharp twinned crystals to 1 cm in size richly associated with slender crystals of Quartz enclosing matrix. 1½x2½". £9; Specimen B - Bright silvery sharp twinned crystals to 1 cm. in size, thickly intergrown and encrusting both sides of matrix. 2½x2". £7.
8. **ARTINITE.** San Benito Co., California, U.S.A. Choice, silky white, pure vein section consisting of numerous radiated needly crystal aggregates. 4x2½". £6.50.

9. **AUTUNITE.** Bessines, Haute-Vienne, France. Large, lustrous, lime-green, well formed tabular crystals to ½" in size, aggregated on an area 1½x1" on ferruginous matrix. 4x2½". £13.

10. **AZURITE.** Crol Creek, N.R. Cobar, N.S. Wales, Australia. Bright, sparkling, blue crystals mostly around 2 mm. in size, thickly encrusting white Quartz matrix. Very attractive specimen. 3x2½". £10.

11. **BAYLDONITE.** Penberthy Crofts Mine, St. Hilary, Cornwall. Rich, light green, cellular crystalline mass, intergrown with gossanry Quartz. 2x½x1½". £1.50.

12. **BORNITE.** Carn Erea Mine, Illogan, Cornwall. Small, tarnished, iridescent, cubic crystals encrusting cellular Quartzose matrix, with odd small greyish crystals of Chalcocite in association. 2x1¼x1½". £8.

13. **BOTALLACKITE.** Levant Mine, Pendeen, Cornwall. Small, dark green, tabular crystals and crystal aggregates scattered over Slate matrix. Specimen A - 2½x2¼". £4.50; Specimen B - Slightly richer than Specimen A - 1¼x1½". £2.25.

14. **BOURNONITE.** Kapnik, Rumania. Very sharp, bright silvery grey, perfect cog-wheel crystals to 3 mm. in size, scattered in cavities with small milky Quartz crystals in cellular Quartz/Sphalerite veinstuf. 3x2½x1½". £13.

15. **CASSITEHITE.** Zinnwald, Bohemia, Czechoslovakia. A single, 1 cm. sized, lustrous dark brown sharp twinned crystal implanted in a cavity in Quartz matrix with minor Apatite and Fluorite in association. The crystal shows minor contact on one face but this does not detract from the overall appearance. 2x2½x1½". £6.50.

16. **CASSITERITE.** Imperial Goonbarrow Claywork, Bugle, Cornwall. Lustrous, dark brown, sharp twinned crystals to ¼" in size, scattered in a 1x1½" cavity with rods of blackish Tourmaline in Quartz/Greisen matrix. 3x1½". £3.50.

17. **CASSITERITE variety "WOOD TIN".** West Wheal Kitty, St. Agnes, Cornwall. Rich, light brown, concentric rings and bands of Cassiterite in Quartz/Tourmaline/Chlorite veinstuf. 1½x1½x1½". £3.50.

18. **CERARGYRITE variety Embolite.** Broken Hill, N.S. Wales, Australia. Pure, olive green, cellular crystalline mass with odd fragments of attached orangey Garnet. 1¼x1½". £7.

19. **CHABAZITE.** The Storr, Isle of Skye, Scotland. Lustrous, creamy white, sharp rhombic crystals mostly around ½" in size, thickly encrusting a Basalt matrix. 2½x2". £3.25.

20. **CHALCEDONY.** North Roskear Mine, Camborne, Cornwall. Translucent waxy gum coloured stalactitic botryoidal mass of interesting shape and form on matrix of Dolomite/Chlorite. 3x1½x1½". £3.50.

21. **CHALCOPHANITE.** Tsumeb, Otavi, S.W. Africa. Superb, shining, greyish black platy crystal aggregates thickly intergrown and encrusting all sides of cellular matrix. Excellent example of this rare mineral. 3x2½x1½". £12.

22. **CHALCOPYRITE.** Fowey Jonsols Mine, Tywardreath, Cornwall. Select, pure, bronzy slightly tarnished metallic mass. This specimen was collected during the middle of the last century from one of Cornwall's richest copper mines and is an excellent ore sample. 4½x3x2". £2.50.
23. **CHALCOPYRITE.** Dreislar, Sauerland, Germany. Choice, bright, bronzey, sharp twinned crystals to 5 mm. in size, with some showing an attractive slightly iridescent tarnish, thickly scattered over creamy white large blades of crested Barytes. 5x3½". £14.

24. **CHALCOPYRITE.** French Creek Mine, Chester Co., Pennsylvania, U.S.A. Bright, bronzey, metallic skeletal crystals to ¼" in size thickly intergrown on massive Magnetite with minor Iron Pyrites in association. ¼x3½". £18.

25. **CHALCOSIDERITE.** Phoenix Mine, Linkinhorne, Cornwall. Lustrous, light green, platy crystals and crystal aggregates thickly lining cavities in dark cellular Gossan. Specimen A - 2xl½x1½". £3.25; Specimen B - 1¼x1¼". £2.25.

26. **COBALTITE.** Hakansbo, Vastmanland, Sweden. Bright, tin white, single sharp well formed crystal 4 mm. in size partially embedded in massive Pyrrhotite matrix. 3x2½x2¼". £2.25.

27. **NATIVE COPPER.** Kearsage Mine, Keweenaw Peninsula, Michigan, U.S.A. Fine, metallic, coppery ramifying crystalised, hackly mass with very minor matrix attached. The specimen exhibits good shape and shows some good crystal faces. 3½x1½x1¼". £6.50.

28. **NATIVE COPPER.** 300 Fathom level, Consolidated Mines, Gwennap, Cornwall. Choice, cellular, crystalised mass, associated with odd fragments of milky Quartz. An old label accompanies this sample. 4x3x1⅛". £13.

29. **CROCIDOLITE.** Thetford, Quebec, Canada. Select, silky, fibrous, pure vein section. 2x1⅝x1⅝" wide. Good example of this important economic mineral. £2.50.

30. **CUPRITE.** Wheal Buller, Redruth, Cornwall. Choice, cellular, mass of intergrown small bright, maroon coloured sharp octahedral crystals with a very little Quartz associated. 3x2⅘x2". £16.

31. **CUPRITE.** Poldory Mine, Gwennap, Cornwall. Small, bright, dark; maroon coloured octahedral crystals forming an intergrown cellular mass with a little Native Copper in association. 1½x1½". £4.50.

32. **CUPROADAMITE.** Tsumeb, Otavi, S.W. Africa. Fine, very bright, well formed light green elongated crystals thickly lining a ½x½" cavity in massive Tennantite with odd smaller cavities also lined with Cuproadamite. 2x1¼". £7.

33. **EPIDOTE.** Zoptau, Moravia, Czechoslovakia. Lustrous, small, sharp, olive green crystals thickly encrusting Schistose matrix. 2½x1⅞x1⅕". £4.50.

34. **ERYTHRITE.** Mount Cobalt, Selwyn Ranges, Queensland, Australia. Choice, light pinkish red aggregates of needly crystals richly encrusting matrix. 3x2⅛". £6.50.

35. **FLUORITE.** West Pastures Mine, Stanhope, Co. Durham. Bright, light apple green coloured sharp cubic crystals, mostly around ½" in size, thickly intergrown on Limestone. Some of the crystals show an interesting internal colour zoning, and most of the crystals are transparent. Specimen A - ⅝x3⅝". £13; Specimen B - 2½x2¼". £4.50.

36. **FLUORITE.** Mine le Bex, Puy de Dome, France. Select, light, turquoise blue sharp transparent cubic crystals to ⅕" in size, thickly intergrown and encrusting massive Fluorite. 3⅛x2½". £8.
37. **FRANKLINITE.** Franklin, Sussex Co., New Jersey, U.S.A. Large, very bright black, slightly rounded, crystals to ¼" in size, partially embedded in Calcite/massive Franklinite matrix. Very fine example of this mineral. 3x2¹⁄₄". £9.

38. **GALENA.** Smallclough Mine, Nenthead, Cumberland. Bright, metallic grey, modified cube-octahedral crystals, mostly around ½" in size, scattered and intergrown on Limestone matrix. 3½x3". £7.

39. **GOETHITE.** Restormel Royal Iron Mine, Lostwithiel, Cornwall. Choice, light brown, fibrous, radiated mass showing good banding. 2½x2x2". £5.50.

40. **GOLD.** McIntyre-Porcupine Mine, Timmins, Ontario, Canada. Rich, golden, platy masses scattered on and through white milky Quartz. 1½x1½x1½". £24.

41. **GROSSULARITE** variety Hessonite. Ala Valley, Piedmont, Italy. Lustrous, deep orangey brown, translucent well formed crystals to ¼" in size, richly encrusting massive Garnet matrix. Attractive specimen for display. £24.45.

42. **GYPSUM.** Girgenti, Sicily, Italy. Choice, well formed, transparent, creamy coloured elongated twinned crystals to 1" in length, thickly intergrown and encrusting a cellular matrix. Attractive specimen for display. 5x3½x2". £11.

43. **HARMOTONE.** Bellsgrove Mine, Strontian, Argyllshire. Bright, creamy white, well formed, twinned crystals to 1 cm. in size, thickly intergrown and encrusting matrix. £4.50.

44. **HEMATITE** variety Kidney Ore. Florence Mine, Egremont, Cumberland. Bright, dark reddish brown, botryoidal mass of an interesting shape, and with a high lustre. 3x2½x1½". £4.50.

45. **HEMIMORPHITE.** Mina Ojuela, Mapimi, Durango, Mexico. Sharp, elongated, lustrous transparent sprays of terminated crystals, to 1 cm. in length, associated with large creamy white sharp rhombic crystals of Calcite to ½" in size, and with minor Limonitic Gossan. 1½x1½x1½". £4.50.

46. **HEULANDITE.** Poona, India. Lustrous, pearly white well formed tabular crystals to ¼" in size, thickly encrusting Basalt. 3x2. £7.

47. **IDOCRASE.** Monte Rosso, Val d'Aosta, Piedmont, Italy. Choice, translucent, light brown elongated terminated crystals, to ¼" in length, forming an intergrown group. 1x1½x1½". £7.

48. **ISO-STANNITE.** Cliggill Mine, Perranzabuloe, Cornwall. Very rich, bluish tarnished metallic mass intergrown with milky Quartz and a little silvery Arsenopyrite. 3x3¹⁄₂". £3.50.

49. **JAMESONITE.** Treore Mine, Nr. Port Isaac, Cornwall. Rich, silvery grey, fibrous metallic mass associated with a little Quartz. Specimen A - 3½x2½x2". £5; Specimen B - 3x1¾x1¾". £3.25; Specimen C - 2x1½x1½". £1.25.

50. **JAROSITE.** Laurion, Attica District, Greece. Superb, light coffee brown, small sharp lustrous crystals thickly lining cavities in cellular matrix with a little lighter brown Natrojarosite in association. 3x3½x1½". £22.

51. **LEADHILLITE.** Redgill Mine, Jaldbeck, Cumberland. Rich, scaly, platy, pearly, translucent creamy crystals scattered on sugary Quartz. Specimen A - 2½x2x1¼". £5; Specimen B - 1½x1½". £1.50.
52. LIBETHENITE. Alentejo, Portugal. Very rich, small sharp, olive green, octahedral crystals thickly encrusting both sides of Quartz matrix. 2x1x1". £2.25.

53. MALACHITE. Wheal Gorland, St. Day, Cornwall. Light green, fibrous, silky radiated crystalline masses richly scattered over and lining cavities in cellular Limonitic Gossan. 3½x2¾". £7.

54. MANGANITE. Jackson Mine, Negaunee, Michigan, U.S.A. Choice, bright black elongated terminated crystals to ½" in length, thickly stacked in parallel growth on ferruginous matrix. 2¼x1½x1". £17.

55. MARCASITE. Cooks Kitchen Mine, Camborne, Cornwall. Bright, metallic, light bronze coloured sharp bladed crystals thickly intergrown on massive Marcasite. 2x1x1". £2.50.

56. MILARNITE. Valenciana Mine, Guanajuato, Mexico. Fine, light lime green, lustrous, sharp hexagonal crystals mostly around ¼" in size, scattered on a matrix of creamy white crystalised Valencianite. 1x1x1". £22.

57. MILLERITE. Rhondda Valley, Glamorgan, S. Wales. Select, brasssy, delicate sprays of needly crystals richly scattered on light creamy brown lenticular crystals of Siderite, lining a 2x1¾" cavity in Clay Ironstone. 2½x2x2". £10.

58. MIMETITE variety Campylite. Drygill Mine, Caldbeck, Cumberland. Specimen A - Lustrous, light mustard yellow barrel shaped crystals, mostly around 5 mm. in size, thickly intergrown on cellular black Psilomelane with a little platy Barytes in association. 2½x2x1¼". £4.50; Specimen B - As specimen A but with the Campylite crystals being slightly larger. 1½x1¼x1". £3.25.

59. MIMETITE. Driggith Mine, Caldbeck, Cumberland. Rich, light, pea green coloured small barrel shaped lustrous crystals, thickly encrusting cavernous Quartz. Specimen A - 3x2¼". £4.50; Specimen B - 2½x2". £3.25; Specimen C - 2x1½". £2.50; Specimen D - 1½x1¼x1". £1.50.

60. MIMETITE. Tsumeb, Otavi, S.W. Africa. Lustrous, light yellow, very sharp, elongated transparent to translucent crystals to ¼" in length, thickly encrusting matrix. 3x1½x1½". £7.

61. MOLYBDENITE. Carrock Mine, Caldbeck, Cumberland. Bright, metallic grey, flexible plates and masses to 1 cm. in size, scattered through Quartz/Greisen. 3x2½". £1.25.

63. OLIVENITE variety "Wood Copper". Wheal Unity, Gwennap, Cornwall. Rich, radiated fibrous, light brown bands and masses in Quartzose matrix with a ½" cavity lined with slightly velvety light olive green Olivenite. 1½x1¼x1¼". £6.50.

64. ORTHoclase. Hensbarrow Moor, St. Austell, Cornwall. A large, creamy white, Carlsbad twinned, well formed crystal completely altered to Kaolin and partially embedded in Granite. Crystal is 2½x1½" in size in matrix 3x2½". £2.25.

65. PARATAJAKITE. Levant Mine, Pendeen, Cornwall. Small, bright green, well formed crystals encrusting Hematite/Chalcocite matrix. Specimen A - 2½x2". £4.50; Specimen B - 1½x1½". £3.
66. PHARMACOSIDERITE. Wheal Unity, Gwennap, Cornwall. Small, sharp, light green cubic crystals richly scattered over both sides of ferruginous Slate. 3x2½". £5.

67. PREHNITE. Paterson, New Jersey, U.S.A. Choice, pale lime green, translucent well formed crystals to 4 mm. in size, aggregated in sheaves and thickly encrusting a cellular matrix. 2½x1¾". £6.50.

68. PSEUDOMALACHITE. Virneberg Mine, Rheinbreitbach, Germany. Rich, deep green, micro crystals and thick crusts cementing and lining cavities between fragments of white Quartz. 1¼x1½". £3.25.

69. PYRITES. Mina Noche Buena, Zacatecas, Mexico. Bright, golden, sharp, striated modified cubic crystals to 1 cm. in size, thickly intergrown on crystalline Pyrites matrix. 3x2½x1½". £7.

70. PYRITES. Wheal Jane, Kea, Cornwall. Unusual, bright, stalactitic masses of pure crystalline Pyrites somewhat resembling fingers. Specimens vary in size from 1½" X 1" to 2¼x2½" and are priced from £1.25 - £1.75 each.

71. PYROMORPHITE. Roughtengill Mine, Jaldbeck, Cumberland. Choice, lustrous, light green, well formed hexagonal crystals to 4 mm. in size, thickly encrusting and lining cavities in cellular Quartz. Specimen A - 3x2x1½". £6.50; Specimen B - 2½x2½x1¼". £3.25; Specimen C - 1¾x1½". £2.50.

72. QUARTZ. Blackdene Mine, Weardale, Co. Durham. Bright, milky white, sharp pyramidal crystals mostly around ½" in size, thickly encrusting a cubic crystal of pale greenish Fluorite. 2x2½x1½". £2.50.

73. QUARTZ. South Caradon Mine, St. Cleer, Cornwall. Bright, transparent, sharp, elongated well terminated crystals mostly around 1 cm. in length, thickly encrusting massive pale green Fluorite with a few cubic translucent crystals developed with the Quartz. 3½x2½". £6.50.

74. RENIERITE. Prince Leopold Mine, Kipushi, Katanga. Rich, slightly tarnished metallic mass intergrown with Sphalerite and a little Chalcopyrite. 2½x2½x1½". £8.

75. SERRANDITE. Desourdy Quarry, Mont - St.- Hilaire, Quebec, Canada. Salmon pink, pure bladed crystalline mass with two well formed crystals each approx. ¼" in size, developed on the specimen. 2x1¾". £7.

76. SIDEITE. Virtuous Lady Mine, Buckland Monachorum, Devon. Lustrous, light brown, well formed lenticular crystals to ½" in size, thickly intergrown and encrusting Quartz/Killass matrix. 2¼x1⅛". £9.50.

77. SMITHSONITE. Tsumeb, Otavi, S.W. Africa. Bright, pale lime green, sharp crystals ranging in size up to 6 mm. thickly lining large cavities in matrix. 2¼x1⅛". £5.50.

78. SODDYITE. Chinkolobwe, Katanga, Zaire. Choice, bright, small mustard yellow crystals, thickly encrusting Uraniferous matrix. 1¼x1¼". £12.

79. SPECULARITE. Iron Knob, S. Australia. Shining black platy crystals thickly encrusting reddish Hematite with odd doubly terminated crystals of Quartz to ½" in size implanted on the Specularite. 3½x2½". £3.75.
80. **SPHALERITE.** Ladywash Mine, Eyam, Derbyshire. Lustrous, black, crystals showing much parallel growth thickly encrusting Fluorite matrix. Specimen A - 1½x1½". £1.65; Specimen B - 1⅛x1½". £1.25.

81. **SPHALERITE.** Great Wheal Baddern, Kea, Cornwall. Dark blackish crystals to 1 cm. in size, aggregated in parallel growth on pure massive Sphalerite. 2½x2x1½". £3.50.

82. **TOPAZ.** Imperial Goonbarrow Claywork, Bugle, Cornwall. Rich, creamy white, crystalline mass with small cavities lined with small well formed crystals associated with lustrous black radiated crystalline masses of Tourmaline. 2½x2x1½". £2.25.

83. **TOURMALINE variety Schorl.** Tongafeno, Madagascar. Select, sharp, well terminated stubby crystals to ½" in diameter forming an intergrown group with very minor Quartz matrix attached. 1½x1". £3.25.

84. **TOURMALINE variety Dravite.** Yinnietarra, W. Australia. Choice, sharp, well developed large doubly terminated crystal of a deep brown colour with another crystal attached in parallel growth. 2½x2x1½". £7.75.

85. **TOURMALINE.** Cruzeiro Mine, Minas Gerais, Brazil. Well terminated transparent, bottle green, elongated single crystals. Crystals each approx. 1½" in length. £3.00 each.

86. **TURQUOISE.** Gunheath Claywork, Hensbarrow Moor, Cornwall. Light blue, micro crystals, richly scattered and aggregated on kaolinised Granite. 1½x½". £1.25.

87. **TYROLITE.** Falkenstein, Tyrol, Austria. Small, feathery light green, crystals aggregated on a 1 cm. sized area on massive white Calcite. 1½x1½". £2.25.

88. **URANINITE.** Trenwith Mine, St. Ives, Cornwall. Pure black, resinous, heavy mass with odd small included fragments of Hematized veinstuff. 1½x1½". £4.

89. **VANADINITE.** Apache Mine, N. Globe, Gila Co., Arizona, U.S.A. Fine, very sharp, bright orangey red hexagonal crystals to 3 mm. in size, thickly encrusting matrix. Specimen A - 4x3¼x1½". £9; Specimen B - 3x2". £4.50. Very attractive and colourful specimens.

90. **VANADINITE.** Mibladen, N. Mideilt, Atlas Mts., Morocco. Very choice, sharp, lustrous brownish red hexagonal crystals ranging in size up to 1 cm. diameter, thickly intergrown and encrusting matrix. 3½x2½x1½". £24.

91. **WELOGANITE.** Francon Quarry, Montreal, Canada. Pale, creamy yellow, tapering hexagonal crystals forming an intergrown mass with drusy Quartz. 1x½". £5.50.

93. **WITHERITE.** Settlingstones Mine, Hexham, Northumberland. Lustrous, creamy white, translucent crystals aggregated in parallel growth and thickly encrusting massive Witherite. Specimen A - 3x2¾". £5.50; Specimen B - 1⅛x1½". £2.25.

94. **WITHERITE.** South Moor Colliery, Lanchester, Co. Durham. Creamy white, well formed, elongated pseudo-hexagonal crystals mostly around ½" in size thickly intergrown and encrusting matrix. 2½x2x1½". £4.
95. **WOLFRAMITE.** East Pool Mine, Illogan, Cornwall. Specimen A - Choice, bright black, bladed mass traversed by thin threads of golden Chalcopyrite and a little milky white Quartz. Very rich heavy specimen. 4x2½x2". £6.50; Specimen B - Rich, lustrous black, bladed mass associated with a little Quartz and golden Chalcopyrite. 2¼x2x1½". £2.25.

96. **WOLFRAMITE.** Panasqueira, Biera-Biaxa, Portugal. Specimen A - Superb, very large, sharp, well developed terminated tabular crystal. There are some smaller crystals in parallel growth with the major crystal, and all show good terminations, bright black faces and the striations characteristic of this mineral. One side of the specimen is partially encrusted with tan coloured small lenticular crystals of Siderite with two 1" stubby Siderite crystals. 3" long x 2" wide x 2" overall depth. £4.50; Specimen B - Choice, bright black, well terminated striated tabular crystals to 1½" in length associated with large bright silvery sharp crystals of Arsenopyrite to ½" in size, and small tan coloured lenticular and hexagonal crystals of Siderite. The major Wolframite crystal stands proud of all the other crystals and the specimen is extremely attractive for display. 3½x2½x2" high. £4.50.

97. **WOODHOUSEITE.** Champion Mine, White Mts., Mono Co., California, U.S.A. Creamy white, sharp, well formed, crystals to 3 mm. in size, scattered on Quartz matrix. 2x1½". £5.

98. **META-Zeunerite.** Wheal Edward, St. Just, Cornwall. Rich, light green, small platy crystals thickly lining a 1½x3" cavity in slightly smoky Quartz veinstuff. 2½x2". £4.50.

99. **ZINNWALDITE.** Zinnwald, Bohemia, C.S.S.R. Choice, silvery, sharp, hexagonal crystal books to ½" in size thickly intergrown on Quartzose matrix with traces of purplish Fluorite. 2½x2". £7.

100. **ZIRCON.** Miask, Ilmen Mts., Russia. Lustrous, dark reddish brown, sharp doubly terminated crystals to 8 mm. in size, partially embedded and scattered on Quartz/crystaline Zircon matrix. There are at least six large crystals of Zircon on the specimen and numerous smaller ones. 1½x1½x1½". £8.
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

JUNE 1975

1. ALBITE variety PARAGLASS. Bristenstock, Uri, Switzerland. Large, whitish, lustrous twinned crystals to 1" in size, with a slight dusting of greenish Chlorite, thickly intergrown and encrusting matrix. 4x2½". £7.50.

2. ANALCIME. Paterson, New Jersey, U.S.A. Sharp, lustrous, translucent glassy crystals to 1 cm. in size, richly intergrown and scattered on Basalt matrix, with minor Calcite in association. 3x2½". £8.

3. ANATASE. Javradi, Tavetsch, Graubunden, Switzerland. Very sharp, doubly terminated, bluish black crystals to 3 mm. in size, scattered on a matrix of well formed intergrown glassy Quartz crystals with minor Albite in association. 2½x1½". £8.

4. APATITE. Panasqueira, Biera-Bixa, Portugal. A large, translucent, sharp, well formed pale lime green coloured crystal, nearly 1" in size, implanted on Quartz with odd smaller Apatite crystals and Muscovite mica. 2x1½x1½". £13.

5. APATITE. Wilberforce, Ontario, Canada. Lustrous, lime green, well formed hexagonal crystal section 1½" long x over ½" across the axis, partially embedded in Calcite matrix. 2½x2½". £12.50.

6. ARAGONITE variety "Flos-ferri". Eisenerz, Styria, Austria. Choice, silky white, tubose ramifying masses thickly intergrown and covering matrix. A very well developed example of this mineral with very attractive form for display. 4x2½". £11.

7. ARSENOPYRITE. New Rosewarne Mine, Gwinear, Cornwall. Rich, bright, silvery mass composed of numerous sharp twinned crystals, ranging in size up to ½", intergrown with massive Arsenopyrite. 3x1½x1½". £4.50.

8. ARSENOPYRITE. Penlee Quarry, Newlyn, Cornwall. Bright, silvery, sharp twinned crystals to 1 cm. in size, thickly intergrown and lining a 1½x1½" cavity in Quartz. 2½x1½x1½". £4.50.

9. ATACAMITE. Remolinos, Atacama Desert, Chile. Bright green crystalline mass associated with a little reddish Hematite. 2x1½x1". £1.50.
10. AUGITE. Bancroft, Ontario, Canada. Large, well formed, slightly etched crystals to 1" in size and of a greyish green colour, forming an intergrown mass on matrix. Some of the crystals show good terminations. 4½x2½x2". £6.50.

11. AUSTRALITE. Gold Hill, Tooele Co., Utah. Lustrous, well formed, very pale green sprays and aggregates of crystals richly scattered on ferruginous matrix. 2¼x1¼x1". £4.50.

12. BARYTES. New Glencrieiff Mine, Wanlockhead, Dumfries. Creamy white, sharp crystals to 1 cm. in size, scattered and aggregated on a matrix of lustrous intergrown pyramidal Quartz crystals. The specimen shows interesting shape and attractive form. 3½x3x2". £6.50.

13. BARYTES. Crowgarth Mine, Cleator Moor, Cumberland. Lustrous, zoned, pale bluish white crystal ½" in size, implanted on Dolomite matrix with odd smaller Barytes crystals and drussy Calcite crystals. 2½x1½". £5.

14. BARYTOCALSITE. Admiralty Flats, Nentsberry Hags Mine, Nenthed, Cumberland. Select, creamy coloured, sprays and rosettes of spear shaped crystals, with a thin dusting of whitish Barytes, richly intergrown and scattered on Limestone with minor Calcite in association; the crystal sprays of Barytocalcite range in size up to ¼". 4x3½x1½". £11.

15. BARYTOCALSITE. Blagill Mine, Nr. Alston, Cumberland. Choice, transparent to translucent elongated terminated crystals to ½" in length thickly encrusting cellular matrix. 1½x1½". £1.75.

16. BEUDANTITE. Wheal Carpenter, Gwinear, Cornwall. Rich crusts of micro pale olive green crystals encrusting and lining joints and cavities in cellular Quartz Gossan. Very rich example of this mineral. 3x2½x2½". £6.50.

17. BOULANGITE. Stari-Trg Mine, Trepa, S. Serbia, Yugoslavia. Bright, silvery grey, needly crystals thickly encrusting and lining cavities in crystalised Calcite matrix with minor Quartz and Sphalerite in association. 3½x2x1½". £7.

18. BREWSTERITE. Whitesmith Mine, Strontian, Argyllshire. Choice, sharp, well formed glassy crystals, mostly around 4 mm. in size, thickly encrusting Calcite/Biotite Schist matrix. 2x2½x2½". £3.50.

19. BUSTAMITE. Zinc Corp. Mine, Broken Hill, N.S. Wales, Australia. Large, slightly rounded, salmony pink crystals to 1" in size, forming an intergrown mass and associated with a little Calcite, Sphalerite and reddish Spessartite Garnet. 2½x1½x1½". £9.

20. CALCITE. Cromford, Nr. Matlock, Derbyshire. Specimen A - Choice, large, well formed translucent, doubly terminated scalenohedral crystals ranging in size up to 4" long attractively intergrown and associated with a little altered Limestone. Choice for display. 6½x5½x5" high, £23; Specimen B - Fine, very sharp, well formed scalenohedral and 'dog-tooth' habit crystals mostly around ½ - 1" in length, thickly intergrown and encrusting all sides of a fragment of Limestone. 3½x2½x2½". £14.50; Specimen C - A group of lustrous translucent scalenohedral crystals to 2½" in length, aggregated in parallel growth with very minor matrix attached. 3½x2x1½". £5.50. All the above specimens were collected early this century and are excellent for display - the crystals for the most part being of a light honey colour.

22. **CARPHOLITE.** Schlaggenwald, Bohemia, C.S.C.R. Choice, straw coloured, thick, fibrous radiated crystaline masses encrusting Greisen matrix. 2½x1⅛x1⅛". £6.50.

23. **CASSITERITE.** Lady Gwendoline Mine, Germoe, Cornwall. Bright, blackish, well formed crystals to ¾" in size, thickly intergrown and scattered on Chlorite/Chalcopyrite/Gilbertite veinstuff. 2¼x2¾". £5.50.

24. **CASSITERITE.** Poldice Mine, Gwennap, Cornwall. Small, bright, brownish black sharp crystals mostly around 2 - 3 mm. in size, richly scattered over cavernous Quartz/Tourmaline veinstuff. 2⅛x2⅛". £4.75.

25. **CASSITE1ITE.** Cligga Mine, Perranzabuloe, Cornwall. Select, well formed, large, blackish brown twinned single crystals. The crystals show good faces and have very minor Sericite mica attached. The crystals each approx. ¾x⅜" in size - £1.25 each.

26. **CEHUSITE.** Tsumeb, Otavi, S.W. Africa. Fine, sharp, glassy translucent twinned crystals to ¾" in size, aggregated on their edges on cellular matrix with minor olive green micro crystals of Duftite. 2⅞x1⅛". £6.50.

27. **CEHUSITE.** Pentire Glaze Mine, St. Minver, Cornwall. Rich, creamy white, elongated "Jack-straw" type crystals thickly scattered and aggregated on ferruginous gossany Quartz. 2⅝x1⅜x1½". £5.

28. **CHALCEDONY.** North Roskear Mine, Camborne, Cornwall. Light coffee coloured translucent botryoidal and tubose mass partially frosted with drusy Quartz crystals on Dolomite/Chalcopyrite matrix. 2½x⅜". £2.50.

29. **CHALCOPYRITE.** Great Wheal Tolgus, Helston, Cornwall. Bright, metallic, golden, complexly twinned platy crystals mostly around ¾" in size, richly scattered over a crust of small brown Siderite crystals covering Quartzose veinstuff. Interesting and unusual form for this mineral the specimen being collected during the last century. 3¾x3¾". £9.

30. **CHALCOPYRITE.** Wheal Buller, Nr. Redruth, Cornwall. Bright, golden, twinned sphenoidal crystals to 5 mm. in size, richly scattered over a cellular Quartz/Chalcopyrite matrix. 2⅛x1⅛x1⅛". £4.50.

31. **CHILDRENITE.** Drakewalls Mine, Gunnislake, Cornwall. Rich crust of sparkling micro coffee coloured crystals covering Tourmalinised Slate. Specimen A - 2¾x2¾". £3.50; Specimen B - 1⅛x1⅛". £1.25.

32. **CHURCHITE.** Nitzelbuch Mine, Auerbach, Bavaria, Germany. Snow-white, radiated, needly spherules aggregated on Limonitic matrix. 1⅛". £5.50.

34. **NATIVE COPPER.** Tolcarne Mine, Camborne, Cornwall. Choice, cuppy red cellular crystaline mass associated with minor fragments of Quartz. 3x1½x1½". £4.50.
35. NATIVE COPPER. Tiddys Cross-Jourse, United Mines, Gwennap, Cornwall. Choice, coppery crystalline plate with unusual ridges and parallel lines showing the bedding of the Slaty matrix in which the specimen formed, and with odd fragments of Quartz attached. 5x2x½". £12.

36. CORUNDUM. Beitbridge, River Limpopo, Rhodesia. Well formed, complete, hexagonal crystal of a reddish brown colour. l¼xl1" across the axis x ¾" in length. £2.25.

37. COSALITE. Cariboo Goldmine, Wells, British Columbia, Canada. Very rich, silvery grey, radiated and bladed masses thickly aggregated in white Quartz with odd small specks of Native Gold. 2x¼xl¼". £11.

38. CRYOLITE. Ivigtut, Arksuk Fiord, Frederikshaab District, S. Greenland. Choice, transparent, well formed cubic crystals to 1" in size, thickly intergrown on massive Cryolite and with odd small well formed crystals of Pachnlolite and Thomsenolite scattered on the crystals. 2x2x¼". £13.

39. CUPRITE. Carn Brea Mine, Illogan, Cornwall. Rich, bright maroon coloured cellular masses composed of well formed octahedral crystals and crystalline masses of Cuprite intergrown with a little Quartz and Native Copper. Specimen A - 2x2x2½". £8.75; Specimen B - 2½x2x1½". £7.00; Specimen C - l¼xl1". £1.75.

40. CUPRITE. Countybridge Quarry, Lizard, Cornwall. Select, deep red, thick massive vein section showing an interesting, almost dendritic, structure associated with a little Chrysocolla and Malachite between walls of dark Serpentine. 3x2xl½" thick. £4.50.

41. DATOLITE. Bergen Hill, New Jersey, U.S.A. Bright, transparent, sharp crystals to 1" in size, thickly intergrown and encrusting matrix with a large l¼" radiated mass of creamy white Pectolite implanted on the Datolite. 3x¼xl½". £6.50.

42. DIOPTASE. Tsumeb, Otavi, S.W. Africa. Specimen A - Very choice, lustrous, bright emerald green sharp crystals, the largest being over ½" in size, thickly intergrown and lining a 2x2¼" cavity in massive Diopside/Calcite matrix with minor Cerussite in association. Superb specimen for display. 3¼x2½x2½". £37; Specimen B - Choice, bright emerald green, sharp crystals to 1 cm. in size, thickly intergrown on a l¼xl1" area on cellular Quartz/Calcite matrix with rich crusts and masses of light sky-blue PLANCEITE in association. 2½x1x1½". £13; Specimen C - Small, sparkling, bright emerald green crystals thickly scattered over and encrusting intergrown rhombic crystals of Calcite. 2x¼x1½". £5.25.

43. DUFORENE. Phoenix Mine, Linkinhorne, Cornwall. Rich, deep olive green, radiated circular masses to 1 cm. in diameter, encrusting Tourmaline/Quartz veinstuff. 3x2½x2½". £5.

44. EPI DOTE. Monte Rosso, Val d'Aosta, Piedmont, Italy. Bright, transparent, yellowish green, sharp terminated crystals to 5 mm. in size, thickly scattered on matrix with odd small well formed crystals of Diopside in association. 2x1½". £4.50.

46. FLUORITE. Caravia Mine, Asturias, Spain. Choice, light purple, translucent to transparent, sharp cubic crystal showing unusual etched bevelled edges implanted on fragment of matrix. 3x2xl¼" - with the crystal being l¼xl¼xl¼" in size. £13.
47. **GALENA.** Herodsfoot Mine, Lanreath, Cornwall. Metallic grey well formed, modified cubic crystal with 1" faces implanted on a matrix of intergrown bright milky Quartz crystals. £7.50.

49. **GARNET variety ALMANDINE.** Zillertal, Austria. Fine, very large, sharp, deep brownish red crystals to 1" in size, scattered on and partially embedded in Chlorite Schist. There are over 10 large crystals on the specimen which is excellent for display. 7lx4x2¼". £22.

50. **Gmelinite.** Megharamourne, Co. Antrim, N. Ireland. Sharp, well formed salmon pink crystals to 5 mm. in size, richly encrusting cellular Basalt matrix. 1⅛x1⅛". £2.50.

51. **Goethite.** Botallack Mine, St. Just, Cornwall. Choice, pure, shining brownish black mass composed of numerous rounded botryoids and showing radiated structure where broken open. Attractive and interesting specimen from this classic location. 2½x2½". £8.

52. **Goethite.** Wheal Owles, St. Just, Cornwall. Bright, greyish black well formed crystals thickly lining a 1½x1½" cavity in Quartz/massive Goethite matrix. 1½x1¼". £2.50.

53. **Garnet variety KIDNEY ORT.** Hodbarrow Mine, Ulverstone, N. Lancs. Select, lustrous, blackish dome shaped botryoidal mass showing excellent form. This specimen was collected in the 1930's from this famous old mine. 4x2½x3½"high. £11.

54. **Hematite.** Shallow Water Mine, Bodmin Moor, Cornwall. Lustrous, deep red, botryoidal mass thickly encrusting pale Amethystine Quartz. 3x2½". £1.50.

55. **Hematite variety KIDNEY ORT.** Hodbarrow Mine, Ulverstone, N. Lancs. Select, lustrous, blackish dome shaped botryoidal mass showing excellent form. Very fine, bright, lustrous creamy white large sprays of sharp terminated crystals ranging in size up to 3" in length, thickly encrusting Limonitic matrix. 4x2½". £16.50.

56. **Hemimorphite.** Mine 8a Duchessa, Domosnovas, Sardinia. Bright, sky blue, botryoidal crystalline mass covering and lining cavities in matrix. Very attractive specimen. 3⅛x2½". £7.50.

57. **Leadhillite.** Leadhills, Lanarkshire, Scotland. Rich, pearly white platy masses intergrown with massive Cerussite and minor gossany matrix. Specimen A - 1⅛x1⅛x1½". £3.50; Specimen B - 1⅛x1⅛". £2.25.

58. **Linarite.** Redgill Mine, Caldbeck, Cumberland. Bright blue, small, well formed, crystals richly lining cavities in Quartzose matrix with minor Cerussite in association. 1½x1½". £1.75.

59. **Malachite.** Roughtengill Mine, Caldbeck, Cumberland. Rich, bright green, radiated fibrous 'wart' like masses thickly covering both sides of Gossany Quartz matrix. 3x2". £4.50.
61. MALACHITE. Copper Queen Mine, Bisbee, Conchise Co., Arizona, U.S.A. Choice, bright green, pure radiated, cavernous, crystalised mass with very minor areas of brownish Limonite. Extremely rich and colourful 'old time' specimen. £17.

62. MALAYAITE. Meldon, Devon. Very rich, waxy yellow masses thickly aggregated in Wollastonite hornfels. Bright fluorescence under short wave u.v. £3.50.

63. MIMETITE. Mexico Mine, Caldbeck, Cumberland. Bright, yellowish green, rounded barrel shaped crystals to 4 mm. in size, thickly aggregated on a ⅜ area on Gossany Quartz. £3.

64. MIMETITE. Tsumeb, Otavi, S.W. Africa. Choice, lustrous, bright yellowish sprays of elongated spiky crystals, with individual sprays attaining ½ in size, thickly scattered over a matrix of crystalised Calcite with odd dendrites of Native Copper. The reverse of the specimen consists of large rhomnic creamy Mimetite crystals frosted over with light creamy yellow needly Mimetite crystals. £22.

65. MOLYBDENITE. Wolfram Camp, Queensland, Australia. Rich, bright, metallic lead grey sheaves of platy crystals, some showing hexagonal outlines and ranging in size up to 2" across, thickly aggregated in Quartz matrix. £11.

66. MURDOCHITE. Mina Ojuela, Mapimi, Durango, Mexico. Sparkling, light brown, aggregates of micro crystals thickly scattered over cellular Limonitic matrix with small radiated masses of turquoise blue Aurichalcite in association. 2½x2". £7.

67. NEPTUNITE. Gem Mine, San Benito Co., California, U.S.A. Fine, bright, reddish black, sharp elongated terminated crystals to ½" in length richly intergrown and scattered on Serpentine matrix with a small well formed light brown Joaquinite crystal associated. 2½x2½". £17.

68. OLIVENITE. Wheal Gorland, St. Day, Cornwall. Large, bright olive green, sharp terminated stubby crystals to 4 mm. in size, scattered in cavities in cellular leached granitic matrix. 3x2½". £5.50.

69. ORTHoclase. Longdowns, Carnmenellis, Cornwall. A large, well formed and terminated light salmon coloured crystal approx. 3¼x2½" long protruding from Pegmatite matrix with minor creamy white Albite and Quartz in association. 2x2¼". £2.50.

70. PHLOGOPITE. Wilberforce, Ontario, Canada. A sharp, hexagonal, light brown, lustrous crystal book ⅛ in size implanted on a block of cleaved creamy white rhombic Calcite. ½x1¼x1¼". £3.25.

71. PREHNITE. Paterson, New Jersey, U.S.A. Choice, pale lime green, doubly terminated well formed crystal aggregates, mostly around ¼" in size, scattered over Basalt matrix. 2½x2½". £3.50.

72. PURPURITE. Karibab, S.W. Africa. Pure, brownish black mass with lavender coloured surfaces. 1½x1¼". £1.25.

73. PYRITES. Mina Noche Buena, Zacatecas, Mexico. Choice, very bright, striated modified cubic crystals, mostly around 5 mm. in size, thickly encrusting matrix with minor creamy Dolomite, brownish Sphalerite, Galena and Chalcopyrite in association. 4x2½". £8.
PYRITES. Wheal Mary Ann, Menheniot, Cornwall. Select, bright, golden modified cube-octahedral crystals richly intergrown and scattered on milky white pyramidal Quartz crystals. Specimen A - 3x2x1½". £2; Specimen B - 1½x1x1½". £3.25.

PYROMORPHITE. Wheal Goat, Brittany, France. Pure, lustrous, light brown sprays of elongated crystals forming a cellular intergrown mass. Very rich specimen from this classic old location. 2x2x1½". £1.

PYROMORPHITE. Leadhills, Lanarkshire, Scotland. Light green, well formed, small hexagonal crystals richly scattered over Quartzose veinstuff. £1.25.

PYROMORPHITE. Florence Mine, Egremont, Cumberland. Specimen A - Lustrous, transparent to translucent, sharp, doubly terminated, smoky crystals to 1" in size, intergrown on matrix with minor Specularite and Calcite in association. 2x1½x1½". £4.50; Specimen B - Select, large, sharp transparent to translucent single smoky crystals showing excellent faces, some have minor Specularite attached. Crystals each approx. 1½x1½x1½" in size. £1.25 each.

QUARTZ. Groverake Mine, Nr. Rookhope, Co. Durham. Choice, very bright, large sharp translucent, perfectly formed pyramidal milky crystals to 1½" in size, thickly intergrown on massive Quartz. Excellent specimens for display. Specimen A - 7x6½", £1; Specimen B - 6x5". £3.

RHODONITE. Franklin, Sussex Co., New Jersey, U.S.A. Very rich, bright pink, slightly rounded large crystals and crystal masses, thickly intergrown with a little Calcite and blackish Franklineite. 2½x1½". £9.

SAMKESITE (Plumbian Betafite). Williamsons Prospect, Nr. Yinnietharra, W. Australia. Pure, vitreous, light brown, masses with very minor matrix attached. Specimens approx. 1x1½". £1.25 each.

SIDERITE. Herodsfoot Mine, Lanreath, Cornwall. Choice, light brown large lenticular crystals attractively intergrown and encrusting Quartz matrix. The Siderite is, itself, partially covered with a crust of small creamy white Dolomite crystals on which are implanted odd bright, dark brown, crystals of Sphalerite to 1 cm. in size. 3½x2½x1½". £7.50.

NATIVE SILVER. Cobalt, Ontario, Canada. Very fine, bright, silvery thick sheet like mass with odd adhering fragments of Calcite and an attractive iridescence in places. 4x1½" and ranging from ½-¼" thick. £23.

NATIVE SILVER. Minnesota Mine, Keweenaw Pen., Michigan, U.S.A. Pure, bright, silvery hackly mass with odd small fragments of adhering Quartz. 1½x1½". £5.

SMITHSONITE. Tsumeb, Otavi, S.W. Africa. Bright, light honey coloured, sharp rhomboic crystals to 1 cm. in size, thickly intergrown and completely encrusting matrix. Specimen A - 4½x3½x2½". £14.25; Specimen B - with traces of bluish Linarite - 3x2½x1½". £7.75.

SPHALERITE. Coalclough Mine, Nr. Nenthead, Cumberland. Lustrous, bright black, sharp crystals to 2" in size, richly scattered over a drusy crust of Quartz crystals showing cubical casts of a mineral which has since been leached away. 3½x2½x1½". £6.50.

SPHALERITE variety SCHALENBLende. Pribram, Bohemia, J.S.S.R. Choice, light brown, very well banded mass with odd threads of metallic Galena. Very good example of this unusual variety. 2½x2½". £4.50.
87. STANNITE. East Pool Mine, Illogan, Cornwall. Rich, metallic, slightly tarnished mass intergrown with bright black bladed masses of Wulfenite, golden Chalcopyrite and a little Quartz and Fluorite. \(2\frac{1}{2}\times2\frac{3}{8}\times1\frac{3}{4}\)". £5.

88. STILBITE. The Storr, Isle of Skye, Scotland. Lustrous, creamy white, well formed terminated crystals, mostly around 1 cm. in size thickly intergrown and encrusting matrix. \(3\frac{1}{2}\times2\frac{3}{8}\times1\frac{3}{4}\)". £3.50.

89. METALLIC TIN. Mellancar Smelting Works, Hayle, Cornwall. An interesting silvery metallic convoluted mass of smelted tin taken from the smelting works during the last century. \(5\frac{1}{2}\)" long x 1\(\frac{3}{4}\)"x1". £7.

90. TOURMALINE. Karibab, S.W. Africa. Lustrous, deep green, columnar crystal mass of varying colours partially embedded in milky Quartz. \(3\frac{3}{4}\times2\times1\frac{1}{4}\)". £3.50.

91. TOURMALINE variety DRAVITE. Yinnietharra, W. Australia. Bright, dark brown, well formed doubly terminated crystals to \(\frac{1}{4}\)" in size, scattered and partially embedded in Muscovite Mica Schist. \(3\times2\times1\frac{3}{4}\)". £4.50.

92. URANOCIRCITE. Bergen, Nr. Falkenstein, Saxon, Germany. Bright, light yellowish green, platy crystals scattered on and in crystallised smoky Quartz matrix. \(2\times1\frac{1}{2}\times1\frac{1}{4}\)". £6.50.

93. VESUVIrite variety GENIVITE. Carriere Dalmar, Sidi Bou Othmane, Morocco. Lustrous, light brown, bladed striated crystals and crystal sections intergrown with and partially embedded in Quartzose matrix. \(2\frac{3}{8}\times1\frac{3}{4}\)". £3.

94. WAVELITE. High Down Quarry, Filleigh, Devon. Rich, creamy coloured, fibrous radiated masses and spherules encrusting both sides of a dark slate matrix. \(1\frac{1}{2}\times1\frac{1}{2}\)". £1.25.

95. WILLEMITE. Franklin, Sussex Co., New Jersey, U.S.A. Superb, rich, light lime green coloured granular mass associated with much black Franklinite and a large area of white Calcite, and a little reddish Zincite. Brilliant green/red fluorescence under u.v. light, and an unusually rich specimen. \(4\times2\frac{1}{4}\times2\frac{1}{2}\)". £9.

96. WITTIKENITE. Daniel Mine, Wittichen, Schwartzwald, Germany. Rich, slightly tarnished, metallic, bladed crystals and masses thickly aggregated in Calcite/Barytes matrix with minor Emplectite in association. \(3\frac{3}{4}\times2\)". £11.

97. WOLFRAMITE. Quick's Shaft, Poldice Mine, Gwennap, Cornwall. Rich, black, bladed mass associated with minor creamy Fluorite. \(2\times1\frac{1}{2}\times1\frac{1}{2}\)". £1.25.

98. WULFENITE. Tsumeb, Otavi, S.W. Africa. Superb, sharp, well formed bladed crystals of a light brownish colour, with most of the crystals being around \(\frac{1}{4}\)" in size, thickly encrusting both sides of matrix. The crystals are, for the most part, free standing and one side of the specimen has a slight dusting of micro Duftite crystals. \(4\times3\frac{1}{2}\)". £23.

99. WULFENITE. Los Lamentos, Chihuahua, Mexico. Bright, burnt-orangey coloured tabular crystals ranging in size up to 1 cm. thickly intergrown and encrusting Dolomite matrix. \(4\times2\frac{1}{2}\)". £8.
JULY 1975

1. ADULARIA. St. Gotthard, Ticino, Switzerland. A group of large, sharp, lustrous, translucent creamy white crystals. The largest crystal has crystal faces 1½" in size and the specimen consists of three major crystals with several smaller ones attached. On the base of the specimen, and on one face of each of the large crystals there are scattered small, creamy coloured Albite crystals. 3x2½x2" high. £12.

2. ANGLESITE. Broken Hill, N.S. Wales, Australia. Choice, lustrous, small sharp crystals to 3 mm. in size, thickly encrusting a mass of reticulated creamy white Cerussite. 2½x2½x1½". £14.

3. APATITE. Cerro de Mercado. Durango, Mexico. Fine, transparent, sharp well formed, elongated terminated crystals and crystal sections, to ½" in size, scattered and protruding from cellular Chalcedony matrix. 3½x2". £14.

4. ARSENOPYRITE. Parral, Chihuahua, Mexico. Large, bright, silvery, sharp twinned crystals to ½" in size, thickly intergrown and encrusting Sulphidic matrix, with odd elongated crystals of Quartz. Very choice for display. 5x4". £23.

5. ARTHURITE. Himgston Down Mine, Nr. Callington, Cornwall. Rich, light apple green, crystalline crust covering granitic matrix. 2x1¼". £1.25.

6. AUTUNITE. Merrivale Quarry, Dartmoor, Devon. Rich, lime green, crust of small intergrown crystals thickly covering Granite. Excellent fluorescence under u.v. lamp. Specimen A - 3⅝x2⅛". £4.50; Specimen B - 2x1½". £2.25; Specimen C - 1¼x1¼". £1.25.

7. AZURITE. Bisbee, Conchise Co., Arizona, U.S.A. Select, ball-shaped mass, of platy blue Azurite crystals with some areas replaced by green Malachite. Very colourful and attractive specimen. 2x1¾x1¾". £7.

8. BANNISTERITE. Zinc Corp. Mine, Broken Hill, N.S.Wales, Australia. Choice, flat, bladed brownish black crystal mass with minor Rhodonite attached. Very good specimen of this very rare mineral. 2x1⅛". £7.
9. **BARYTES.** Settlingstones Mine, Hexham, Northumberland. Choice, lustrous, creamy white well formed bladed crystals mostly around \( \frac{1}{4} \) in size, completely encrusting a large dome shaped mass of Witherite. The specimen displays well and is of excellent form. \( 5\times4\times3'' \) high. £24.

10. **BAYLDONITE.** Wheel Carpenter, Gwinear, Cornwall. Rich, light green, crust of micro crystals covering Quartzose Gossan. \( 2\times1\frac{1}{4}'' \). £2.50.

11. **BRENNITERITE.** Whitesmith Mine, Strontian, Argyllshire. Bright, translucent, sharp perfectly formed creamy white crystals mostly around 3 - 4 mm. in size, thickly encrusting matrix. Specimen A - \( 3\times2'' \). £7; Specimen B - \( 2\times1\frac{1}{4}'' \). £3.50.

12. **CALCITE.** Botallack Mine, St. Just, Cornwall. Fine, translucent, large, sharp, creamy coloured blocky crystals showing interesting modifications and ranging in size up to 1", intergrown and scattered on a crystallised Quartz matrix, with numerous small bright golden PYRITE crystals scattered on the Quartz. \( 5\times3\frac{1}{2}'' \). £14.

13. **CALCITE.** Santo Domingo, Chihuahua, Mexico. Specimen A - Select, very sharp, translucent to transparent, large "dog-tooth" crystals with a colourful reddish irony inclusion in each of the crystals, forming a choice intergrown group. \( 4\times3\frac{1}{2}'' \) - with each of the crystals approx.1" in size - £8; Specimen B - Two large translucent, sharp crystals with irony inclusions, aggregated in parallel growth. Each crystal is approx. \( 2\times1\frac{1}{4}'' \) in size, and there is a little matrix attached. 3x2\frac{1}{2}'' . £2.50.

14. **CARROLLITE.** Ruashi, Katanga, Zaire. Bright, silvery, well formed modified crystal 5 mm. in size, implanted on a matrix of crystalline Calcite, with thin crusts of bright pink Sphaerocobaltite. \( 2\times1\frac{1}{2}'' \). £7.50.

15. **CASSITERITE.** St. Michaels Mount, Marazion, Cornwall. Superb, lode section consisting of a \( 2\frac{1}{2}'' \) wide band of milky Quartz with an open central fissure on which are implanted and scattered large, bright, blackish, twinned crystals of Cassiterite to 1 cm. in size. There are also spots and crystalline masses of Cassiterite scattered through the Quartz and aggregates of platy Muscovite mica adjacent to the Greisen walls. \( 4\times2\frac{1}{2}\times3'' \) wide. £14.

16. **CASSITERITE.** New Rosewarne Mine, Gwinear, Cornwall. Bright, lustrous block twinned crystals to 4 mm. in size, richly scattered and lining cavities in Quartz/Chlorite/Killas veinstuff, and associated with small, sharp, silvery crystals of Arsenopyrite. \( 3\times2'' \). £7.50.

17. **CASSITERITE.** Kit Hill Mine, Callington, Cornwall. Bright, brownish black, small sharp crystals and masses intergrown and encrusting a \( 1\frac{1}{4}\times1\frac{1}{4}'' \) area on Tourmalinised matrix. \( 2\times2\times1\frac{1}{2}'' \). £2.

18. **CERUSSITE.** Tsumeb, Otavi, S.W. Africa. Superb, very large, bright, glassy transparent to translucent twinned crystals forming a very fine intergrown group on matrix. The major crystal is over \( 2\frac{1}{2}'' \) in size and shows the "sixling" habit to good advantage - the other crystals range up to \( 1\frac{1}{2}'' \) in size and all show fine sharp faces and high lustre. Overall size of the specimen \( 4\times2\frac{1}{2}\times2\frac{1}{2}'' \) high. £34.
19. CHABAZITE. The Storr, Isle of Skye, Scotland. Lustrous, creamy white sharp crystals, mostly around 4 mm. in size, thickly lining a 2x2" cavity in Basalt matrix, with numerous smaller cavities also lined with Chabazite. 4x2¼". £5.

20. CHALCEDONY. Trevaskas Mine, Gwinear, Cornwall. Choice, waxy, toffee coloured branching tubose mass of interesting shape and form. 2½x2½". £4.50.

21. CHALCEDONITE. Wheal Gorland, St. Day, Cornwall. Bright, emerald green, platy crystal mass aggregated on gossany Quartz matrix. The largest group of crystals is approx. 8 mm. across. 1¼x1¼". £4.

22. CHALCOPYRITE. Dreislar, Sauerland, Germany. Specimen A - Bright golden, sharp, complex crystals, some with an attractive tarnish, ranging in size up to 5 mm. richly scattered over a bladed 'coxcomb' mass of crystalised pinkish white Barytes. 4x2". £3; Specimen B - Bright, slightly tarnished, complex crystals mostly around 2 mm. in size, thickly scattered on creamy white saddle shaped crystals of Dolomite on pink Barytes matrix. 3x1½". £2.50.

23. CHALCOPYRITE. Carn Brea Mine, Illogan, Cornwall. A large, tarnished, sharp sphenoidal crystal approx. ½" in size, implanted on elongated hexagonal crystals of milky Quartz with two slightly smaller Chalcopyrite crystals. 2½x1½". £4.50.

24. CHENEVIXITE. Wheal Gorland, St. Day, Cornwall. Rich, waxy, greenish black masses, thickly aggregated in Quartzose Gossan, with much earthy light olive green Olivenite. Very rich examples of this rare copper mineral. Specimen A - 2x2x1½". £3.50; Specimen B - 2x1½x1¼". £2.25; Specimen C - 1¼x1¼". £1.25.

25. CHILDRENITE. George & Charlotte Mine, Tavistock Hamlets, Devon. Bright, sparkling, small sharp coffee brown crystals richly encrusting Pyrite/Quartz veinstuff. 2½x2½". £7.

27. COLUMBITE. Minas Gerais, Brazil. Select, well formed, lustrous black, single crystal showing good crystal faces and a perfect flat termination. 1¼x1½" x ½" across the axis. £11.

29. NATIVE COPPER. Treskerby Mine, Nr. Redruth, Cornwall. A tarnished dendritic crystalised mass of interesting shape with a slight green encrustation and odd fragments of Quartz attached. 3x1½x1¼". £7.

30. NATIVE COPPER. Quincy Mine, Keweenaw Pen., Michigan, U.S.A. Very fine, hackly, pure thick branching crystalised mass. The specimen consists of two main branches joined at two points and is suitable for display. Overall size 5½x3½x2½". £16.

31. COPRITE. Wheal Damsel, Gwennap, Cornwall. Choice, dark maroon coloured well formed octahedral crystals, mostly around 2-3 mm. in size, thickly intergrown and encrusting cellular Quartz matrix. 3½x2½". £8.

32. CURITE. Chinkolobwe, Katanga, Zaire. Rich, bright orange mass traversed by threads of mustard yellow Soddyite, some showing small well developed crystals in places. 2x1½". £12.
33. **DAVIDITE.** Radium Hill, Olary, S.Australia. Choice, lustrous brown mass replacing a portion of a large Pyrite crystal. Interesting and unusual pseudomorph. 1x4x3". £5.

34. **DESCLOISITE.** Berg Aukas, Otavi, S.W. Africa. Fine, lustrous, dark brown, sharp spear shaped crystals ranging in size up to ½", thickly intergrown and crowning a botryoidal shaped matrix. Excellent example of this mineral, which displays well. 3x1½x2" high. £23.

35. **DOLOMITE.** New Glencrieiff Mine, Wanlockhead, Dumfries. Bright, creamy white, curved saddle shaped crystals, thickly encrusting matrix with several doubly terminated sharp milky Calcite crystals to ½" in size, implanted on it, together with odd black crystals of Sphalerite. 2x2". £3.25.

36. **DOLOMITE.** Treece, Kansas, U.S.A. Choice, lustrous, light pink, curved, saddle shaped crystals, mostly around ½" in size, thickly intergrown and completely encrusting Dolomite matrix. These are specimens from a new occurrence and are of fine form for display. Specimen A - 6x4x1½". £9; Specimen B - with slightly larger crystals ranging in size up to 1 cm., and with odd small scattered Chalcopyrite crystals - 4x2½x1½". £6.50; Specimen C - Similar to Specimen A - 2½x2½". £3.50.

37. **EPIDOTE.** Hartz Ranges, N.Terr., Australia. Bright, dark olive green mass of well formed elongated intergrown crystals. The crystals range in size up to 1" in length and many show good terminations. 3½x3x1½". £14.

38. **EPIDOTE.** Monte Rosso, Val d'Aosta, Piedmont, Italy. Very bright, translucent, sharp well formed olive green crystals to ½" in size, forming an intergrown group with a sharp terminated darker green crystal of Diopside in association. 1½x1½". £7.75.

39. **ERYTHRITE.** Bous Azzer, Anti-Atlas, Morocco. Fine, bright, raspberry coloured bladed crystals thickly aggregated and radiated in massive Skutterudite. There are areas where the Erythrite is well crystallised in cavities. Very colourful specimen from this rich cobalt mine. 3x2²x2½". £17.

40. **FLUORITE.** Corvina Mine, Asturias, Spain. Unusual, light purple, translucent to transparent intergrown cubic crystals, with no matrix attached. The crystals range in size up to 1¼" and show the interesting bevelled edges for which this location is noted. 4x2½". £8.

41. **FLUORITE.** Allenheads Mine, Allenheads, Northumberland. Bright, light purple, translucent cubic crystals thickly intergrown and encrusting Limestone matrix. Specimen A - with crystals ranging in size to ½" and with a slight dusting of small Quartz crystals and a little creamy brown Siderite. 5½x4¼". £13; Specimen B - With crystals nearly 1" in size, showing some good transparency and with odd small Quartz and Siderite crystals. 3½x2½x2½". £8; Specimen C - With crystals to ¾" in size and a little brownish Siderite. 3½x2½". £4.50.

42. **FLUORITE replaced by Chalcedony.** Wheal Mary Ann, Menheniot, Cornwall. An extremely large, well formed octahedral crystal completely replaced by milky white Chalcedony. The crystal has face edges of 1" and sits well on a matrix of massive Chalcedonic Quartz, together with another octahedral crystal slightly over ½" in size. 3½x2½". £9.

43. **GALENA.** Mid-Continent Mine, Treece, Kansas, U.S.A. Sharp, bright, cubic crystals to 1 cm. in size, attractively scattered on both sides of a mass of large intergrown lustrous brown Sphalerite crystals with numerous small Chalcopyrite crystals in association. 3x2x1½". £7.
44. GILBERTITE. Tregargus Quarry, St. Stephen, Cornwall. Rich, bright, platy crystalised mass associated with a little creamy coloured Orthoclase Felspar. 2½x2½". £2.50.

45. GOETHITE. Restormel Royal Iron Mine, Lostwithiel, Cornwall. Choice, superbly banded, botryoidal mass, showing alternate bands of light and dark brown Goethite right through the specimen. One side of the sample has been cut and polished to show the bands to best effect. 3x2½". £7.

46. NATIVE GOLD. Gwydyrnydd Mine, Dolgelly, Merionethshire. Small, golden metallic specks and masses in white Quartz with traces of Sphalerite. 1x3½". £4.50.

47. GRAPHITE. Borrowdale, Cumberland. Pure metallic shining grey mass. 3½x2½". £2.75.

48. GROSSULAR variety Hessonite. Val d'Ala, Piedmont, Italy. Specimen A - Fine, translucent, very bright, orangey red, sharp complex crystals to ⅛" in size, richly scattered and intergrown on crystalline greenish Clinohlore matrix. 2½x2". £16.50; Specimen B - Bright, translucent, light orangey red crystals to 3 mm. in size, richly encrusting matrix with much light greyish green crystalised aggregates of Clinohlore. 3x2½". £7.75; Specimen C - Bright, translucent, sharp orangey red crystals to ¾" in size intergrown on Clinohlore matrix. 1¾x1½". £5.50.

49. HARMOTONE. Bellsgrove Mine, Strontian, Argyllshire. Lustrous transparent, very sharp well formed crystals to 5 mm. in size, intergrown and completely encrusting matrix with odd larger translucent milky Harmotone crystals implanted on them. 3½x3". £9.

50. HEMATITE. Rio Marina, Isle of Elba, Italy. Very large, bright, sharp blackish crystals, the largest being over 1" in size, forming a fine intergrown mass. 2½x2½". £11.

51. HEMATITE variety "Pencil Ore". Parkside Mine, Frizington, Cumberland. Select bright, fibrous convoluted mass of excellent form and suitable for cutting and polishing. 5x3x2½". £13.

52. HEMIMORPHITE. Roughtengill Mine, Holbeck, Cumberland. Small, transparent, well formed crystals thickly lining large cavities in cellular Gossan matrix. 3x2½x1½". £3.50.

54. JULIANITE. Old Kilpatrick, Renfrew, Scotland. Choice, lustrous, salmon coloured sharp terminated crystals to 8 mm. in size, thickly intergrown on a 2½x1½" area on Basalt matrix with a little whitish Calcite in association. 4x2½". £11.

55. HYALITE. Kulmain, Fichtelgebirge, Germany. Rich, translucent, creamy white, botryoidal crust on matrix. 2½x1½". £1.50.

56. IDOCRASE, Bellecombe, Val d'Aosta, Piedmont, Italy. Lustrous, very sharp, well formed crystals to 5 mm. in size, richly scattered and intergrown on massive Idocrase. 2½x1½". £5.50.

57. ISO-STANNITE. Clogga Mine, Perranzabuloe, Cornwall. Very rich, bright metallic greyish masses with a slight iridescent tarnish in places associated with Arsenopyrite. Specimen A - 3x2½x1½". £4.50; Specimen B - 2x2½". £2.25; Specimen C - 2x1½x1½". £1.25.

<td>65. MANGANITE</td>
<td>Lifeld, Harz Mts., Germany.</td>
<td>Select, bright black, divergent bladed crystals to 1½&quot; in length, thickly intergrown with a little white Barytes. 3x1½x1½&quot;. £3.</td>
</tr>
<tr>
<td>66. MARSASITE</td>
<td>Tinacoff Mine, Illogan, Cornwall.</td>
<td>Bright, light golden, sharp, twinned bladed crystals to 5 mm. in size, thickly intergrown and encrusting matrix. 2½x2&quot;. £5.</td>
</tr>
<tr>
<td>67. MELANITE</td>
<td>Langban, Wernland, Sweden.</td>
<td>Choice, bright, brownish black, very sharp, complex crystals to 5 mm. in size, richly scattered and intergrown on matrix, with a little Diopside in association. 2½x2½&quot;. £12.</td>
</tr>
<tr>
<td>68. MESOLITE</td>
<td>Talisker Bay, Isle of Skye, Scotland.</td>
<td>A ¾x⅞&quot; cavity, in Basalt, completely infilled with bright, needly white, Mesolite crystals. 3x¹⅞x1½&quot;. £2.25.</td>
</tr>
<tr>
<td>69. MIMETITE</td>
<td>Driggith Mine, Jellicock, Cumberland.</td>
<td>Lustrous, light pea-green, curved barrel shaped crystals mostly around 2 - 3 mm. in size, thickly encrusting cellular Quartz. Specimen A - with both sides of the sample completely covered with Mimetite. 4x2¼&quot;. £4.50; Specimen B - As Specimen A - 2⅛x1⅝&quot;. £2.75; Specimen C - 1½x1½&quot;. £1.25.</td>
</tr>
<tr>
<td>70. OLIVENITE</td>
<td>Waen Garcil, St. Day, Cornwall.</td>
<td>Small, sparkling, olive green, crystals, richly lining numerous cavities in gossany Quartz. Excellent for micro study. Specimen A - 2½x1½”. £2.50; Specimen B - 1½x1½”. £1.65.</td>
</tr>
<tr>
<td>71. PIATTHETITE</td>
<td>Mina Ojuela, Mapimi, Durango, Mexico.</td>
<td>Choice, sparkling black, small crystals richly encrusting cellular Diopside matrix with minor Calcite in association. Very rich example of this mineral. 4½x2½&quot;. £11.</td>
</tr>
<tr>
<td>72. PREHNITE</td>
<td>Bishopston, Renfrew, Scotland.</td>
<td>Fine, translucent, light line green, sharp, crystals and radiated crystal aggregates thickly lining a 2 x²&quot; cavity in matrix, with odd crystals of Calcite in association. 3x2½x2½&quot;. £5.</td>
</tr>
</tbody>
</table>
73. **PYRITES.** Levant Mine, Pendeen, Cornwall. A group of four well formed, bright, metallic, crystals showing striations on their faces, the largest crystal being over \( \frac{3}{4} \) in size. 1\( \frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2} \). £4.50.

74. **PYRITES.** Rio Marina, Isle of Elba, Italy. Choice, bright, metallic, sharp, well formed Pyritohedral crystals to \( \frac{3}{4} \) in size, thickly intergrown and scattered over a matrix of sparkling black Specular Hematite. Good specimen for display. 4\( \times 3\frac{1}{2} \). £2.

75. **PYRITES.** Wynchen Mine, Egremont, W. Cumberland. Small, bright, metallic modified crystals richly encrusting a cone shaped mass of creamy white Dolomite with \( \times \) small translucent crystals of whitish Calcite in association. 3\( \times 2\frac{1}{2} \). £4.50.

76. **PYROMORPHITE.** Roughengill Mine, Salibcock, Cumberland. Bright, line green, sharp hexagonal crystals to 3 mm. in size, richly intergrown on cellular Quartz veinstuff. 2\( \frac{1}{2} \times 2\frac{1}{2} \). £5.50.

77. **PYROMORPHITE.** Burgan Mine, Nr. Shelve, Shropshire. Specimen A - Small light green needly crystals thickly encrusting cellular Quartz with blackish Psilomelane in association. 3\( \frac{1}{2} \times 2\frac{1}{2} \). £4.50; Specimen B - Bright, light green, well formed hexagonal crystals to 3 mm. in size, richly encrusting matrix. 2\( \frac{1}{2} \). £3.25; Specimen C - Small, light green, needly crystals richly encrusting cellular Quartz. 1\( \frac{1}{2} \times 1\frac{1}{2} \). £1.50.

78. **QUARTZ.** Wheel Mary Ann, Menheniot, Cornwall. A plate of bright, transparent to translucent sharp pyramidal crystals to \( \frac{1}{4} \) in size, forming a pure intergrown group, there is a slight encrustation on the back of the specimen of small cubic Pyrite crystals. 6\( \times 3\frac{1}{2} \). £8.

79. **SCHWEITE.** Carrock Mine, Salibcock, Cumberland. Choice, rich, lustrous, waxy, ten colored masses associated with Quartz and Greisen, with minor amounts of Arsenopyrite on some pieces. Superb bright blue fluorescence under short wave u.v. Specimen A - 2\( \frac{1}{2} \times 2\frac{1}{4} \). £3.50; Specimen B - 2\( \frac{1}{2} \times 2\frac{1}{4} \). £2.50; Specimen C - 1\( \frac{1}{2} \times 1\frac{1}{2} \). £1.25.

80. **SCORODITE.** Cligga Mine, Perranzabuloe, Cornwall. Bright, small, well formed, greyish blue crystals richly aggregated and lining cavities in milky Quartz. Specimen A - 2\( \frac{1}{2} \)\( \times 1\frac{1}{2} \). £3.25; Specimen B - 1\( \frac{1}{2} \times 1\frac{1}{2} \). £1.75.

81. **SIDEITE.** Tincroft Mine, Illagen, Cornwall. Very large, well formed, light brown translucent crystals to 1 cm. in size, intergrown on Quartz veinstuff. 3\( \times 2 \). £3.50.

82. **SMITHSONITE.** Tsuenb, Ot-vii, S.W. Africa. Choice, translucent to transparent very sharp rhombic crystals to 1 cm. in size, thickly intergrown and completely encrusting matrix. 3\( \times 2\frac{1}{2} \). £9.

83. **SPECULARITE.** Florence Mine, Egremont, W. Cumberland. Specimen A - Superb, very bright, black platy crystals to 5 mm. in size, completely encrusting Hematite matrix with \( \times \) scattered translucent doubly terminated crystals of Quartz in association. Excellent for display. 4\( \times 3\frac{1}{2} \). £17; Specimen B - Choice, bright black platy crystals to 7 mm. in size thickly intergrown and encrusting Hematite with one side and part of the reverse of the specimen encrusted with intergrown sharp, translucent, crystals of Quartz. 3\( \times 1\frac{1}{2} \). £8; Specimen C - Bright black platy crystals to 5 mm. in size, thickly encrusting Hematite and associated with \( \times \) transparent doubly terminated crystals of Quartz to 1 cm. in size. 1\( \frac{1}{2} \times 1\frac{1}{2} \). £3.25.
84. SPHALERITE. Coolbrough Mine, Nr. Nenthead, Cumberland. A plate of lustrous brownish-black large well formed intergrown crystals showing much parallel growth. 4x3". £7.

85. STANNITE. East Pool Mine, Illogan, Cornwall. Very rich, slightly tarnished, metallic mass associated with a little golden Chalcopyrite, blades of blackish Wolframite, Quartz and a small area of neatly grey Bismuthinite. 3x2½x1½". £7.

86. STAUROLITE. Pizza Foro, Ticino, Switzerland. Lustrous, dark reddish brown elongated hexagonal crystal sections, to ½" in length, richly embedded in whitish Schist with odd blades of light blue Kyanite. 2½x2½x1". £4.50.

87. STIBNITE, Knipes Mine, New Cumnock, Ayrshire, Scotland. Rich, bright, metallic grey bladed crystalline mass associated with very minor Quartz, a little yellowish Stibiconite and traces of reddish Kermesite. 3x2½x1½". £4.50.

88. STIBNITE. Flinders Ranges, South Australia. Specimen A - Choice, lustrous, taeniolate, salmon coloured, very large, sharp terminated crystals to ½"
89. STIBNITE. Berufjord, Iceland. Choice, lustrous, creamy white, sharp, doubly terminated sheaf of crystals with no matrix. 2½x2½x½". £4.50.

90. STIBNITE. Whitesmith Mine, Strontian, Argyllshire. Rich, light line green, radiating fibrous masses with minor white Barytes in association. Specimen A - 3x2x²". £4.50; Specimen B - 1¾x1½". £2.50.

91. TETRAHEDRITE. Herdfoot Mine, Lonreath, Cornwall. Well formed lustrous, metallic grey tetrahedral crystals to ¼" in size, thickly intergrown on massive Tetrahedrite/Quartz matrix. 1½x1½". £6.50.

92. ULLMANITE. Musen, Siegerland, Germany. Pure, rich, metallic grey, mass with minor Quartz and traces of bronzy coloured Millerite. 2½x1½x1½". £11.

93. V.A.N.DINE. Mibladen, M. Mideiat, Atlas Mts., Morocco. Specimen A - Very choice, lustrous, orangy, perfectly formed hexagonal crystals mostly around 4 mm. in size, richly scattered and free standing on matrix. 3x1½x1½". £14; Specimen B - Choice, lustrous orangy red hexagonal crystals to 1 cm. in size, forming a pure intergrown mass and showing unusual colour zoning in the crystals. 1½x1½x1½". £11.

94. WILLEMITE. Franklin, Sussex C., New Jersey, U.S.A. Very rich, waxy, apple green masses associated with minor Whitish Sphalerite. Excellent fluorescence under u.v. light. Specimen A - 3x1½x1½". £6.50; Specimen B - 2x1½x1½". £4.50.

95. WITHERITE. Settlingstones Mine, Hexham, Northumberland. Fine, translucent, lustrous creamy white large, sharp, bladed crystals; some showing good hexagonal form, to 1" in size, thickly intergrown and encrusting massive Witherite. 3x3". £8.

96. WOLFRAMITE. Castle-in-Dinas Mine, St. Columb, Cornwall. Pure, solid, bright black bladed mass with minor Quartz associated. A label attached to the sample notes that the specimen was collected in 1937. 2½x1½x1½". £2.25.
97. WOLFRAMITE. A superb, large, sharp, bright black, well
terminated single crystal, showing striations down the
crystal faces and a little parallel growth. One side of the
specimen is partially encrusted with small creamy brown
lenticular Siderite crystals. 2½x2x1" across the axis. £24.

98. WOLFRAMITE. Two bright black well terminated crystals in
parallel growth, showing good striations down the crystal
faces and virtually free of encrustation by other minerals.
2¼x1¾" x ¾" across the axis. £13.

99. WOLFRAMITE. A choice group of crystals in parallel growth,
showing good sharp faces and terminations and with one side
of the specimen encrusted with small creamy brown Siderite
crystals. On the termination of the crystals are implanted
two large, sharp, rhombic crystals of light creamy brown
Siderite, the larger of the two crystals being approx. 1" in
size, 3½x1½x1¾". £27.

100. WOLFRAMITE. A group of very bright black striated tabular
crystals in parallel growth showing good terminations. 1½x1½x½".
£9.

101. ARSENOPYRITE. Brilliant, silvery, sharp crystals to ¾" in size,
stacked one on top of another and associated with minor
Quartz, Siderite and a ½" bright black crystal of Sphalerite.
Very showy specimen. 3½x2½x2½" high. £17.

102. SIDERITE. Very large, light tan coloured, hexagonal crystals to
1¾" in size, forming an intergrown group and associated with
a portion of a lustrous, translucent green Apatite crystal.
There is a slight dusting of small Pyrites in places on the
Siderite. 4x3x3". £14.

103. ARSENOPYRITE. Superb, brilliant, silvery sharp terminated
crystals to ¾" in size, forming a pure intergrown plate with
bright, translucent to transparent, sharp modified sea-green
hexagonal crystals of Apatite to 1 cm. in size, scattered on the
one end of the specimen. 4½x3½x3½". £45.

104. Sphalerite. Bright, lustrous black, modified crystals in parallel
growth associated with small lustrous, tan coloured, lenticular
crystals of Siderite together with a solitary 1" sized Siderite
crystal, and minor crystal sections of Arsenopyrite and
Apatite. 2½x2¾x2". £8.

105. APATITE. A sharp, single, well formed translucent to transparent;
colour zoned sea-green hexagonal crystal slightly encrusted
with Pyrite in places. 1x1½x½". £7.

106. APATITE. A group of well formed hexagonal colour zoned sea-green
intergrown crystals, the largest being ½x1½" in size. £2½x½x½. £5.

107. SIDERITE. Superb, very large, tan coloured lenticular crystals of
Siderite to 1¾" in size, implanted on matrix and associated
with a beautifully tarnished 1½" sharp crystal of Arseno-
pyrite, several intergrown large sea-green hexagonal Apatite
crystals, part of a 1½" sized lustrous black Sphalerite
crystal and minor smaller crystals of Calcite, Arsenopyrite
and Muscovite mica. 2½x2½x2½". £28.

108. QUARTZ. A superb, perfect, sharp, translucent to transparent;
terminated hexagonal crystal showing another phantom crystal
inside which is partially encrusted with mica and Apatite,
associated with another smaller crystal and bright black
bladed crystals of Wolframite around the base. The major crystal
is 6" long x 4x3½" across the axes, the total size of the sample
is 6x4x7" high. Excellent museum specimen for display. £85.
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of VAT.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

AUGUST 1975

1. **ALMANDINE.** Roxbury, Connecticut, U.S.A. Rich, lustrous, translucent "gemmy" raspberry red crystalline mass, with minor matrix attached. 3x2". £2.25.

2. **APATITE.** Panasqueira, Beira-Beixa, Portugal. Choice, large, transparent to translucent sharp hexagonal crystals of a light sea-green colour, ranging in size from ¼" - 1", attractively intergrown and scattered on Quartz matrix with a little Calcite and Zinnwaldite in association. 2½x2½x1½". £22.

3. **NATIVE ARSENIC.** Pribram, Bohemia, J.S.S.R. Pure dark grey, heavy, metallic mass with traces of bright, reddish, Proustite in association. 2½x2½x1¼". £5.50.

4. **ARSENOPYRITE.** Panasqueira, Beira-Beixa, Portugal. Large, bright, metallic, silvery bladed crystals to ¾" in size, thickly intergrown on massive Arsenopyrite/Quartz matrix with odd small creamy white crystals of Calcite in association. 3½x1½x1½". £13.

5. **ARSENOPYRITE.** Virtuous Lady Mine, Nr. Buckland, Monachorum, Devon. Sharp, silvery, twinned crystals mostly around 3-4 mm. in size, richly scattered and intergrown with milky white small terminated crystals of Quartz and large tan-coloured rounded crystalised masses of Siderite. Very interesting specimen from this old location. 3½x2¼". £8.

6. **BARYTES.** Dreislar, Sauerland, Germany. Select, bright, snow-white bladed crystals in parallel growth forming a very attractive dome shaped specimen with odd small bright, slightly tarnished, crystals of Chalcopyrite scattered on it. 3½x2½". £7.

7. **BARYTocalcite.** Blagill Mine, Alston Moor, Cumberland. Lustrous, translucent, creamy coloured, sharp terminated crystals to 1 cm. in size, thickly intergrown and lining a 1½x1½" area on massive Barytocalcite. 2½x2¼". £6.50.

9. NATIVE BISMUTH. Wheal Sperron, Redruth, Cornwall. Specimen A -
Very rich, metallic, slightly tarnished, crystalline mass inter-
grown with a little Quarzose matrix. 2x1 54x1 54". £2; Specimen B-
Bright, silvery, metallic, crystalline masses aggregated and
scattered in granular Quartz. 1 54x1 54x1 54". £3.25.

10. BORNEITE. Dolcoath Mine, Camborne, Cornwall. Rich, attractive,
purplish, iridescently tarnished metallic mass associated with
brassy Chalcopyrite. 2x2x1 54". £2.50.

11. BOULANGERITE. Stari-Trg Mine, Trepca, S. Serbia, Yugoslavia.
Select, silvery grey, thin needly crystals richly encrusting
and lining cavities in crystallised Sphalerite matrix with a little
Quartz, Sphalerite and Rhodochrosite in association. 3 54x2 54x1 54".
£7.

12. CABREHITE. Laurion, Attica District, Greece. Bright, lime green,
translucent, small well formed crystals aggregated in areas on
cellular Limonite/Dolomite matrix. 2 14x1 54x1 54". £11.

A large lustrous creamy white, well formed, 'dog-tooth' habit
crystal 3" long x 1 34" across the axis, with another crystal 2"
in length attached to it and with both the crystals partially
encrusted on one side with well formed, bright black, Sphalerite
crystals to ½" in size. Overall size of the specimen 2½x2x3".
£4.50.

14. CALCITE. Hailemoor Mine, Nr. Egremont, W. Cumberland. Lustrous,
transparent to translucent, very sharp, terminated elongated
crystals, mostly around ½" in length, thickly intergrown and
lining a large 3x1 54" cavity in Hematitic matrix. 4x2 14x2 14". £8.50.

15. CARPHOLITE. Schlaggenwald, Bohemia, C.S.S.R. Rich, golden,
radiated fibrous crystalline mass encrusting Greisen. 1 ½x1 54".
£3.50.

16. CASSITERITE. Blue Hills Mine, St. Agnes, Cornwall. Choice,
big, deep brown elongated 'sparable' type crystals, some
showing good terminations, to ½" in length thickly lining large
cavities and partially encrusting Cassiterite/Chlorite veinstuff.
3x3x1 54". £11.

17. CASSITERITE. Great Flat Lodge, Wheal Grenville, Troon, Cornwall.
Lustrous, light brown, elongated crystals richly intergrown and
encrusting an area 2½x1 ½" on Cassiterite/Tourmaline Peach
veinstuff. Very rich specimen from one of the most productive
tin lodes in Cornwall. 3½x3". £7.

18. CASSITERITE variety "WOOD TIN". West Wheal Kitty, St. Agnes,
Cornwall. Select, creamy brown, rounded banded masses richly
aggregated in Quartz/Chlorite matrix. 1 ½x1 ½x1 ½". £5.

Rich, light blue, botryoidal, crystalline masses, thickly lining a
1x1" cavity in dense Limonite matrix with a little Cuprite
and Malachite in association. 2½x2". £3.50

20. CHALCOPHYLLITE. Penberthy Crafts Mine, St. Hilary, Cornwall.
Small, emerald green, platy hexagonal crystals scattered in
small cavities in cellular gossany matrix with a little
Malachite and traces of bluish Connellite. 2x2". £1.50.

21. CHALCOPYRITE variety "BLISTER COPPER". Wheal Basset, Illogan,
Cornwall. Choice, bright, golden botryoidal mass of interesting
shape and form. 3x1 ½". £4.50.
22. CHALCOPYRITE. Fowey Consols Mine, Tywardreath, Cornwall. Large, golden, metallic, sphenoidal crystals to 1 cm. in size, thickly intergrown and scattered on both sides of cellular Chlorite/Quartz veinstuff. 2\(\frac{1}{2}\) x 1\(\frac{3}{4}\)". £6.50.

23. CHALCOPYRITE. Mic-Continent Mine, Trece, Kansas, U.S.A. Fine, large, very sharp sphenoidal crystals to 1 cm. in size, richly scattered over a matrix of creamy coloured intergrown saddle shaped crystal of Dolomite. 5x4". £12.

24. CHALCOSITE. Sausalito, Marin Co., California, U.S.A. Rich, snow-white, crusts of micro crystals encrusting Cherty matrix. Specimen A - 2x1\(\frac{1}{4}\)". £2.50; Specimen B - Not so rich as Specimen A - 1\(\frac{1}{4}\)x1". £1.25.

25. CONDURITE. (Variety of Domekite), Condurrow Mine, Trow, Nr. Camborne, Cornwall. Pure, deep brown, masses from the type location, which were collected early last century. Specimen A - 1\(\frac{1}{4}\)x1". £4.50; Specimen B - 1x1". £3.25.

26. NATIVE COPPER. South Caradon Mine, St. Cleer, Cornwall. Choice, bright, metallic, mass attractively intergrown with fragments of white Quartz and with areas of greyish black MELAONITE. Very rich specimens from one of Cornwall's foremost Copper Mines. Specimen A - 3\(\frac{1}{2}\)x3x1\(\frac{3}{4}\)". £13; Specimen B - 3x2\(\frac{1}{4}\)x1\(\frac{1}{2}\)". £8.

27. NATIVE COPPER. Peko Mine, Tennant Creek, N. Terr., Australia. Very rich, hackly, metallic mass associated with a little reddish Cuprite and white Aragonite. Superb specimen for economic display, weight approx. 6lbs. 4x4x3". £14.

28. CORKITE. Dernbach, Nr. Montabaur, Hesse, Nassau, Germany. Small, lustrous, sharp crystals scattered and aggregated on dense Limonite/Quartz matrix. 1\(\frac{1}{4}\)x1x1". £2.75.

29. CORNETITE. Mine de l'Étoile, Lubumbashi, Katanga, Zaire. Choice, deep blue, flattened crystals to 1 mm. in size, richly encrusting matrix. 3x2". £22.

30. CORUNDUM. Miask, Ilmen Mts., Russia. A large greyish tapering hexagonal crystal 14" long x 1" across the axis associated with plates of Muscovite mica and a portion of another Corundum crystal. 2\(\frac{1}{2}\)x14x1\(\frac{3}{4}\)". £2.25.

31. CROUITE. Red Lead Mine, Dundas, Tasmania, Australia. Brilliant, lustrous, orangey red intergrown masses or elongated "jack straw" crystals associated with minor Limonite matrix. Superb bright specimens which are choice for display. Specimen A - with crystals to \(\frac{3}{4}\)" in length, 2\(\frac{1}{2}\)x2". £14; Specimen B - with crystals to \(\frac{1}{2}\)" - 2x1\(\frac{1}{2}\)". £9; Specimen C - with crystals to \(\frac{1}{4}\)" - 1\(\frac{1}{2}\)x1". £5.

32. CUPRITE. Phoenix Mine, Linkinhorne, Cornwall. Rich, deep red, cellular mass intergrown with much light green botryoidal Malachite and old fragments of Quartz. 2\(\frac{1}{2}\)x2x1\(\frac{1}{2}\)". £4.50.

33. CUPRITE variety "Plush Copper". Wheal Unity, Gwennap, Cornwall. Choice, carmine red, small needly crystals and velvet like crusts thickly covering and lining large cavities in massive cellular Cuprite with a 1x2" area of crystalline black Malachite. 3x2x1\(\frac{1}{2}\)". £11.

34. DUFTITE. Tsumeb, Otavi, S.W. Africa. Lustrous, small, olive green crystals thickly intergrown and covering cellular matrix with small white crystals of Dolomite frostng one side of the specimen and odd scattered glassy twinned crystals of Cerussite to 1 cm. in size. 2\(\frac{1}{2}\)x1\(\frac{3}{4}\)x1\(\frac{1}{2}\)". £6.50.
35. **EMBOLITE.** Broken Hill, N.S. Wales, Australia. Specimen A - Choice, silty green, cellular, tubular crystalised mass distinctly encrusting matrix, with minor Cerussite in association. 2½x1½". £1.1; Specimen B - Very rich, silty green, crystalised cellular mass associated with a little Cerussite. 1½x1½". £7.

36. **EOSPHORITE.** Aracuai, Minas Gerais, Brazil. Superb, transparent, coffee brown, very sharp, elongated terminated crystals, mostly around 2 - 3 mm. in size, thickly encrusting a whitish coated Amethyst Quartz matrix. 2½x2¼". £32.

37. **EPIDOTE.** Le Bourg d'Oisans, Isere, France. Fine, bright, sharp, elongated terminated olive green crystals to ¼" in length, thickly intergrown and encrusting massive Epidote. Select, old time, specimen. 2½x1½x1½" high. £14.

38. **ERYTHRONE.** Messe Cobalt, Selwyn Ranges, Queensland, Australia. Specimen A - Rich, bright pink, tufts of radiated needle crystals thickly aggregated on a 1½x1" area on matrix, with other smaller areas of Erythrite crystals. 3x2". £7; Specimen B - Fine, bright pink, crystalised vein section consisting of radiated needle crystals with minor attached matrix. 2¼x½" x ½" thick. £4.50; Specimen C - Pure, bright pink, needle crystalised vein section. 1½x½x½" thick. £3.25.

39. **FLUORITE.** Frizington, W. Cumberland. Unusual, pale yellowish, well formed cubic crystals, some showing an interesting internal zoning, to ¼" in size associated with a little creamy Dolomite, forming an intergrown group. 2½x2". £3.25.

40. **FLUORITE.** Stopheldburn Mine, Rookhope, Co. Durham. Translucent, pale purplish sharp cubic crystals to 1" in size, forming an intergrown group on Limestone with a little crystalised Galena in association. 3x2". £4.50.

41. **GALENA.** Baxter Springs, Cherokee Co., Kansas, U.S.A. Choice, bright, silvery grey, large sharp cubic Crystals to over 1" in size, thickly intergrown and encrusting Dolomite matrix. Excellent specimen for display. 6x4". £17.

42. **GALENA.** Greenside Mine, Glenridding, Westmoreland. Rich, greyish, metallic, oxidised crystals to 5 mm. in size thickly intergrown and encrusting cellular Quartz matrix. Specimen A - 3x2½x1½". £7; Specimen B - 3x1½x1½". £4.50.

43. **GASPÉITE.** Kambala, Western Australia. Select, pure, apple green, slightly botryoidal mass with minor attached Limonite. 2x2½". £5.50.

44. **HERSDORFFITE.** Mitterberg, Austria. Specimen A - Rich, silvery grey, metallic masses aggregated in Quartz with a little Chalcopyrite in association. 2¼x1½x1½". £2.75; Specimen B - Metallic grey small masses scattered in Quartz with a little Siderite and Chalcopyrite, not as rich as Specimen A - 2½x2x1½". £1.75; Specimen C - Metallic grey mass intergrown with golden Chalcopyrite and a little Quartz. 1½x1½". £1.25.

45. **NATIVE GOLD.** Witwatersrand, Transvaal, S. Africa. Rich, small, golden flakes disseminated through Quartzose 'banket' rock. 2½x½". £6.50.

46. **NATIVE GOLD.** Sierra Nevada, California, U.S.A. Superb, bright, golden, slightly water worn well formed octahedral crystal, with face edges slightly over ¼" in size. £25.
47. GUITEMANITE. Zuni Mine, Silverton, San Juan Co., Colorado, U.S.A. Very rich, silvery grey, metallic mass with a little matrix attached. An old A.E. Poole label accompanies this specimen. 2½x1½x1½". £11.

48. GYPSUM variety SELENITE. Djebel Sarhro, Morocco. Choice, undamaged, radiated cluster of large, sharp, tabular crystals with minor inclusions of Sand. The crystals range in size up to 1¼" and all show good terminations. 4x2½x2½". £5.50.

49. HARMOTONE. Settlingstones Mine, Hexham, Northumberland. Small, transparent, very sharp, well formed crystals mostly around 2¼ x ½ mm. in size, thickly encrusting crystallised Witherite. 3x2½". £7.

50. HEMINIDRITE. Wickenburg, Maricopa Co., Arizona, U.S.A. Orangey red, small crystals and crystalline masses, scattered on and through cellular Quartz. 2x1½x1½". £4.

51. KYANITE. Mt. Greiner, Zillertal, Austria. Specimen A - Choice, large, bluish, elongated bladed crystal 4¼" in length attached to Quartz matrix with minor other blades of Kyanite. 4½x2½". £3.75; Specimen B - Bright, bluish, sharp bladed crystals to 2½" in length, attached to minor Quartz matrix. 2½x1½". £2.25.

52. LAUMONITE. "Easy Go" Level, Pine Creek Tungsten Mine, N.R. Bishop, California, U.S.A. Choice, creamy white, sharp, well formed, terminated crystals to ½" in length thickly intergrown and encrusting massive Laumontite. Very good example of this mineral, the crystals being particularly well formed. 3x2½x1½". £9.

53. LIMONITE. Parknoweth Mine, N.R. St. Just, Cornwall. Rich, lustrous, black, thick radiated botryoidal mass covering white Quartz, the surfaces of the Limonite exhibiting a very high lustre. Specimen A - 6x4½x2½". £3; Specimen B - 5½x3¼x2½". £7. The Quartz matrix of each of the specimens has been sawn flat so that the samples display to best advantage.

54. LINARITE. Redhill Mine, Coldbeck, Cumberland. Specimen A - Very rich, bright blue, well formed crystals to 3 mm. in size, thickly intergrown on a 1½" area on Quartz veinstuff with traces of Malachite. 2¼x1½x½". £7; Specimen B - Bright blue, rich, crystalline masses and small crystals aggregated on and in cavities in Quartz with areas of crystallised greenish Brochantite in association. 1½x2x1½". £4.50.

55. LINDGRENITE. Live Oak Pit, Inspiration, Gila Co., Arizona, U.S.A. Very rich, lustrous, lime green platy crystals aggregated and scattered on both sides of Quartzose matrix. 3x2½x1½". £5.

56. LOLLINGITE. Penlee Quarry, Newlyn, Cornwall. Bright silvery, pure metallic mass with minor Quartz in association. 3x2½x1½". £4.50.

57. MIDDLEMITE. Blackbird Mine, Cobalt, Idaho, U.S.A. Choice, transparent to translucent, very sharp, terminated crystals thickly intergrown on matrix. Specimen A - With crystals mostly around 3 mm. in size. 1¼x¾". £8; Specimen B - With crystals to ¾ mm. in size. 1½". £6.50.

58. MALACHITE. Concepcion Del Oro, Zacatecas, Mexico. Superb, bright green replacement by Malachite of large, very sharp, terminated tabular Azurite crystals. The crystals range in size up to 1¼" in length and form an intergrown mass with minor crystallised milky Quartz and matrix attached. Overall size, 3x2½x1½". £23.

59. MALACHITE. Browns' Claim, Rio Jungle, N.Terr., Australia. Attractive, bright green, velvety pure botryoidal mass with a little creamy white crystallised Serpulite in association. 2x1½x1½". £4.50.
60. MENEGHINITE. Pacific Qny., Santa Cruz Co., California. Rich, silvery grey, masses intergrown with Quartz and bladed Wollastonite. 1½x1½. £1.25.

61. MILKHITE. Valenciana Mine, Guanajuato, Mexico. Choice, small sharp, terminated hexagonal crystals to 3 mm in size very richly scattered over a matrix of large lustrous sharp intergrown Albite crystals. 3½x2½. £27.

62. MIMETITE. Tsuneb, Otavi, S.W. Africa. Bright, lustrous, creamy yellow elongated crystals to ½ in size thickly encrusting a matrix of intergrown creamy rhombohedral Calcite crystals to 1 cm in size, with a little micro crystallised dark greenish Duftite in association. 3x1½x1½. £11.

63. MIMETITE. San Pedro De Corralitos, Durango, Mexico. Specimen A - Very fine, bright, light yellow, silky botryoidal masses, somewhat resembling cauliflowers, ranging in size up to ¾ in diameter, thickly intergrown on both sides of cellular matrix. Attractive specimen for display. 3½x3½. £17; Specimen B - Lustrous, light, yellowish botryoidal masses to 1 cm in diameter, richly aggregated and scattered on Limonitic matrix. 3x1½x1½. £5.

64. PHOSPHOPHYLLITE. Hagendorf, Oberpfalz, Bavaria, Germany. Choice, translucent light purplish sharp, well formed crystals to ½ in size, thickly aggregated in cavities in Quartzose matrix with much blackish Triplite in association. 3½x2½x1½. £17.

67. POPIJAKITE. Drakewalls Mine, Gunnislake, Cornwall. Specimen A - Choice, small sparkling, sky blue crystals richly encrusting a 2x1½ area on altered Slate matrix with a little light greenish Brochantite in association. 3½x2½x1½. £16; Specimen B - Rich, thin crystals of micro crystals of a pale, sky-blue, colour covering altered Slate matrix. 3½x2½x1½. £4.50; Specimen C - As specimen B - 2x2. £2.50.

68. PSEUDOMALACHITE. Kaboré, Katanga, Zaire. Choice, lustrous, deep green, cellular banded mass with large cavities lined with velvety crystallised Pseudomalachite thickly covering both sides of brownish Dolomite matrix. Very rich example of this mineral. 3½x2½x1½. £14.

69. PYRITES. Parnasqueira, Beira-Beixa, Portugal. Unusual, bright, brassy, highly modified crystals, mostly around ½ in size, attractively intergrown on massive Pyrites and associated with large, lenticular, tan coloured crystals of Siderite to ½ in size. 2½x1½x1½. £8.

70. PYRITES. Levant Mine, Peneden, Cornwall. Bright, metallic, brassy sharp single cubic crystals varying in size from 1 cm to 2 cm on edge, priced from 60p to £1.25 each depending on size.

71. PYROLUSITE. Sidi-Ayad, Midelt, Atlas Mts., Morocco. Bright, metallic grey, elongated needle crystals to ½ in length, thickly intergrown on an area 2x1½ on a matrix of Calcite/ massive grey Pyrolusite. 2½x2½. £6.50.

72. PYROMORPHITE. Broken Hill, Zambia. Select, pure, cellular, lustrous yellowish green mass of intergrown feathery hexagonal crystals. 2½x1½x1½. £11.
73. **PYROMORPHITE.** Wheal Alfred, Phillack, Cornwall. Lustrous, bright, transparent, pale yellowish green terminated hexagonal crystals to 5 mm. in size, thickly aggregated and scattered on Chaledonic Quartz. 3×2×1¼". £7.

74. **PYRRHOTITE.** Santa Bulaica, Chihuahua, Mexico. Choice, bright, brassy, sharp hexagonal crystals to ¾" in size, intergrown and aggregated on massive Pyrrhotite/Chalcopyrite matrix with a little transparent well crystallised Quartz, small lenticular light brown crystals of Siderite and bright metallic crystals of Galena in association. 3×2½". £17.

75. **QUARTZ.** Levent Mine, Penbeec, Cornwall. Lustrous, sharp, pyramidal crystals, mostly around ¼" in size, and of an unusual brownish red colour due to ferruginous inclusions thickly encrusting whitish Quartz. 2½×1¼". £3.50.

76. **QUARTZ.** Panasqueira, Beira-Beixa, Portugal. Specimen A - Very choice, sharp, elongated, transparent well terminated crystals ranging in length from ¼" - 1½" thickly intergrown and free-standing on matrix, with very minor aggregates of Muscovite mica in places. Very attractive display specimen - 4x3½". £22; Specimen B - A large, very sharp, terminated clear crystal 1½" long by 1¼" across the axis and with interesting inclusions of Pyrite and Wolframite implanted on a matrix of crystallised platy Zinnwaldite mica and associated with other smaller Quartz crystals. 2½×2×1¼" high. £10.

77. **QUARTZ.** Diamantina, Minas Gerais, Brazil. Sharp, transparent, well terminated slightly smoky single crystal with inclusions of rich, glistening, long neody crystals and rods of RUTILE. 1¼" long x 1×1" across the axis. £1.50.

78. **RENARDITE.** Mine In Faye, Grury, Saone et Loire, France. Light yellowish, well formed platy crystals richly aggregated and scattered on Limonitic gossanite matrix. 2×1¾". £3.25.

79. **RHODONITE.** Treburland Manganese Mine, Alternun, Cornwall. Pure, rich, bright pink, lustrous mass with minor blackish Pyrolusite in association. 3×2½". £2.25.

80. **ROSASITE.** Mina Ojuela, Mapimi, Durango, Mexico. Rich, light greenish blue radiated botryoidal masses and crystal tufts scattered over lustrous crystallised Calcite on brownish Limonite matrix. 3×2¼". £3.25.

81. **SCHOLOZITE.** Reapook Hill, Flinders Ranges, S. Australia. Superb, lustrous, creamy white, sharp elongated neody crystals mostly around ¼" in length, thickly lining a 3×2½" cavity in Limonitic matrix. 4×3×2½". £22.

82. **SIDERITE.** Boscan Mine, St. Just, Cornwall. Specimen A - Large, sharp, silky brown rhombic crystals to 1 cm. in size, thickly intergrown on Quartz. 2×1¼". £2.50; Specimen B - Lustrous brown, well formed rhombic crystals to 1 cm. in size, thickly intergrown on Quartz. Crystals are not quite so sharp, as Specimen A - 1¾×1¼". £1.50.

83. **SIDERITE.** Virtuous Lady Mine, Buckland Monochorum, Devon. Fine, lustrous, light tan coloured sharp lenticular crystals mostly around 1 cm. in size, thickly intergrown and encrusting a crystalised milky Quartz matrix. 4×2½". £11.

84. **SMITHSONITE.** Tsuneb, Otavi, S.W. Africa. Choice, lustrous, translucent, rose pink coloured sharp rhombic crystals to 5 mm. in size, thickly intergrown on cellular matrix. 1×1×1×1. £4.50.
85. **SPESSARTITE.** St. Marcel, Piedmont, Italy. Bright, light orangey brown, sharp, well formed, crystals to 1 cm. in size, aggregated and partially embedded in Calcite on massive Garnet matrix with odd other crystals sections of Spessartite in places. 3½x2¼". £3.25.

86. **SPHALERITE.** Scrathingle Mine, W. Alleghany, Northumberland. Choice, lustrous black, well formed crystals to 15 mm. in size, richly aggregated and scattered on a matrix of creamy intergrown curved crystals of Dolomite. 5x3¼". £8.

87. **SPHALERITE.** Joplin, Missouri, U.S.A. Light, orangey brown, large intergrown crystals showing much parallel growth and an interesting attractive iridescent sheen on their faces, implanted on Dolomite matrix with an area of bright, doubly terminated small crystals of Quartz in association. 3x2½x1½". £4.50.

88. **STEPHANITE.** St. Andreasberg, Harz, Germany. Small, very sharp, silvery grey, metallic crystals to 2 mm. in size, richly scattered on both sides of cellular crystalised Calcite matrix. 1½x1x1½". £11.

89. **STILBITE.** Oregon, U.S.A. Select, silky white, well formed, terminated crystal sheaves to 1½" in length, thickly intergrown on matrix. 4x2½x1½". £6.50.

90. **STILBITE.** Old Kilpatrick, Renfrewshire, Scotland. Lustrous, brick red, sharp, well terminated crystals to 5 mm. in size, forming a pure, intergrown mass. 1½x2½x1½". £2.75.

91. **STOLZITE.** Proprietary Mine, Broken Hill, N.S. Wales, Australia. Bright, orangey yellow, platy well formed crystals to 3 mm. in size, thickly intergrown and encrusting SilicicUne coated Quartz. 2½x1½x1½". £22.

92. **TENANTITE.** El Obre, Concepcion del Oro, Zacatecas, Mexico. Specimen A - bright, silvery grey, metallic, well formed crystals to 1 cm. in size, intergrown and scattered on both sides of milky crystalised Quartz matrix. 2½x1½x1½". £7; Specimen B - as Specimen A but with slightly fewer crystals, but a larger sized size specimen. 3½x1½x1½". £7.

93. **TETRAXYDITE.** Carrock Mine, Dalebeck, Cumberland. Select, bright, silvery grey, pure metallic crystal cleavages varying in size from ½" - 1½". Price from 0.60p to £1.65p each depending on size and quality.

94. **TETRAXYDITE.** Herdsfoot Mine, Lanreath, Cornwall. Choice, Chalcopyrite coated tetrahedral crystals to 1 cm. on edge, intergrown and partially embedded in bright slightly milky crystals of Quartz and small greyish metallic modified crystals of Galena on massive Quartz/Tetrahedrite veinstuff. 3½x2½x1½". £8.

95. **TETRAXYDITE.** Kapnik, Hunmania. Very sharp, bright silvery grey, tetrahedral crystals, mostly around 5 mm. in edge, attractively scattered and aggregated on large brownish black crystals of Sphalerite with much translucent well formed, elongated, milky crystals of Quartz in association. 3x2½x1½". £22.

96. **TOPAZ.** Rap Tin Mine, Jos, Nigeria. Choice, sharp, transparent, well formed terminated single crystals, varying in size from ½"x½" - 1x1" and priced from 80p to £1.75p each depending on sharpness and size.

97. **TORSBERNITE.** South Terras Mine, St. Stephens, Cornwall. Very rich, light green, platy crystals thickly encrusting Limonitic matrix and associated with minor liney yellow platy crystals of Autunite. 3½x2". £14.
98. **TÖBERNITE.** Wheal Bray, Alternun, Cornwall. Small, light green, platy, crystals and crystal aggregates aggregated on and in reddened and slightly silty Quartz matrix. 3½x2½x1½". £3.25.

99. **URANINITE.** Trenwith Mine, St. Ives, Cornwall. Pure, resinous black mass. Very rich example from one of the earliest Uranium producing mines in Cornwall. 1½x1½x1½". £2.50.

100. **VANADINITE.** San Carlos, Chihuahua, Mexico. Superb, translucent, sharp, terminated, bright orangey brown hexagonal crystals to 1 cm. in length, some showing a well developed skeletal structure, thickly scattered and intergrown on two sides of matrix, with odd small crystals of Calcite in association. Excellent for display. 3½x2x1½". £22.

101. **VARLANOFFITE.** Cligga Mine, Perranzabuloe, Cornwall. Very rich, light yellowish brown mass thickly covering greisen matrix. Specimen A - 3x2½". £2.50; Specimen B - 3x1½". £1.25.

102. **WAELLITE.** Hot Springs, Garland Co., Arkansas, U.S.A. Specimen A-Rich, light green, radiated botryoidal masses, some showing complete unbroken surfaces, to 1 cm. in diameter, aggregated and scattered on a brecciated chart matrix. 2½x2x1½". £3.50; Specimen B - Choice, light green, thick radiated crystal aggregates to ½" in diameter thickly aggregated on chart matrix. 2½x1½x1½". £2.50.

103. **WITHERITE.** Nentsberry Haggis Mine, Alston Moor, Cumberland. Unusual strongly etched hexagonal crystals showing much parallel growth and of a creamy white colour, to 1" in size, aggregated on massive Witherite. 3x2". £3.25.

104. **WOLFRAMITE.** Panasqueira, Beira-Beixa, Portugal. Specimen A - Choice, bright black, well terminated tabular crystals in parallel growth, showing strong striations down the crystal faces and associated with a little Muscovite and a 1 cm. sized translucent hexagonal sea-green coloured Apatite which is implanted on the termination of one of the Wolframite crystals. Size of the largest crystal is 2½x2" - overall size of the specimen is 2½x2½x2½". £22; Specimen B - Bright black, well terminated striated crystals in parallel growth. 1½x1½x1½". £7; Specimen C - As specimen B - but with the crystals not quite so well developed. 1½x1½x1½". £5.

105. **WOLFRAMITE.** Scorrier Wolfram Prospect, Scorrier, Cornwall. Pure, bright black, bladed mass. 2½x3½x1½". £1.50.

106. **WULFENITE.** Stephanie Mine, Mezica, Slovenia, Yugoslavia. Specimen A - Superb, bright, orangey platy tabular crystals forming a pure intergrown mass with very minor matrix attached. 4x2½x2½". £14; Specimen B - As specimen A - with the crystals ranging in size up to ½". 2½x2x2½". £8; Specimen C - As Specimen A - with the crystals ranging up to ½". 2x1½x1½". £4.50; Specimen D - Very bright, translucent orangey tabular crystals to 6 mm. in size, thickly intergrown on cellular matrix. 1½x1½x1½". £3.25. These specimens are from a recent find at Mezica and are amongst the best developed Wulfenites yet found from this classic location, all are very attractive for display.
Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

SEPTEMBER 1975

1. ANBITE. Longdons, Carnmenellis, Cornwall. Specimen A - Lustrous, creamy white, well formed twinned crystals to 5 mm. in size, richly intergrown on a 2x1" area on Pegmatite, with minor black rods of Tourmaline in association. 3x1/2". £1.75; Specimen B - Large, lustrous, creamy white bladed twinned crystals crystals to 1" in size, intergrown with minor Quartz on Pegmatite. 1x1/2". £1.25.

2. ANGLESITE. Monteponi, Iglesids, Sardinia. Specimen A - Choice, translucent, sharp well formed crystals to 1/4" in size, richly intergrown on cellular matrix with numerous smaller bright Anglesite crystals lining cavities. 2x1/2x1". £17; Specimen B - Large, sharp, creamy colored well terminated thick spear-like crystals to 1/4" in size, partially altered to Cerussite, thickly intergrown on cellular matrix. 2x1/2x1". £13.

3. APATITE. Ponasqueira, Biera-Belxa, Portugal. Specimen A - Select, very large, translucent to transparent, sharp, well formed, pale sea green crystal approximately 1/4" in size, implanted on Quartz matrix, with minor Muscovite mica and odd smaller Apatites in association. 2x1x1". £13; Specimen B - A sharp, very well formed, translucent sea-green hexagonal single, showing good terminations, with very minor matrix attached. 1/4" long x 1/4" across the axis. £4.50.

4. APATITE. Luxulyan, Cornwall. Small, sharp, hexagonal, pale yellowish green crystals scattered on portions of terminated creamy Orthoclase crystals. The Apatite crystals are mostly 1 - 2 mm. in size, and in some specimens are associated with a little Gilbertite and Tourmaline. Specimens from 2x1/2" - 1x1/2". 60p each.

5. APATITE variety FRANCOLITE. Fowey Consols Mine, Tywardreath, Cornwall. Bright, transparent, creamy white hexagonal crystals, thickly intergrown and lining a 1x1/2" cavity in Quartz veinstuff, with a slight dusting of small golden Pyrite crystals on the Francolite. 2x1/2x1/2". £3.25.
6. **ARSENOPYRITE.** Panasqueira, Beira-Beixa, Portugal. Specimen A - Superb, large, bright, silvery elongated terminated crystals to 2" in length, forming an intergrown group and dusted in places with small Pyrite crystals and minor light brown Siderite and small crystalline masses of Fluorite. 3x2". £11; Specimen B - Very bright, silvery, terminated crystals aggregated in parallel growth and associated with little tan coloured Siderite and odd small Calcite crystals. 2x1½". £7; Specimen C - A choice, bright, silvery, well terminated striated tabular crystal 1½" long x ¼" across the axis. £4.50.

7. **ARSENOPYRITE.** New Rosewarne Mine, Gwinear, Cornwall. Bright, metallic, silvery grey, well formed, crystals ranging in size from 2 - 5 mm. thickly lining large cavities in cellular massive Arsenopyrite. Interesting rich old specimen. 4½x2x1½". £7.

8. **AUTUNITE.** South Terras Mine, Grampound Road, Cornwall. Bright, light yellowish green platy crystals and scales thickly encrusting both sides of Quartz/Pitchblende matrix. Brilliant fluorescence under u.v. light. 2x1½". £2.75.

9. **BARYTES.** New Glenariff Mine, Wanlockhead, Dumfries. Sharp, well terminated, translucent to transparent creamy yellow wedge shaped crystals to 1" in size, aggregated in parallel growth on massive white Barytes. 3x2". £5.

10. **BARYTES.** Settlingstones Mine, Hexham, Northumberland. Choice, lustrous, creamy white, wedge shaped crystals ranging in size up to 1 cm. completely encrusting all sides of matrix, the shape of the specimen somewhat resembling a stalactite. 3x2x1½". £5.50.

11. **BERZELIITITE.** Bukov, Moravia, J.S.S.R. Select, rich, tarnished, metallic masses to ½" in size, thickly aggregated in creamy Dolomite matrix. Very rich specimen of this rare mineral. 2x1½x1½". £7.50.

12. **BISMUTHINITE.** Fowey Jonesols Mine, Tywardreath, Cornwall. Choice, bright, silvery grey, needly and bladed crystals, some slightly coated with Chalcopyrite, to ½" in length, thickly aggregated on cellular Chalcopyrite/Quartz/Pyrite veinstuff. 2½x2½x2½". £1.50.

13. **BORNITE.** Botallack Mine, St. Just, Cornwall. Very rich, solid, attractively tarnished metallic masses with minor Quartz in association. Choice rich specimens from one of Cornwall's best known copper mines. Specimen A - 3x2½x1½". £3.25; Specimen B - 2½x2½x1½". £1.50.

14. **CALCITE.** Millclose Mine, Nr. Matlock, Derbyshire. A very sharp, well formed, doubly terminated transparent to translucent scalenohedral crystal 2" in length implanted on a fragment of matrix with minor smaller Calcite crystals in association. Overall size: 2x1½". £2.75.

15. **CALCITE.** Levant Mine, Pendeen, Cornwall. Choice, lustrous, snow-white, fan shaped aggregates of crystals ranging in size up to ½" thickly intergrown and completely encrusting matrix. Very attractive specimen. 3½x2½". £6.50.

16. **CALCITE.** Stunk Mine, Ulverstone, N. Lines. Fine, sharp, well terminated transparent complexly formed crystals to ½" in length, thickly intergrown on matrix. Some of the crystals show a very attractive slight reddish colouration due to inclusions of Hematite. 2½x1½x1½". £11.
17. CARPHOLITE. Schlaggenwald, Bohemia, J.S.S.R. Rich, golden coloured, radiated, fibrous crystal masses, thickly encrusting greisen matrix. 1½x1½x1". £3.50.

18. CARPHOSIDERITE. Burra-Burra, Yorke Pen., S. Australia. Very rich, greeny-yellow masses, thickly encrusting both sides of ferruginous veinstuff. 2½x1½x1". £2.25.

19. CASSITERITE. Goss Moor, Roche, Cornwall. Choice, solid, slightly rounded alluvial pebble consisting of coarse brown crystalline Cassiterite intergrown with minor Quartz and fragments of Tournalised Slate. An old label is attached to the specimen, which was collected during operations on the Moor early last century. 2x1½x1½". £3.50.

20. CASSITERITE. Panasqueira, Beira-Beixa, Portugal. Specimen A - Fine, very sharp, bright black, doubly terminated crystals to 1 cm. in size, implanted on greisen matrix with minor Gilbertite mixed in association. 2x1½". £1; Specimen B - Sharp, bright black, twinned crystals mostly around ½" in size, intergrown and scattered on a crystalline mass of Arsenopyrite with minor Gilbertite in association. 1x½x½". £6.50.

21. CASSITERITE. La Villeder, Morbihan, Brittany, France. Specimen A - A large, dark reddish brown, translucent, twinned crystal, showing good crystal faces, with no attached matrix, 1x½". £5.50; Specimen B - A sharp, lustrous brownish black, well terminated elongated single crystal with a small Apatite crystal attached, ¾" long x½" across the axis. £5.50; Specimen C - A lustrous, orangy brown, sharp twinned crystal with no attached matrix - ¾x½". £4.50.

22. CASSITERITE. 312 Fm. Level, Dolcoath Mine, Camborne, Cornwall. Very rich, light brown, fine grained crystalline mass intergrown with bluish grey Tournalined quartz veinstuff. An old label attached to the specimen dates the sample as March 1870, Dolcoath Mine was the deepest and largest tin mine in Cornwall. 3½x2½x2½". £16.50.

23. CELESTITE. Girgenti, Sicily, Italy. Choice, lustrous, creamy white well terminated, sharp sprays of crystals from ¼ - ½" in length, completely covering matrix and associated with odd yellowish masses of crystalline native Sulphur. Fine specimen for display. 6x5½". £16.50.

24. CERULEITE. Wheal Gorland, St. Day, Cornwall. Rich, light, sky blue, fibrous crystalline masses lining small cavities in gossan Quartz veinstuff. Specimen A - 2½x1½". £6.50; Specimen B - 1½x1½". £3.50; Specimen C - 1½x1½". £2.50.

25. CERUSSITE. Tsumeb, Otavi, S.W. Africa. Choice, sharp, lustrous, glassy, transparent crystals, some showing "sixling" twinning, to ¾" in size, thickly intergrown and encrusting cellular matrix. 3½x2x1½". £17.

26. CERUSSITE. Leadhills, Lanarkshire, Scotland. A large, complexly twinned, dark creamy coloured lustrous crystal 1½x1½" in size, with minor slaty matrix attached. Overall dimensions 2½x1½". £7.75.

27. CHABAZITE. Dean Quarry, St. Keverne, Lizard, Cornwall. Small, sparkling, creamy coloured crystals thickly encrusting and replacing hollow elongated crystals of Natrolite with minor Stilbite and Calcite in association, all on a coarse gabbro rock. 2½x2½". £1.65.
28. CHALCOCITE. Cooks Kitchen Mine, Camborne, Cornwall. Specimen A - Choice, large, platy hexagonal crystals completely altered to large iridescent Bornite. The crystals range in size up to 1 cm. and form a pure intergrown cellular mass. 2½x1¼x1¼". £8; Specimen B - Thin, platy, hexagonal crystals mostly completely replaced by iridescent Bornite thickly intergrown on Bornite/Quartz veinstuff. 1¼x1¼x1¼". £5.50; Specimen C - As Specimen B- 1¼x1¼". £3.25; Specimen D - 1¼x1¼". £2.50.

29. CHALCOPYRITE. South Corn Brea Mine, St. Cleer, Cornwall. Very rich, brightly coloured, iridescent mass of the "Peacock Copper" variety with very minor Fluorite in association. 3¾x3¼x1¾". £5.50.

30. CHALCOPYRITE variety Blister Copper. South Corn Brea Mine, Illogan, Cornwall. Select, bright, golden coloured botryoidal mass, the surface composed of numerous small botryoids all covering massive Chalcopyrite. 3¾x2½x2". £9.

31. NATIVE COPPER. Corn Brea Mine, Illogan, Cornwall. Choice, pure, masses composed of numerous small sharp spiky crystals, some showing dendritic forms and of an attractive dark coppery red colour. Specimen A - 4x2½x1". £11; Specimen B - 3½x1½x1½". £4.50; Specimen C - pure crystalline pieces approx. 1" in size. 80p. each.

32. CUPRITE. Ting Tang Mine, Gwennap, Cornwall. Rich, deep maroon coloured mass with numerous small cavities lined with small sharp octahedral crystals. 3¼x1¾x1½". £7.75.

33. CUPRITE. Phoenix Mine, Linkinhorne, Cornwall. Pure, solid, deep red, lustrious mass with small cavities lined with bright, sharp, complexly formed crystals ranging in size up to 4 mm. 2¼x1¼x1¼". £7.75.

34. CUPRO-ADAMITE. Tsumeb, Otavi, S.W. Africa. Lustrous, line green, sharp crystals, to 4 mm. in size, thickly lining cavities in cellular matrix. 1½x1¼x1¼". £3.50.

35. DIOPTASE. Tsumeb, Otavi, S.W. Africa. Very bright, small, sharp, emerald green crystals, thickly encrusting a matrix of intergrown sharp rhombs of Calcite. Very attractive specimen. 2x1¼x1¼". £5.25.

36. DOLOMITE. Smalldoubh Mine, Nethead, Cumberland. Lustrious, creamy white saddle shaped rhombic crystals thickly encrusting line stone and with a 1 cm. sized bright greyish cubic crystal of Galena implanted on Dolomite. 2½x2½x2½". £1.50.

37. EPIDOTE. Campegli, Liguria, Italy. Choice, very sharp, olive green crystals to ½" in size, thickly intergrown and associated with numerous bright, transparent, well-formed terminated crystals of Quartz to ½" in length, all encrusting matrix. 3¼x3½x3½". £2.50.

38. EPIDOTE. Montjouct, Val d'Acosta, Piedmont, Italy. Large, well-formed, translucent olive green crystals to ½" in size, intergrown and scattered on Schistose matrix and associated with greyish green cristobaline masses of Diopside. 4½x3¼x3¼". £11.

39. ERYTHRITE. Bou Azzer, Anti-Atlas, Morocco. Superb, bright, raspberry red coloured, thick, bladed, terminated crystals to 1 cm. in size, richly scattered and intergrown in large cavities in massive grey Sutterrandite matrix. 2½x1½x1½". £27.

40. EUDIALYTE. Norra Karr, Ostergotsland, Sweden. Choice, rich, lustrious, pinkish red masses aggregated and scattered in Syenite matrix with minor amounts of light yellowish ROSENBUSCHITE in association. Specimen A - 3½x2½x1½". £4.50; Specimen B - 3x2½x1½". £2.75; Specimen C - 2½x2½x1½". £2.50.
3. ELYTINE, Schneeberg, Saxony, Germany. Small, lustrous, glassy crystals richly scattered on and encrusting cellular quartz gossen. Rich specimen of this rather rare supergene Bismuth mineral. 3x2½". £11.

42. FALKMANTE. Boliden Mine, Skellefte District, Sweden. Rich, silvery grey metallic bladed masses embedded in massive grey Kabloellite with x½ small flakes of Native Gold. 2¼x1½". £8.

43. FLUORITE. Boltburn Mine, Rookhope, Co. Durham. Choice, large, sharp, cubic, light purple transparent to translucent interpenetrating twinned crystals with odd small 'nail head' Calcite crystals scattered on the side of one of the crystals. Crystal faces each approx. 2½" in size. Overall size of the specimen, 3½x3x2". £11.

44. GALENA. Eyan, Derbyshire. Sharp, metallic grey, well formed, octahedral crystals with face edges to ½" in size, forming an intergrown mass and partially encrusted with small sharp, terminated, transparent crystals of Calcite. 3x1½". £8.

45. GALENA. Leadhills, Lanarkshire, Scotland. Fine, very large, sharp, cubic crystals of an attractive bright lead grey colour, the faces showing a little parallel growth, forming a select intergrown group, with very minor Quartz attached to the reverse of the specimen. Excellent specimen from this old lead producing area. 6x4½x3". £22.

46. GALENA. Great Saxey Mine, Isle of Man. Choice, bright, lead grey, modified cubic-octahedral crystals of 1½" in size, thickly intergrown and scattered on Slaty matrix, with x½ small crystals of Sphalerite in association. 6½x4½x2½". £17.

47. GILBERTITE. Tregarns Quarry, St. Stephen, Cornwall. Pure, bright, platy, golden, crystallised mass with minor creamy Orthoclase in association. 2½x2x1¼". £2.50.

49. GROSSULARITE variety HESSONITE. Val d’Ala, Piedmont, Italy. Specimen A - Very bright, transparent, sharp, orangey red crystals from 2 - 3 mm. in size, richly encrusting matrix. 3x1½x1½". £5.50; Specimen B - Choice, bright, translucent, sharp, orangey red crystals to ½" in size, scattered and implanted on matrix with crystalline aggregates of Chlorite in association. 2½x1½". £4.50; Specimen C - As Specimen B - 1½x1½", £3.25; Specimen D - Small, sharp, transparent, sparkly orange crystals thickly encrusting matrix. 1½x1½". £1.75; Specimen E - Bright, transparent, orangey, small sharp crystals thickly encrusting both sides of matrix with odd small crystals of Diopside in association. Choice specimen for jewellery making. ½x½". £1.50.

50. HEMATITE. Rio Marinz, Isle of Elba, Italy. Specimen A - Very bright, sharp, black, wellformed crystals to 1 cm. in size, intergrown and scattered on a pure mass of crystalline Hematite. 2½x1½x1½". £3.75; Specimen B - As Specimen A - 1½x1½x1½". £3.25; Specimen C - As Specimen A - but with crystals to ½" in size - 1¼x1½x1½". £2.50.

51. HEMATITE variety 'KIDNEY O.E'. Florence Mine, Egremont, Cumberland. Specimen A - Choice, lustrous, brownish red botryoidal mass with a larger 2½" sized botryoid standing proud of the rest of the specimen. 3x3½x3½". £3; Specimen B - Choice, bright, botryoidal mass, the botryoids covering both sides of the specimen. 3½x2½x1½". £5.50; Specimen C - Lustrous, bright, dome shaped botryoidal mass. 2½x1½x1½". £2.25.
52. HEMIMORPHITE. Broken Hill, Zambia. Specimen A - Lustrous, sharp, transparent, small glassy crystals completely encrusting large terminated tabular CERUSSITE crystals to 1½" in length, thickly intergrown on massive Cerussite. 3½x2½x2". £22; Specimen B - Small, lustrous, well formed crystals aggregated in sprays and scattered on a glassy reticulated mass of crystalised Cerussite. 2½x1½x1½". £5.50.

53. HYDROCEUSSITE. Mendip Hills, Somerset. Choice, rich, lustrous, creamy white bladed crystal mass 1" in size, embedded in Pyrolusite matrix with minor Calcite in association. 3x2x1½". £8.

54. JACOBSITE. Langban, Vemmland, Sweden. Very rich, lustrous black masses thickly aggregated in granular Calcite matrix. 2½x2x1½". £3.75.

55. LEPIDOLITE. Varutask, N. Sweden. Choice, lavender coloured, sharp, hexagonal crystal sections to 1 cm. in size, thickly aggregated and scattered in Pegmatite with minor associations of Tourmaline. Rich and interesting specimens of this mineral. Specimen A - 3½x3". £2.25; Specimen B - 2½x2x1½". £2.75; Specimen C - 2x1½x1⅛". £2.25; Specimen D - 2¼x1½x1¼". £1.25.

56. LIROCONITE. Wheal Unity, Gwennap, Cornwall. Select, lustrous, greenish blue, small well formed crystals richly aggregated in cavities in milky vein Quartz. 3x1½". £8.

57. MAGNETITE. Traversella, Piedmont, Italy. Choice, bright, very sharp, black octahedral crystals to 1 cm. in size, thickly intergrown on and partially embedded in talc matrix. 2½x2⅛". £6.50.

58. MALACHITE. Mzhne-Tagilsk, Ural Mts., Russia. Bright green, well banded, pure mass which has been cut and polished to show the structure to best advantage. 2½x1⅛". £4.

59. MARCASITE. Folkstone, Kent. Sharp, light, brassy, metallic spear-shaped crystals to 1 cm. in size, partially embedded in and protruding from greyish chalk marl. 2½x1½". £2.50.

60. MAUCHERITE. Sudbury, Ontario, Canada. Select, pure, slightly tarnished, brassy metallic mass. 2½x2x1½". £4.50.

61. MOLYDENITE. Watercut Mine, Kingsgate, N.S. Wales, Australia. Superb, brilliant lead grey hexagonal crystal plates and foliated masses to 2½" in size thickly aggregated and embedded in Quartz matrix. Excellent rich specimen. 3½x3x1⅛". £16.50.

62. MONTROYDITE. Abbadia San Salvatore, Monta Amiata, Tuscany, Italy. Very rich light red crusts of micro crystals thickly covering both sides of a matrix of intergrown small octahedral Pyrite crystals. 1⅛x1¼x1¼". £12.

63. OSUMILITE. Monte Arci, Sassari, Sardinia. Small, sharp, well formed bluish black crystals mostly around 2 mm. in size, scattered on cellular matrix. 3½x2". £5.

64. ORPIMENT. Quirivulca Mine, Libbertad, Peru. Lustrous, light, orangey sharp crystals aggregated in sprays ranging up to ½" in size, richly intergrown and scattered on Quartz/Pyrite matrix, with odd small crystals of Barytes and micro grey Emargite crystals in association. 4½x2½x1⅛". £17.

66. **PHARMACOLITE.** Gate Gottes Mine, St. Marie aux Mines, Vosges, France. Radiated sprays of delicate needle-like white crystals thickly aggregated in a 1" area and scattered on matrix, with a little Native Arsenic in association. 3x2½". £4.50.

67. **PHARMACOSIDERITE.** Wheal Gorland, St. Day, Cornwall. Lustrous, small light green sharp cubic crystals scattered on and encrusting Quartzose gossan. Specimen A - 2x2" - very rich in Pharmacosiderite - £6.50; Specimen B - 2 x 1½". £3.25; Specimen C - 1½x1". £2.75.

68. **PYRITES.** Govorrano Mine, Tuscany, Italy. Specimen A - Fine, very bright, sharp, brassy, cubic crystals to ½" in size, thickly intergrown on massive Pyrites. 3x2½". £6; Specimen B - As Specimen A - with crystals to ½" in size, 2½x2". £4.

69. **PYROMORPHITE.** Roughtengill Mine, Sawrey Flats, Cumberland. Choice, lustrous, bright green, elongated tapering crystals to 6 mm. in length, richly aggregated and scattered on a matrix of hexagonal milky Quartz crystals. Attractive old time specimen. 3½x2½". £8.

70. **PYROMORPHITE.** Proprietary Mine, Broken Hill, N.S. Wales, Australia. A choice, pure, intergrown mass of lustrous light brown, slender tapering crystals, mostly forming divergent sprays, to 1" in length. 2½x2¼". £13.50.

71. **PYROMORPHITE.** Vassel, Massif Centrale, France. Very rich, lustrous, light green, small hexagonal crystals thickly encrusting Quartz matrix. Specimen A - 3½x3½". £13; Specimen B - 3x1x1½". £5.50.

72. **QUARTZ** variety MOLYON. Crystal Peak, Teller Co., Colorado, U.S.A. A choice, sharp, deep smoky, translucent, well terminated single hexagonal crystal. 4" long x1½" across the axis. £11.

73. **QUARTZ** variety ROCK CRYSTAL. Panaquiera, Beira-Beixa, Portugal. A superb specimen consisting of large, very sharp, terminated, transparent elongated hexagonal crystals ranging in size up to 3" in length and completely encrusting matrix. The crystals all protrude upward from the matrix with three major crystals standing proud of the others. There is virtually no damage to the sample and there is a very faint dusting of small Pyrite crystals in places. Excellent specimen for cabinet or museum display. 6x6x3" overall dimensions. £80.

74. **SCAPOLITE.** Bancroft, Ontario, Canada. Specimen A - Well formed, creamy white, crystals to ½" in size, thickly intergrown on matrix with lustrous sharp, deep brown, SPHENE crystals to 1" in size in association. 3½x2½". £6.50; Specimen B - A pure, intergrown group of large creamy white, well formed, terminated crystals, to 1" in size, 2½x2½". £4.50.

75. **SIDERITE.** Wheal Crebor, Nr. Tavistock, Devon. Large, lustrous, tan coloured, sharp lenticular crystals to ½" in size, aggregated on Quartz and associated with numerous slender milky Quartz crystals. 2½x2x1½". £2.50.

76. **SMITHSONITE.** Tsumeb, Otavi, S.W. Africa. Choice, lustrous, light pinkish yellow, very sharp, rhombic crystals to 1 cm. in size, thickly intergrown and encrusting Sulphide matrix. Specimen A - 5½x1½", £14.25; Specimen B - 2½x2x1½". £6.50; Specimen J - With crystals to ½" in size. 2x1½x1½". £4.50.
77. **SPECULITE.** Florence Mine, Eremont, Cumberland. "Specimen A - Choice, brilliant, sparkling black, sharp platy crystals thickly encrusting Hematite matrix with the reverse of the specimen completely encrusted with sharp, transparent, lustrous, doubly terminated, Quartz crystals to 6 mm. in size, with a dusting of Speculite. Very spectacular specimen for display. 5½x3¾". £17; Specimen B - Choice, bright black, sparkling platy crystals thickly encrusting botryoidal Hematite. 3x2½". £7; Specimen C - Bright black, sparkling platy crystals completely encrusting botryoidal Hematite with minor creamy Dolomite in association. 2½x1¾". £4.50.

78. **SPhALERITE.** Poncesquira, Beira-Beixa, Portugal. Lustrous, striated black, sharp crystals to 1 cm. in size, thickly intergrown on crystalised Gilbertite mass with minor amounts of light brown lenticular Siderite crystals and blades of Arsenopyrite in association. 3½x1½x1½". £11.

79. **SPHALERITE.** Nantberry Haig's Mine, Nr. Alston, Cumberland. Very bright, small sharp, deep reddish brown, translucent crystals thickly encrusting Limestone. Specimen A - 2x2x1¼". £4.50; Specimen B - 2½x2x1½". £3.25.

80. **SPHALERITE.** New Glencrief Mine, Wanlockhead, Dumfries, Scotland. Fine, lustrous, deep brownish black, large crystals to 1¼" in size, thickly intergrown on massive Sphalerite with odd transparent, slightly milky bright, doubly terminated Quartz crystals to 1 cm. in size, scattered on the Sphalerite crystals. 5½x5". £16.50.

81 **STANNITE.** East Pool Mine, Illogan, Cornwall. Pure, metallic, attractively tarnished mass with very minor amounts of silvery Arsenopyrite in association. 2¼x1¼x1". £2.25.

82. **STIBNITE.** Iyo Province, Saka, Japan. A bright, steely grey, deeply striated section of a large crystal showing some good faces and a slight 'twist'. 2¾" long x ½" across the axis. £3.25.

83. **TARNOWITZITE.** Tsumeb, Otavi, S.W. Africa. Lustrous, zoned, creamy coloured, sharp well formed crystals, some being doubly terminated, mostly around 1½" in size, thickly intergrown and encrusting Dolomite matrix. 3x2¼". £7.75.

84. **TEALITE.** Popo, Oruro, Bolivia. A pure bright, greyish black, platy crystalline metallic mass. 1x¾". £4.50.

85. **THOMSONITE.** Kilpatrick Hills, Dumbarton, Scotland. Bright, translucent, creamy well terminated sharp crystals to 3 mm. in size, thickly encrusting Basalt matrix. 3x2". £4.50.

86. **TILASITE.** Längban, Värmland, Sweden. Rich, light, pinkish-orange granular masses, showing a bright orange fluorescence under short wave u.v. Specimen A - 2½x2x1¼". £2.75; Specimen B - 2¼x1¾". £1.75.

87. **TOPAZOLITE (variety of Andrédite).** Rocch Miet, Val d'Aia, Piedmont, Italy. Specimen A - bright, transparent, small yellowish, sharp crystals richly scattered and encrusting matrix. 1½x1½". £3.25; Specimen B - Lustrous bright, yellowish crystals to 3 mm. in size, aggregated on matrix. 1½x1½". £2.25.

88. **TURQUOISE.** Hensbarrow Claywork, Nr. St. Austell, Cornwall. Very rich, light turquoise blue mass associated with very minor fragments of Quartz and kaolinitised granite. 4½x3x1½". £4.50.
89. VANADINITE. Apache Mine, Mr. Globe, Gila Co., Arizona, U.S.A.
Bright, orangey red, small sharp hexagonal crystals to 3 mm. in size, thickly encrusting and scattered on matrix. The crystals encrust three sides of the specimen and the reverse side shows box scattered crystals. 4x3½x1½". £9.

90. WILLEMITE. Tsamet, Otavi, S.W. Africa. Specimen A - Very choice, lustrous, translucent to transparent, sharp well formed crystals mostly around 2 - 3 mm. in size, completely encrusting all sides of cellular matrix with areas of light, yellowish, elongated Minetite crystals and small tufts of greenish Malachite in association. 4x2½x2", £16.50; Specimen B - As Specimen A - 2½x1½". £6.50; Specimen C - As Specimen A - but without any Malachite or Minetite in association. 1½x1½". £4.50.

91. WITHERITE. Baldowfield Mine, Hexham, Northumberland. Choice, sharp, creamy white large pseudo-hexagonal crystals to ½" in size, thickly intergrown on massive Witherite. 2½x1½x1½". £9.

92. WITHERITE. Settlingstone Mine, Hexham, Northumberland. A crystalised mass of lustrous, creamy white, Witherite completely encrust with small bright, complex, Selenite crystals. 2x1½x1½". £3.25.

93. WOLFRAMITE. Penmsequeira, Beira-Beixa, Portugal. Very fine group of bright black, well formed, terminated, striated tabular crystals in parallel growth with a slight encrustation in places of small bright brassy Pyrite crystals and a little Gilbertite in association. 2¼" long x 2" across the axis x1½". £2.45.

94. WOLFRAMITE. Chigga Mine, Perranzabuloe, Cornwall. Lustrous, black, thick bladed crystal masses richly aggregated and embedded in Quartz. Specimen A - 3½x2½x1½". £3.25; Specimen B - 2x2¼x1½". £2.25.

95. WOLFRAMITE. Goonbarrow, Skywork, Bugle, Cornwall. Rich, bright black bladed mass intergrown with a little Quartz and needle black Tourmaline. 2½x2x1½". £1.50.

96. WULFENITE. Tsamet, Otavi, S.W. Africa. Choice, translucent, lustrous, very sharp, light honey coloured tabular crystals to ½" in size implanted on a cellular Hematite matrix. 2½x2½". £12.

97. WULFENITE. Helena Mine, Schortzenbach, Carinthia, Austria. Lustrous, light orangey, sharp, well formed thin tabular crystal to ¼" in size, richly encrusting Dolomite matrix. 2¼x2½". £9.

98. METH-ZEUNERITE. Wheal Edward, St. Just, Cornwall. Bright, light green, small, very sharp, platy crystals richly encrusting a large 1½x1½" cavity in Quartz, with minor light blue Chrysocolla in association. 2½x2½". £8.

99. ZINCITE. Franklin, Sussex Co., New Jersey, U.S.A. Select, very rich, lustrous, deep red masses intergrown with white Selenite and salt spots of black Franklinite. Specimen A - 2¼x1½x1½". £3.25; Specimen B - 1½x1½". £1.65.
Tel. No.: St. Just 880
(073 677) V.A.T. No.: 132-7852-67

ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

OCTOBER 1975

1. **ADAMITE.** Mina Ojuela, Mapimi, Durango, Mexico. Specimen A - Superb, lustrous, transparent lime green coloured radial sprays of well formed terminated crystals, to 1 cm. in size, with the sprays of crystals attaining 2 cm. in size, richly encrusting and scattered on a convoluted Limonite matrix. 4x3x2". £23; Specimen B - Lustrous, light olivine-green sharp well formed crystals, mostly around 2 - 3 mm. in size, completely encrusting Limonite matrix, with odd sharp white crystals of Calcite in association. 4x3". £14.

2. **ANALCIME.** Talisker, Isle of Skye, Scotland. Lustrous, very sharp, translucent crystals to 5 mm. in size, thickly intergrown and completely encrusting Basalt. 4x3½". £7.

3. **ANGLESITE.** Bage Mine, Cromford, Derbyshire. Choice, elongated sharp, translucent, light coffee coloured bladed crystals, to over 1½" in length, intergrown on Galena. 1x1½". £6.50.

4. **APATITE.** Ehrenfriedersdorf, Saxony, Germany. Select, bright, light purply coloured, sharp hexagonal crystals to 1 cm. in size, scattered on small elongated Quartz crystals with a little deep purple Fluorite on Quartzose matrix. The base of the specimen has been sawn flat so that it displays to best advantage. Interesting old time specimen. 3x2½x2½" high. £9.

5. **ARSENOPYRITE.** Penasqueira, Beira-Beixa, Portugal. Superb, very large, sharp, silvery, crystals to 1½" in size, associated with transparent well formed terminated Quartz crystals to 1½" in length, all covering a Chlorite matrix, with a little Sphalerite in association. Choice for display. 5½x3½x2" high. £54.

6. **ARSENOPYRITE.** Virtuous Lady Mine, Buckland Monachorum, Devon. Fine, silvery coloured, sharp crystals to 1 cm. in size, thickly intergrown in parallel growth on massive Arsenopyrite. The specimen was collected early last century. 2½x1x1½". £8.

<tbody>
<tr>
<td>7.</td>
<td><strong>AZURITE.</strong> Moldowa, Banat District, Hungary. Choice, lustrous, bright blue crystals, mostly around 5 mm. in size, attractively scattered in large cavities in cellular Limonitic gossan. 3x2&quot;. £12.</td>
</tr>
<tr>
<td>8.</td>
<td><strong>AZURITE.</strong> Crowell Creek, Nr. Cobar, N.S. Wales, Australia. Lustrous, bright blue, small well formed crystals, richly encrusting a white matrix with traces of green Malachite in association. 2½x1½&quot;. £5.50.</td>
</tr>
<tr>
<td>9.</td>
<td><strong>BARYTES.</strong> Frisington, W. Cumberland. Choice, transparent, sharp, perfectly formed, well terminated elongated tabular crystals of a pale watery green colour, ranging in length up to 1&quot;, scattered and intergrown on crystallised creamy Dolomite matrix, with a little Calcite in association. 4½x2¼&quot;. £22.</td>
</tr>
<tr>
<td>10.</td>
<td><strong>BARYTOCALCITE.</strong> Nentsberry Hagg's Mine, Alston Moor, Cumberland. Very fine, sharp, translucent light coffee coloured crystals to ⅛&quot; in size, aggregated in parallel growth and intergrown on a 2x1¼&quot; area on radiating creamy white Witherite. 3½x2¼&quot;. £11.</td>
</tr>
<tr>
<td>12.</td>
<td><strong>BERYL variety EMERALD.</strong> Habachtal, Nr. Salzburg, Austria. A well formed, translucent, emerald green, elongated hexagonal crystal 9 mm. in length, implanted on Mica Schist. 2½x1½&quot;. £4.50.</td>
</tr>
<tr>
<td>13.</td>
<td><strong>NATIVE BISMUTH.</strong> Wolfram Camp, Queensland, Australia. Choice, pure, elongated, crystal mass the exterior showing alteration to creamy yellow BISMUTHITE. 3¼&quot; long x approx.1&quot; wide. £12.</td>
</tr>
<tr>
<td>14.</td>
<td><strong>BOTRYOGEN.</strong> Libiola, Liguria, Italy. Fine, bright, orangey, sharp crystals mostly around 2-3 mm. in size, forming an intergrown mass with minor yellowish Limonite. 3⅜x2⅛&quot;x2&quot;. £12.</td>
</tr>
<tr>
<td>15.</td>
<td><strong>BRACHANTITE.</strong> Phoenix Mine, Linkinhorne, Cornwall. Bright green, small sharp crystals richly scattered on and encrusting Hematite veinstuff. 2½x2⅛&quot;. £2.50.</td>
</tr>
<tr>
<td>16.</td>
<td><strong>CALCITE.</strong> Herod'sfoot Mine, Lanrath, Cornwall. Fine, creamy white, lustrous &quot;nail head&quot; crystals aggregated in parallel growth to form crystals ranging up to ¾&quot; in size, thickly encrusting bright, translucent, Quartz crystals on Quartz/Galena matrix. Specimen A - 6x4x2½&quot; - Excellent for display - £1½; Specimen B - with the crystals ranging up to 1&quot; in size - 2¼x1¾x1½&quot;. £6.50.</td>
</tr>
<tr>
<td>17.</td>
<td><strong>CALCITE.</strong> Panasqueira, Beira Baixa, Portugal. Choice, creamy white, lustrous crystals to 1&quot; in length intergrown and scattered on a matrix of intergrown elongated, well formed, transparent Quartz crystals, with a slight dusting of small bright, Pyrite cubes on the Calcite. 3½x2½x1⅛&quot;. £11.</td>
</tr>
<tr>
<td>18.</td>
<td><strong>CALCITE.</strong> Bigrigs, Nr. Egremont, W. Cumberland. Select, translucent to transparent, sharp, elongated, well terminated &quot;nail head&quot; crystals to over 1&quot; in length, thickly intergrown on Limonite matrix. 3x1¾x1⅛&quot; high. £12.</td>
</tr>
<tr>
<td>19.</td>
<td><strong>CASSITERITE.</strong> Polberro Mine, St. Agnes, Cornwall. Bright, well formed, blackish brown crystals to ¼&quot; in size, richly intergrown and scattered on Quartz/Slate veinstuff. 3x1½&quot;. £7.</td>
</tr>
</tbody>
</table>
20. CASSITERITE. Quarry Lode, Kit Hill Mine, Callington, Cornwall. Choice, very rich, mass composed of numerous, bright blackish well formed crystals and lustrous masses, thickly intergrown with Chlorite and Muscovite mica. The crystals range up to 5 mm. in size. 4½x3½x3". £14.

21. CELESTITE. Agrigento, Sicily, Italy. Specimen A - Select, lustrous, whitish, terminated crystals intergrown to form a large crystal spray 1" x ⅜" on Sulphur matrix, with minor smaller crystals in association. Overall size 1x1½". £2.50; Specimen B - Lustrous, translucent whitish crystals, mostly around ¾" in length, thickly aggregated on a 1x1" area on Sulphur matrix. 2x1". £2.25.

22. CEUTISITE. Tynagh Mine, Co. Galway, Eire. Choice, pure, lustrous white, masses of intergrown, elongated "jack-straw" crystals. Specimen A - 3½x3½x2½". £7; Specimen B - 2¼x2½x1¼". £4.50; Specimen C - 3x1½x1¼". £2.25.

23. CHALCOCITE. Levant Mine, Pendeen. Cornwall. Pure, very rich, lustrous metallic grey mass, with minor reddish Heamatite in association. Superb rich specimen from one of Cornwall's richest copper mines. 3½x2½x2½". £6.50.

24. CHALCOPYRITE. Wheal Primrose, St. Agnes, Cornwall. Bright, brassy, metallic, well formed crystals to ⅛" in size, richly intergrown on a ⅛x1½" area on Slate matrix. 3x1¼x1¼". £6.50.

25. CHALCOPYRITE. Tincroft Mine, Illlogan, Cornwall. Unusual, brigh brassy, lenticular shaped crystals to 1¼ mm. in size, intergrown and scattered on Quartz veinstuff with small light brown crystals of Siderite in association. 1½x1½x1½". £5.

26. CHALCOPYRITE variety "BLISTER COPPER". Cooks Kitchen Mine, Camborne, Cornwall. Specimen A - Pure, light brassy, botryoidal mass of interesting shape, with odd areas of light grey micro Tennantite crystals. 2½x1½x1½". £5.50; Specimen B - As Specimen A - 1½x1½x1½". £3.25.

27. CHALCOSITIBITE. Rar-el-Anz, Cherrat Wadi, E. of Casablanca, Morocco. Choice, lustrous, metallic grey, striated tabular crystal mass, approx 1" in size, with a slight surface alteration to bluish Azurite, embedded in mudstone matrix. 1½x1x1½". £11.

29. CHRYSOCOLLA. Redgill Mine, Calbeck, Cumberland. Pure, bright, bluish green mass with odd specks of Chalcopyrite and Quartz. Very colourful specimen. 2½x1¼x1¼". £1.25.

30. CUPRITE. Wheal Virgin, Gwennap, Cornwall. Dark maroon coloured, well formed octahedral crystals, mostly around 2 - 3 mm. in size, thickly intergrown and encrusting both sides of a sheet of Native Copper. 3½x2½". £7.

31. CUPRITE. North Wheal Basset, Illlogan, Cornwall. Bright, dark maroon coloured, sharp octahedral crystals to 3 mm. in size, forming a pure cellular intergrown mass. 2½x1½x1½". £8.

32. CUPROSKLODOWSKITE. Mubondo, Katanga, Zaire. Specimen A - Pure, rich, line green coloured mass, with odd small areas of small, needly crystals, 2½x2½". £9; Specimen B - Pure, rich, line green coloured mass, with odd small crystalline areas, and associated with small veinlets and masses of darker green VANDEMRANDSTE and light yellowish patches of micro crystallised GULLERDITE. 2x1½x1½". £9.
33. DESCOISITE. Berg Aukas, Otavi, S.W. Africa. Specimen A - Superb, pure mass, of lustrous, deep orangey brown, sharp well formed crystals ranging in size up to ¾". Excellent specimen of this mineral for display. 4x3½x2½". £22; Specimen B - As Specimen A - with the crystals ranging up to ¾" in size, and of a darker brown colour. 2½x2x1½". £9.

34. DOLOMITE. Wynham Mine, Brecon, Cumberland. Lustrous, coffee brown coloured, sharp, rhombic crystals to ¼" in size, thickly intergrown and completely encrusting a cellular Hematite/Dolomite matrix. 5½x3½x2½". £9.

35. DOLOMITE. New Glencrief Mine, Wanlockhead, Dumfries. Lustrous, creamy white, saddle shaped crystals, thickly encrusting matrix and with sharp, doubly terminated, whitish crystals of Calcite to ¼" in length and odd black Sphalerite crystals implanted on the Dolomite. 2x1½x1¼". £3.25.

36. DOLOMITE. Bagui, Navarre, Spain. Large, sharp, transparent to translucent, rhombic crystals to ¼" in size, forming an intergrown group. 1½x1½". £4.50.

38. FERROMOLYBDITE. Little Cottonwood Canyon, Salt Lake Co., Utah, U.S.A. Very rich, bright, canary yellow masses, intergrown with Quartz and small metallic scales of Molybdenite. 2½x1½x1¼". £4.50.

39. FLUORITE. Allenheads Mine, Allenheads, Northumberland. Specimen A - Choice, completely transparent, sharp, cubic crystals of a light greyish green colour intergrown and scattered on smaller Fluorite crystals with odd bright black crystals of Sphalerite to ¼" in size all encrusting Limestone matrix, with the reverse of the specimen covered with small creamy white saddle shaped crystals of Dolomite. 6¼x4¼". £22; Specimen B - Choice, completely transparent, light greyish green sharp cubic crystals to ½" in size, thickly intergrown and encrusting Limestone, with a slight encrustation of creamy Dolomite on one side of the specimen. 5x3½". £16.50; Specimen C - As Specimen B - with the crystals being slightly smaller, ranging to 1 cm. in size. 2½x1½x1¼". £4.50. All are choice, unusual, specimens from a new discovery.

40. FLUORITE. Boltsburn Mine, Hockhope, Co. Durham. Transparent, light pinkish purple, sharp, single cubic crystal showing internal colour zoning and with odd small Calcite crystals encrusting one face. 1x1x1". £2.25.

41. GALENA. Blackdene Mine, Weardale, Co. Durham. Choice, very bright, metallic grey, sharp, cubic crystal 1x1x1" in size, implanted on and standing proud of cellular Limestone matrix which is partially encrusted with small colourless Fluorite crystals and odd small brassy crystals of Pyrite. 4x2½x2½" high. £9.

42. GOETHITE. Betallack Mine, St. Just, Cornwall. Select, very rich, banded, radiated, fibrous masses thickly intergrown with a little Quartz. Choice example of the variety known as "Wood Iron Ore". 4½x3x2¼". £6.50.

43. GOLD. Witwatersrand, Transvaal, S. Africa. Extremely rich, golden, hackly mass cementing fragments of dark coloured "Banket" Quartz. The specimen weighs 3 oz. avoirdupois of which approx. 1 oz. is the Gold. 2½x1½x1¼". £80.
GOLD. Grass Valley, Sierra Nevada, California, U.S.A.
Specimen A - Very rich, bright, golden, hackly platy crystalline mass 3x1\(\frac{3}{8}\)", aggregated on one end of milky Quartz matrix. 2x1\(\frac{1}{8}\)". £17;
Specimen B - Rich, small, metallic, masses and specks aggregated in a 2x1\(\frac{3}{4}\) area in milky Quartz. 1x1\(\frac{5}{8}\)". £6.50;
Specimen C - As Specimen B - but with slightly less Gold. 1x1\(\frac{3}{8}\)". £4.50;
Specimen D - As Specimen C - 2x1\(\frac{3}{8}\)". £2.25.

HARMOTONE. Bellgrove Mine, Strontian, Argyllshire.
Specimen A - Choice, large, lustrous white, twinned crystals to 3\(\frac{1}{4}\) in size, thickly intergrown and encrusting a 2x1\(\frac{3}{8}\) area in matrix. 3x2". £4.50;
Specimen B - Choice, lustrous white, twinned crystals to 1 cm. in size, thickly intergrown and completely encrusting matrix. 1\(\frac{1}{4}\)x1\(\frac{3}{8}\)". £2.50;
Specimen C - Bright, lustrous, white twinned crystals to 8 mm. in size, thickly intergrown on matrix. 1x1". £1.25.

HELVINE. Laosundfjord, Norway.
Superb, bright, golden yellow, sharp crystals, mostly around 2 mm. in size, richly scattered on and embedded in matrix with 3 cm. patches of black Sphalerite in association. 3x1\(\frac{1}{2}\)x1\(\frac{1}{2}\)". £3.

HEMMORPHITE. La Esmeralda Mine, Durango, Mexico.
Select, silky light turquoise blue botryoidal mass thickly covering Barytes matrix. 3\(\frac{1}{4}\)x2\(\frac{3}{4}\)x1\(\frac{3}{4}\)". £11.

HEULANDITE. Poona, India.
Lustrous, translucent white, sharp terminated crystals to \(\frac{1}{3}\) in size, thickly intergrown and lining a 2x1\(\frac{3}{8}\) cavity in Basalt matrix. 3x2". £7.

LIVINGSTONEITE. Huitzuco, Guerrero, Mexico.
Pure, lustrous, metallic grey, bladed crystalline mass. 1x1\(\frac{1}{2}\)". £4.50.

LUESHITE. Luusehe, Kivu, Zaire.
Select, sharp, well formed, greyish, single crystals approx. \(\frac{1}{2}\) in size. £2.25 each.

MALACHITE. Kabwe, Katanga, Zaire.
Pure, bright green, silky botryoidal mass showing excellent banding around the edges. Well shaped attractive specimen for display. 4x3 x 1\(\frac{1}{2}\)". £11.

MALACHITE. Roughtengill Mine, Caldbeck, Cumberland.
Rich, bright green, silky radiated masses and botryoids thickly scattered on both sides of Quartzose matrix. 3x2\(\frac{3}{4}\)". £4.50.

MELANITE (variety of ANDRADITE). Bancroft, Ontario, Canada.
Large, blackish, well formed crystals to \(\frac{1}{3}\) in size, partially embedded in matrix with numerous lustrous light brownish small crystals and crystal sections of ZIRCON scattered on and in the matrix.
The Zircon fluoresces a bright yellow orange color under short wave u.v. 2\(\frac{2}{3}\)x1\(\frac{1}{2}\)". £3.50.

MELONITE (Nickel Telluride). Cresson Mine, Cripple Creek, Teller Co., Colorado, U.S.A.
Select, brassy colored metallic single bladed crystal approx. \(\frac{1}{4}\) in size. £6.50.

MICROcline. Pike's Peak, Teller Co., Colorado, U.S.A.
A large sharp, lustrous well formed creamy colored terminating single crystal implanted on Cleavelandite matrix. 2x1\(\frac{3}{4}\)x1\(\frac{3}{8}\)". £3.50.

MIMETITE variety CAMPYLITE. Drygill Mine, Caldbeck, Cumberland.
Choice, solid, heavy light orangey vein-section with large cavities lined with bright lustrous barrel shaped crystals to \(\frac{1}{3}\) in size, with minor Quartz and block Psilomelane in association. 3\(\frac{1}{4}\)x2\(\frac{3}{4}\)x1\(\frac{3}{4}\)" thick. £16.50.

MIXITE. Old Gunnislake Mine, Gunnislake, Cornwall.
Small, light green, feathery crystals scattered on Quartzose matrix with odd small crystals of Zeunerite in association. 2\(\frac{1}{4}\)x2x1\(\frac{3}{4}\)". £4.50.

<tr>
<td>58.</td>
<td>MONAZITE. Setesdal, Ireland, Norway. Lustrous, close brown crystal showing some good faces and a termination. 1 1/4x1/4&quot;.</td>
<td>£2.25.</td>
</tr>
<tr>
<td>59.</td>
<td>MOORITE. Sterling Hill Mine, Ogdensburg, New Jersey, U.S.A. Very rich, pearly, pale creamy brown platy crystals encrusting Franklinite rich matrix. 2 1/4x2 1/2&quot;.</td>
<td>£6.50.</td>
</tr>
<tr>
<td>60.</td>
<td>NATROLITE. Dean Quarry, St. Keverne, Lizard, Cornwall. Rich, radiated, lustrous white, crystalline mass associated with white well formed crystals of ANACRITE to 3/4&quot; in size and a little Calcite and Gabbro. 4x2x2&quot;.</td>
<td>£1.50.</td>
</tr>
<tr>
<td>61.</td>
<td>OLIVINE. Phoenix Mine, Linkinhorne, Cornwall. Rich, small, bright olive green crystals thickly encrusting gossany Quartz matrix. 2 1/2x2&quot;.</td>
<td>£5.</td>
</tr>
<tr>
<td>63.</td>
<td>PHOSPHATANITE. Mine Le Faye, Grury, Saone-et-Loire, France. Rich, bright yellow thick crystalline crust covering gossan matrix with odd plates of lime green Autunite in association. 2 1/4x2 1/2x2 1/4&quot;.</td>
<td>£6.50.</td>
</tr>
<tr>
<td>64.</td>
<td>POLLANITE. Platten, Bohemia, J.S.S.R. Rich, dark grey, crystalline mass with odd large crudely formed crystals to 1 cm. in size intergrown on the surface of the specimen. 3 1/4x1 1/4x1&quot;.</td>
<td>£6.50.</td>
</tr>
<tr>
<td>65.</td>
<td>POLYBASITE. Aizape, Sonora, Mexico. Choice, sharp, lustrous grey, metallic, crystals mostly around 1/4&quot; in size, forming an intergrown mass with very minor Pyrite in association. 1x1&quot;.</td>
<td>£2.25.</td>
</tr>
<tr>
<td>66.</td>
<td>PREHNITE. Byestone Qiry., Barrhead, Renfrew, Scotland. Lustrous, translucent, lime green coloured well formed crystals thickly lining a 1 1/4x1&quot; cavity in matrix. 2 1/4x2x1 1/4&quot;.</td>
<td>£1.</td>
</tr>
<tr>
<td>67.</td>
<td>PROUSTITE. Joachimstal, Bohemia, J.S.S.R. Bright red masses aggregated on massive grey native Arsenic with thin crusts and micro crystals of white Arsenolite. 2 1/4x1 1/2x1 1/4&quot;.</td>
<td>£3.50.</td>
</tr>
<tr>
<td>68.</td>
<td>PSEUDOMALKITE. Virneberg Mine, Rheinbreitbach, Germany. Choice, very rich, deep green micro crystals thickly lining cavities in brecciated Quartz. 1x1x1&quot;.</td>
<td>£3.25.</td>
</tr>
<tr>
<td>69.</td>
<td>PYRITES. Wheal Jane, Kea, Cornwall. Select, bright golden, unusual crystalline stalactitic masses mostly around 2&quot; in length and from 1 - 1&quot; wide.</td>
<td>£1.50 each.</td>
</tr>
<tr>
<td>70.</td>
<td>PYROMORPHITE. Wheatley Mine, Phoenixville, Pennsylvania. Rich, lustrous, light green sharp hexagonal crystals to 4 mm. in size, thickly intergrown and aggregated on crystalised Quartz matrix. 3 1/4x1 1/4x1&quot;.</td>
<td>£7.</td>
</tr>
<tr>
<td>71.</td>

</table>
73. **QUARTZ.** Boltsburn Mine, Rockhope, Co. Durham. Bright, large, translucent to transparent slightly milky sharp, doubly terminated crystals to 3" in size, thickly encrusting a portion of a large light purple cubic Fluorite crystal. 3½x2½x2". £7.

74. **QUARTZ.** Florence Mine, Egremont, Cumberland. Specimen A - Very bright, transparent, sharp doubly terminated crystals to 1 cm in size, thickly encrusting Hematite matrix. The reverse of the specimen is completely encrusted with bright black shining platy crystals of SPECULANITE. 2½x1½x1½". £7;
Specimen B - As Specimen A - with the Quartz curving round two side sides of the specimen and with a little Speculananite in association. 1½x1½x1½". £3.50.

75. **RHODOCHROSITE.** Kapnik, Rumania. Light pink, rosettes of small lustrous crystals thickly aggregated and scattered on elongated terminated milky Quartz crystals, all covering matrix. 5x2½". £1.3.

76. **RUTILE.** Itabira, Minas Gerais, Brazil. Rich, golden, elongated needly crystals associated with much platy bright black crystalised Hematite and a little Quartz. 2½x1½x1". £4.50.

77. **SCHORDITE.** Cloga Mine, Perranzabuloe, Cornwall. Specimen A - Sparkling, pale green micro crystals richly encrusting both sides of a mass of bladed black WOLFRAMITE with minor Quartz in association. 2½x1½x1". £4.50; Specimen B - Thin crusts of pale green micro crystalised Schordite covering both sides of bladed black Wolframite. 2½x1½". £2.25; Specimen C - A rich, light green, sparkling crystalised area of Schordite ½" in size, on massive black Wolframite with other small patches of micro crystals. 2x1½x1". £2.25.

79. **NATIVE SILVER.** Kearsage Mine, Keweenaw Pen., Michigan. Pure, bright silverly, metallic hekkly crystalised mass. 1¼x1½x½". £1.3.

80. **SILVITE.** Wheal Herland, Gwinear, Cornwall. Very rich, pure, slightly tarnished greyish metallic mass with odd specks of Galena and reddened Quartz. 2x2½". £3.25.

81. **SODDITE.** Chinkalèbwe, Katanga, Zaire. Select, sharp, lustrous, mustard yellow crystals mostly around 1 - 2 mm. in size, richly aggregated in areas on Uraniferous Quartz. 3x1½". £1.4.

82. **SPHALERITE.** Boltsburn Mine, Rockhope, Co. Durham. A very attractive mass of sparkling white hacket Quartz with bright black sharp Sphalerite crystals to ½" in size richly scattered on and encrusting it. The reverse of the specimen is completely encrusted with intergrown deep brown Sphalerite crystals. 7x3x2½". £11.

83. **SPHALERITE.** Force Crag Mine, Nr. Keswick, Cumberland.
Specimen A - Choice, bright black, large well formed crystals to ½" in size, thickly intergrown and encrusting Slate matrix with a little light brown Siderite and sparkling white Quartz in association. 3½x3½". £7.75; Specimen B - Bright black large crystals to ½" in size, thickly intergrown on Slate matrix with very minor Siderite in association. 2½x2x1½". £4.50.

84. **STIBNITE.** Wheal Boys, St. Endellion, Cornwall. Pure, rich, lustrous silvery grey bladed mass associated with minor milky Quartz. 3x2½x1½". £4.50.
85. STIBRITE. Berufjord, Iceland. Choice, lustrous, creamy coloured large, sharp crystal sheaves to 1" in size, thickly intergrown and encrusting matrix. Very select specimen from this classic old location. 3x3x1½". £11.

86. STOLZITE. Zinnwald, Bohemia, Czechoslovakia. Small, sharp, creamy coloured crystals scattered and aggregated on milky Quartz with odd plates of Muscovite mica. 2x1x1/4". £8.

87. NATIVE SULPHUR. Girgenti, Sicily, Italy. Fine, bright yellow, large, well formed crystals to 3/8" in size, richly intergrown on a matrix of cellular small crystals of spiky Sphalerite. 3½x3x2". £11.

88. TEMNALITE. El Cobre, Concepcion del Oro, Zacatecas, Mexico. Bright grey, large, sharp, crystals to 1/2" in size, scattered on both sides of crystallised milky Quartz. 2½x1½x1/2". £7.

89. TETRAHEDRITE. Crinnis Mine, Nr. St. Austell, Cornwall. Choice, rich, metallic grey mass intergrown with golden Chalcopyrite and with a large 1" metallic grey crystal associated with smaller crystals and a little Quartz on one face of the specimen. 2½x2x1½". £9.

90. TETRAHEDRITE. Herodsfoot Mine, Llanwerrit, Cornwall. Choice, well formed crystals to 1" in size coated with Chalcopyrite intergrown and scattered on cellular Quartz with much light grey small Ulbanite crystals in association. 2½x2x1½". £7.

91. TOPAZ. Pien de Rons, Montmore Mines, Co. Down, N. Ireland. Specimen A - A sharp, transparent, well terminated crystal 1/4" in size implanted in a 1/2" cavity with creamy white crystals of Orthoclase and Spiky Quartz in Granite. 2x1½x1½". £4.50; Specimen B - As Specimen A - but with the Topaz crystal being approx. 1½ cm. in size, 2x1¼x1¼". £2.25.

92. TOPAZ. Cloga Head, Pencilzabulae, Cornwall. Specimen A - A select pale blue sharp, translucent, well terminated crystal 5 cm. in size, implanted in a cavity in crystalline creamy Topaz with grains in association. 1¾x1x3/4". £2.25; Specimen B - rich, creamy granular crystalline mass with odd glassy embedded terminated crystals. 1x1". £1.25.

93. TOURMALINE variety SCHORL. Trebell Mine, Nr. Lanivet, Cornwall. Choice, bright black, elongated columnar crystals to 1½" in length thickly intergrown with Quartz. Very attractive specimen. 3½x2x1½". £1.50.

94. TOURMALINE variety RUBELLITE. Pala, San Diego Co., California. Fine, bright pink, divergent sprays of elongated columnar crystals to over 1" in length thickly embedded and scattered in a matrix of pale lavender coloured crystalline Lepidolite. 3½x3x1½". £7.50.

95. TREMOLITE. Alta Valley, Piedmont, Italy. Lustrous, alive green, bladed crystals to 1/4" in length thickly intergrown with Sphalerite and a little Chalcopyrite. 2¼x1¼x1/4". £3.25.

96. VANADINITE. Wanlockhead, Dumfries, Scotland. Small, pale orangey globules scattered on a pale grey tubose mass of PUHBOGUMITE with minor Limonite in association. 2½x1½x1½". £3.50.

98. VIVIANITE. Blackbird Mine, Lemhi Co., Idaho. Lustrous, deep blackish blue thick bladed crystals richly intergrown on Chalcopyrite/Pyrite veinstuff. 2x1¼x1¼". £4.50.
Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

NOVEMBER 1975

1. ANAPAITE. Bellaver de Corden, Gerona, Spain. Bright sparkling small, very sharp, transparent olive green crystals thickly lining a 1½x1½" cavity in Mudstone matrix. 3½x2½x1¼". £7.

2. ANATASE. Tyrse, Norway. Very sharp, lustrous, bluish black crystals to 5 mm. in size, scattered on sides of a group of intergrown clear well terminated Quartz crystals to 1" in length - intergrown and protruding from massive Quartz. These crystals are unusually large for Anatase. 2x2x1¼". £17.

3. APATITE variety FRANCOLITE. Fowey Consols Mine, Tywardreath, Cornwall. Specimen A - Lustrous, creamy transparent hexagonal crystals, mostly around 3 mm. in size, thickly intergrown and covering a 3x1½" area on Quartz/Slate veinstuff. 4½x2½x1½". £7.75; Specimen B - Bright, translucent colourless crystals thickly intergrown and aggregated in clusters, lining large cavities in Quartz veinstuff with minor light brown Siderite crystals in association. 2½x2x1½". £4.50; Specimen C - Sharp, translucent colourless crystals to 3 mm. in size, thickly lining a 1x1½" cavity in Quartz. 1½x1½x1½". £2.50.

4. APOLHYLLITE. Jewel Tunnel, Poona, India. A portion of a large transparent to translucent lustrous, pale lime green coloured crystal, showing some good faces, and approx. 2" on edge associated and intergrown with sheaves of radiated creamy pink STILBITE. 2½x2x1¼". £5.50.

5. ARSENOPYRITE. Parral, Chihuahua, Mexico. Specimen A - Large, bright, sharp silvery crystals, some being doubly terminated, to ½" in size forming an intergrown crystal mass with odd small Quartz crystals in association. 2x2x1¼". £8.50; Specimen B - Very large bright silvery crystals to 3/4" in size, thickly intergrown on massive Arsenopyrite. 2½x2x1¼". £5.50; Specimen C - Bright silvery, very sharp, elongated crystals mostly around 5 mm. in length, thickly intergrown on massive Arsenopyrite. 2½x1½x1½". £4.50.
   Specimen A - Bright, sparkling, small sharp emerald green crystals thickly lining cavities in green matrix. 2½x1½x1⅛. £3.25; Specimen B - As Specimen A - with the crystals encrusting matrix. 2¼x1½. £2.25; Specimen C - Small, bright, sharp emerald green crystals thickly lining a 1⅜x1⅛ cavity in matrix with minor Quartz in association. 2x1⅛x1⅛. £2.

7. **AXINITE.** Botallack Head, St. Just, Cornwall. Specimen A - Choice, lustrous, clove brown sharp well formed crystals to 8 mm. in size, thickly intergrown on massive Axinite matrix. 3½x2⅛. £9; Specimen B - Very bright translucent sharp clove brown crystals to 5 mm. in size, thickly lining a 1⅝x1⅛ cavity in massive Axinite with odd smaller cavities also lined with crystals. 3½x2⅛. £8; Specimen C - Choice, lustrous, sharp clove brown crystals to 7 mm. in size, thickly intergrown and covering massive Axinite. 1⅜x1⅛. £5.50.

8. **AZURITE.** Bisbee, Cochise Co., Arizona, U.S.A. Bright blue aggregates of well formed crystals to 5 mm. in size, thickly intergrown on cellular Limonitic matrix and associated with small botryoidal masses of Malachite, some showing octahedral form replacing small cuprite crystals. 1½x1⅝. £5.

9. **BARYTES.** Ladywash Mine, Eyam, Derbyshire. Lustrous, creamy white bladed 'cocks-comb' crystals to 1" in size, forming an attractive intergrown mass with a faint dusting of drusy brassy Marcasite crystals. 2¼x2⅛. £1.75.

10. **BARYTICALCITE.** Blaggill Mine, Nr. Alston, Cumberland. Choice, creamy coloured, sharp elongated terminated crystals to 1 cm. in length, thickly lining a 2¼x1⅜ cavity in massive Barytocalcite. The cavity extends around one side of the specimen and is also lined with crystals on a 2¼x1⅛ area on the reverse. 4x3. £9.75.

11. **BERTRANDITE.** Cheesewring Qry. Linkinhorne, Cornwall. Small, lustrous, translucent colourless platy crystals to 4 mm. in size, scattered amongst small Quartz crystals on a 1x1" area on Pegmatitic Granite. 2⅔x1⅜x1⅜. £4.50.

12. **BEOUDANTITE.** Wheal Carpenter, Gwinear, Cornwall. Rich crust of sparkling dark olive green micro crystals on Gossany Quartz. 2¼x1⅛. £2.75.

13. **NATIVE BISMUTH.** Cobalt, Ontario, Canada. Pure, bright, silvery metallic crystalline cleavage mass with very minor Calcite attached. 1⅜x1⅝x3⅜. £3.

14. **CALCITE.** Stann Mine, Ulverston, N. Lancs. Lustrous, transparent to translucent milky coloured well formed terminated crystals, mostly around 1 cm. in length, with a few slightly larger, thickly intergrown and completely encrusting Limonite matrix. 4x2½. £4.50.

15. **CARMINE.** Mina San Felix, Caborca, Sonora, Mexico. Dark, carmine red crystalline masses and veinlets intergrown with Quartz and minor light yellowish earthy Boudantite. There are numerous small cavities lined with micro carmine crystals. Very rich example of this rare mineral. 2x1½x1½. £5.50.

16. **CASSITERITE.** North Pig Lode, 700' level, Geevor Mine, Pendeen, Cornwall. Very rich, light brown cellular mass with numerous cavities lined with sparkling micro crystals. The specimen was collected in 1931 from one of the richest lodes in the mine. 3x2x2. £3.50.
17. CHERAGYRITE. variety EMMONITE. Broken Hill, N.S. Wales, Australia. Pure, light olive green, cellular waxy crystallised mass. Specimen A - With minor Garnet in association. 1 1/4 x 1 1/2". £7; Specimen B - 3/4 x 3/4". £2.75.

18. CHERSJSTE. Mibladen, Mr. Midelt, Atlas Mts., Morocco. An unusual translucent creamy coloured well formed, doubly terminated, crystal 1 x 1" in size, implanted on the end of a matrix of intergrown platy pink Barytes crystals with odd small masses of Galena in association. 2 1/2 x 1 1/2". £5.50.

19. CHERSJSTE. Dundas, Tasmania, Australia. Lustrous, translucent, whitish bladed crystals to 1/4" in length, thickly intergrown on Limonite. 2 x 1 1/2". £3.25.

20. CHALCLOCITE. Cooks Kitchen Mine, Camborne, Cornwall. Dark grey, platy hexagonal crystals to 1/4" in size, intergrown and scattered on cellular Quartz/ Hematite veinstuff. 2 1/2 x 2 1/2". £7.

21. CHALCLOCITE. Wethered Lodge, Geevor Mine, Pendeen, Cornwall. Small, sharp, metallic grey crystals to 3 mm. in size, intergrown and scattered on tarnished Chalcopyrite/Quartz veinstuff. 2 x 2". £6.

22. CHALCOPHYRITE. Treece, Cherokee Co., Kansas, U.S.A. Bright, golden, sharp sphenoidal crystals, mostly around 4 mm. in size, and some having an attractive iridescent tarnish, thickly scattered over creamy pink saddle shaped crystals of Dolomite covering sheet matrix. 4 1/2 x 3 x 2". £11.

23. CHALCOPHYRITE. Fowey Consols Mine, Tywardreath, Cornwall. Bright golden metallic twinned crystals to 1 cm. in size, intergrown with slender Quartz crystals on a 1 1/2 x 1" area on Quartz/Chlorite veinstuff with minor lenticular Siderite in association. 2 x 2". £4.50.

24. CHALCOPHYRITE. Gt. Orms Head Mine, Carnarvonshire, N. Wales. Golden metallic twinned crystals to 4 mm. in size scattered on creamy coloured Dolomite crystals lining cavities in massive Dolomite matrix. Specimens from this old occurrence are now rare. 3 x 2 x 2". £4.50.

25. CLINOCLASE. Wheal Gorland, St. Day, Cornwall. Specimen A - Very bright, lustrous, deep blue crystals and 'accorns' ranging in size to 5 mm. thickly encrusting a 1 x 1" area on cellular Quartz matrix with a 3/4" cavity and other smaller cavities lined with bright, small, sharp OLIVENITE crystals. 2 1/2 x 2 1/2". £11; Specimen B - Very bright, deep blue, crystals and crystal aggregates mostly around 3 mm. in size, thickly lining a 1/2" cavity in cellular Quartz with odd smaller cavities lined with small Olivenite and Clinoclase crystals. 2 x 1 1/4 x 1 1/4". £6.50; Specimen C - Two 1 cm. sized cavities in cellular Quartz thickly lined with bright deep blue crystals ranging in size to 3 mm. There are odd traces of Olivenite in places. 1 1/4 x 1 1/4". £4.50.

26. COBALTITE. Hakansbo, Vastmanland, Sweden. A sharp lustrous tin-white crystal 4 mm in size partially embedded in massive brassy Pyrrhotite. 1 1/2 x 1 x 1". £2.25.

27. NATIVE COPPER. Unity Lodge, Levant Mine, Pendeen, Cornwall. Tarnished metallic copper coloured sheet covering altered Slate matrix. 2 1/2 x 1 1/2 x 1/2". £1.75.

28. CORNETITE. Mine de l'Etoile, Lubumbashi, Katanga, Zaire. Choice, rich, light blue flattened crystals and crystal masses to 1" in size, scattered over two sides of matrix. Rich example of this rare copper mineral. 4 x 2 x 1 1/2". £14.
29. CUPRITE. Wheal Gorland, St. Day, Cornwall. Choice, very rich, mass of lustrous deep maroon coloured sharp octahedral crystals to 4 mm. in size, associated with much metallic bright crystallised and crystalline NATIVE COPPER, and odd small fragments of vein Quartz. The specimen was collected in the early part of last century. 4x2½x2". £18.

30. CUPRITE. Copper Queen Mine, Bisbee, Cochise Co., Arizona, U.S.A. Pure rich deep red mass, with minor green Chryscolla and black Tenorite in association. 2½x1½". £1.50.

31. DOLOMITE. Trece, Kansas, U.S.A. Lustrous, bright pink, curved saddle shaped crystals thickly intergrown and encrusting matrix. 2½x2". £3.25.

32. ERYTHRITE. Saalfeld, Thuringia, Germany. Rich, deep pink, crusts and small areas of bright needly crystals on Barytes rich matrix. 2½x1⅝x1¼". £4.50.

33. FLUORITE. Heights Mine, Weardale, Co. Durham. Fine, transparent emerald green colour red formed cubic crystals, to ½" in face edge, thickly intergrown and encrusting a light coloured matrix. 4x2½x1½". £28.

34. FLUORITE. South Weal Tanar, Bere Alston, Devon. Sharp, pale creamy green OCTAHEDRAL CRYSTALS to 1 cm. in size thickly intergrown and encrusting Chalcedonic Quartz. 4x2½x1½". £6.50.

35. FLUORITE. Hilton Mine, Scordale, Westmoreland. Bright, transparent, yellow sharp cubic crystals to ½" on face edge thickly intergrown and encrusting matrix. 3x2¼". £7.

36. FLUORITE. Bilsburn Mine, Roskope, Co. Durham. A large translucent to transparent, light purple inter-penetrant twinned cubic crystal, the larger being 3x2½x2½" in size, the smaller being 1⅛x1⅝x1½" in size, with bright doubly terminated crystals of milky Quartz to 1 cm. in size, and a little brown Siderite encrusting two faces of the larger crystal. £11.

37. FRANKLINITE. Franklin, Sussex Co., New Jersey, U.S.A. Specimen A - Pure black lustrous mass, with one good crystal face and minor Calcite in association. 2x1⅝x1½". £2.25; Specimen B - Well formed, lustrous black, single octahedral crystals, each showing several good faces but none being absolutely complete. Varying in size from ⅛x⅝x⅝" - 1x⅝x1½", £2.25 - £4.50 each.

38. GALENA. Mid-Continent Mine, Trece, Kansas, U.S.A. Bright, metallic grey, sharp cubic crystals to 1 cm. on face edge, scattered over both sides of an intergrown mass of light reddish brown, Sphalerite crystals, showing much parallel growth, to 1" in size. There are numerous bright golden small sharp Chalcopyrite crystals encrusting the faces of some of the Sphalerite crystals. 3x2". £7.

39. GALENA. Greenside Mine, Glenridding, Westmoreland. Lustrous metallic grey modified cube-octahedral crystals to 1 cm. in size, forming a pure intergrown mass with a 1" area of platy Calcite crystals in association. 2½x1⅝x1½". £4.50.

40. GALENA. Eyan, Derbyshire. Sharp, lead grey, octahedral crystals to ½" on face edge, forming a pure intergrown mass with very minor small transparent cubes of Fluorite and elongated translucent creamy coloured small crystals of Calcite scattered on one side of the specimen. 3x1⅝". £8.
41. GEOCRONITE. Sola, Orebro, Sweden. Very rich, metallic silvery grey mass associated with minor Calcite matrix. 2½x1¼x1½". £6.50.

42. GOETHITE variety "Wood Iron Ore". Restormel Royal Iron Mine, Lostwithiel, Cornwall. Choice, pure, light brown radiated banded mass with different bands showing varying shades of colour. 2½x2½x2". £5.50.

43. GOETHITE. Wheal Castle, St. Just, Cornwall. Radiated, deep brown banded mass, with a bright shining blackish botryoidal surface, thickly lining large cavities in cellular Quartz. 1½x1½x1¼". £2.25.

44. HAUSMANNITE. Wynchan Mine, Egremont, Cumberland. Small, lustrous black crystals thickly intergrown on cellular massive Hausmannite. 2x1½". £4.50.

45. HEMATITE. Parknoweth Mine, Nr. St. Just, Cornwall. Lustrous, deep blackish red thick radiated botryoidal mass covering Quartz veinstuff. 3½x2x1½". £2.75.

46. HEMATITE. Rio Marina, Isle of Elba, Italy. Very choice, bright black, sharp well formed crystals to ¾" in size, and with a faint attractive iridescent tarnish, thickly intergrown and covering massive Hematite matrix. 5x3½". £17.

47. HEMIMORPHITE. Mina Ojuela, Mapimi, Durango, Mexico. Fine, lustrous creamy white, large sharp terminated crystals to ¾" in length, thickly intergrown and free standing on cellular Limonite matrix. 3½x2". £9.

48. HEMIMORPHITE. La Esmeralda Mine, Durango, Mexico. Specimen A - Select, silky turquoise blue coloured thick botryoidal mass covering Barytes matrix. 3½x2x2". £8; Specimen B - As Specimen A - but with the colour being a slightly paler blue. 3½x2". £6.50. Very attractive and colourful specimens.

49. HYDROCERUSSITE. Mendip Hills, Somerset. Rich, pearly white translucent bladed crystal mass 1" in size, partially embedded in greyish Pyrolusite matrix, with another ¾" sized bladed Hydrocerussite crystal mass on the reverse of the specimen. 3¼x2½x1¼". £3.

50. IDOCRASE (Vesuvianite). Ala Valley, Piedmont, Italy. Specimen A - Very bright sharp terminated dark olive brown crystals to 5 mm. in size, thickly intergrown and covering matrix. 1x1". £6.50; Specimen B - As Specimen A - but with the crystals ranging up to 7 mm. in size. 1x2½". £6.50.

51. IODRITE. Broken Hill, N.S. Wales, Australia. Specimen A - Choice rich, pale yellowish crystals and crystal masses to 4 mm. in size, richly aggregated and scattered on Limonitic gossan, with blackish Psilomelane and odd small crystalline masses of Azurite in association. 3x2½". £14; Specimen B - Small, lustrous yellowish crystal masses scattered on Limonitic gossan. 1½x1¼x1½". £3.50.

52. LIBETHENITE. Phoenix Mine, Linkinhorne, Cornwall. Lustrous, deep olive green well formed crystals to 3 mm. in size, richly scattered on and in cavities in cellular Quartz with minor reddish Hematite. 1½x1¼x1½". £3.50.

53. LISKEARDITE. Marke Valley Mine, Linkinhorne, Cornwall. Snow-white, thick, crystalline crust covering Quartz/Chalcopyrite veinstuff. Rich specimen from the type location for this mineral. 1¼x1¼x1½". £2.25.
54. MAGNETITE. Traversella, Piedmont, Italy. Choice, lustrous black, sharp modified crystals to 1 cm. in size, richly intergrown on massive Magnetite matrix. £3.25.

55. MARCASITE. Tincroft Mine, Illogan, Cornwall. Specimen A – Bright, metallic, sharp twinned bladed golden crystals to 5 mm. in size, thickly intergrown and covering massive Marcasite. £5; Specimen B – As Specimen A – with the crystals encrusting Quartz. £2.25.

56. META-CINNABAR. New Almaden, Santa Clara Co., California, U.S.A. Fine, lustrous black, well formed crystals to 3 mm. in size, intergrown and encrusting a Quartzose matrix. The crystals are unusually large for this mineral. £1.50.

57. META-ZEJNARITE. Wheal Edward, St. Just, Cornwall. Lustrous, small, light green platy crystals thickly encrusting slightly iron-stained pyramidal Quartz crystals. £1.50.

58. Mimetite. Variety CARMYLITE. Drygill Mine, Caldbeck, Cumberland. Specimen A – Select, unusual, bright yellowish orange barrel shaped crystals to 8 mm. in size, showing overgrowths of small hexagonal Mimetite crystals, richly intergrown and lining a 2x1½" cavity in Quartz veinstuff. £3.50; Specimen B – Lustrous, light orangey, sharp barrel shaped crystals to 4 mm. in size, thickly intergrown and encrusting Quartz. £2.25; Specimen C – Lustrous, light orangey, barrel shaped crystals forming a pure intergrown mass and partially overlain with a thin yellowish crust of crystalline Mimetite. £2.25.

59. Mimetite. Tsumeb, Otavi, S.W. Africa. Lustrous, translucent, light yellowish sharp elongated spiky crystals to 4 mm. in length richly intergrown and scattered over both sides of matrix. £3.25.

60. OMPHACITE. Quincinetto, Piedmont, Italy. Bright, dark greenish, sharp, terminated crystals to 5 mm. in size, thickly intergrown in a 1½x½" cavity in matrix, with odd lustrous, well formed creamy brown Titanite crystals in association. £2.50.

61. OLIVENITE. Wheal Gorland, St. Day, Cornwall. Rich, sparkling, small, very sharp, olive green crystals thickly lining cavities in cellular Quartz gossan matrix. Specimen A – 4x2½x2½". £5.50; Specimen B – 3x2". £3.50; Specimen C – 1½x1½x1½". £2.25.

62. OLIVENITE. Wheal Unity, Gwennap, Cornwall. Choice, light olive green radiated needly crystals, resembling velvet in appearance, thickly lining a ½" cavity in Quartz gossan. £3.25.

63. PHARMAOSIDERITE. Wheal Gorland, St. Day, Cornwall. Bright, light green small sharp, cubic crystals richly lining cavities in Quartzose gossan. Specimen A – 2x1½x1½". £3.25; Specimen B – 1½x1½x1½". £2.50.

64. PHOSPHURANYLITE. Wheal Edward, St. Just, Cornwall. Rich, light yellowy crusts covering two sides of altered Slate matrix. 2½x1½x1½". £3.25.

65. PREHNITE. Le Bourg d'Oisans, Isere, France. Choice, lustrous, translucent lime green coloured rounded crystals to ½" in size, richly intergrown and scattered on gneiss matrix with minor Adularia in association. Five specimen from this classic old location. 3x2". £13.
66. **PYRITES.** Rio Marina, Isle of Elba, Italy. Very bright, golden metallic sharp pyritohedral crystals ranging in size to \(\frac{1}{3}\)" in diameter, attractively scattered and intergrown on lustrous black Hematite matrix. Choice specimen for display. 4\(\frac{1}{2}\)x3x2\(\frac{1}{2}\)". £16.50.

67. **PYRITES.** South Penstruthal Mine, Nr. Redruth, Cornwall. Bright, golden, well formed pyritohedral crystals to 1 cm. in size, intergrown with small elongated terminated crystals of Quartz on Chlorite matrix. 2\(\frac{1}{4}\)x1\(\frac{1}{2}\)x1\(\frac{1}{4}\)". £1.75.

68. **PYROMORPHITE.** South Mine, Broken Hill, N.S. Wales, Australia. Lustrous light yellowish green elongated hexagonal crystals mostly to 3 mm. in length, richly scattered over brownish Limonite on gossan matrix. 3\(\frac{1}{2}\)x2". £4.50.

69. **PYROMORPHITE.** Kapi Mine, Dundas, Tasmania, Australia. Small, sparkling, dark green crystals encrusting Limonite matrix, with odd small crystals of orange Crocoite in association. Good material for micro study. Specimen A - 2x1\(\frac{1}{2}\)". £2.25; Specimen B - 1\(\frac{1}{4}\)x1\(\frac{1}{4}\)". £1.75; Specimen C - With slightly more Crocoite in association. 1x1". £1.25.

70. **PYROXENE.** Renfrew Co., Ontario, Canada. Lustrous, dark greenish well formed terminated crystals to \(\frac{3}{4}\)" in size, richly intergrown on massive Pyroxene/Quartz. 2\(\frac{1}{2}\)x1\(\frac{1}{2}\)x1\(\frac{1}{4}\)". £4.50.

71. **QUARTZ.** Ale & Cakes Mine, Qwennap, Cornwall. A large, sharp, transluscent milky coloured well formed prismatic crystal. 2\(\frac{1}{2}\)x2" across the axis x 2\(\frac{3}{4}\)" long. £4.50.

72. **REALGAR.** Kapnik, Rumelia. Choice, bright red, sharp well formed crystals to 7 mm. in size, thickly intergrown and lining large cavities in Quartz/greyish Native Arsenic matrix. Fine old time specimen, collected during the early part of last century. 4x2\(\frac{1}{2}\)x1\(\frac{1}{2}\)". £22.

73. **SCHEELITE.** Wheal Cock, St. Just, Cornwall. Very rich waxy creamy coloured octahedral crystal sections to 5 mm. in size, thickly intergrown and embedded in greenstone matrix. Bright blue fluorescence under short wave u.v. Specimen A - 3x2". £3.50; Specimen B - 2x1\(\frac{1}{2}\)". £3.25.

74. **SCHEELITE.** Carrock Mine, Saltbeck, Cumberland. Specimen A - Select, very rich, waxy creamy brown mass associated with a little milky Quartz and Feldspar. Superb blue fluorescence under short wave u.v. 3\(\frac{1}{2}\)x2x1\(\frac{1}{2}\)". £2.75; Specimen B - Rich waxy creamy brown masses intergrown with blackish Wolframite, silvery Arsenopyrite and a little Quartz. Superb blue fluorescence under shortwave u.v. 2\(\frac{1}{2}\)x1\(\frac{1}{4}\)". £1.25.

75. **SCHOLZITE.** Reapook Hill, Flinders Range, S. Australia. Fine, creamy coloured transparent elongated, terminated, needly bladed crystals to 8 mm. in length, radiated in sprays and thickly encrusting large areas on two sides of Limonitic matrix. 2\(\frac{1}{2}\)x1\(\frac{1}{4}\)". £11.

76. **NATIVE SILVER.** Kongsberg, Norway. Very fine, rich, silvery metallic solid dendritic crystalised mass intergrown with a little Calcite. The surfaces of the specimen show numerous slightly tarnished, small, "fir trees" of crystallised silver. Weight of the specimen approx. 8 oz. avoirdupois. 1\(\frac{1}{2}\)x1\(\frac{1}{4}\)x1\(\frac{1}{4}\)". £33.

77. **NATIVE SILVER.** Wolverine Mine, Keweenaw Pen., Michigan, U.S.A. Pure, solid, bright silvery nuggety metallic mass. 1x2". £4.50.
78. NATIVE SILVER. Guanajuato, Mexico. Select, slightly tarnished, small curly wires protruding from Pyrite/Quartz veinstuff. Choice, thumb-nail sized specimen. £4.50.

79. SKUTTERUDITE. Bou Azzer, Anti-Atlas, Morocco. Fine, very bright, silvery sharp crystals to 3 mm. in size, thickly intergrown on massive Skutterudite. 2½x1¾x1½". £11.

80. SMITHSONITE. Proprietary Mine, Broken Hill, N.S. Wales, Australia. Lustrous, creamy white translucent rounded crystal aggregates to 5 mm. in size, intergrown in clusters and scattered in large cavities in a stalactitic cellular mass of botryoidal black Psilomelane. 3x3x2½". £9.

81. SPHENE. Capelinha, Minas Gerais, Brazil. Choice, lustrous, transparent to translucent very sharp, fine, very bright, silvery shr crystals to ⅓" in size, attractively scattered over granular Epidote matrix with a ⅛" sized, sharp creamy crystal of Albite in association. 3x2½". £16.50.

82. SPHALERITE. Boltburn Mine, Rookhope, Co. Durham. Bright, black well formed crystals mostly around ¼" in size, thickly encrusting both sides of matrix and associated with odd small pale purplish cubes of Fluorite and bright, metallic, crystals of Galena to ⅛" in size, 3x3x1½". £7.

83. SPHALERITE. Wheal Jane, Kea, Cornwall. Large, lustrous black, sharp crystals to ¾" on face edge forming a pure intergrown group which is slightly dusted in places with micro brassy Pyrite crystals. 3x1½". £3.25.

84. STANNITE. East Pool Mine, Illogan, Cornwall. Pure, metallic, tarnished mass associated with a little golden, slightly iridescent Chalcopyrite and odd small fragments of Quartz. 3x1½x1¼". £2.50.

85. STAUROLITE. Morbihan, Brittany, France. Dark brown well formed sharp 60° interpenetrant twinned single crystals ranging in size from ⅛" to 1" long. £1.25 each.

86. NATIVE SULPHUR. Agrigento, Sicily, Italy. Specimen A - Superb translucent bright yellow very large, sharp, doubly terminated crystals to 1½" in size, thickly intergrown on a fragment of drusy crystalised creamy white Aragonite. There are three very large crystals on the specimen and numerous others which are approx. ⅛" in size. Overall dimensions 3½x2½x1½". £16.50; Specimen B - Select, translucent, bright yellow sharp crystals forming an intergrown group. Crystal faces approx. 1" in size. Overall size 1½x1½x1½". £4.50; Specimen C - Choice, transparent, very sharp, well formed single crystals. Each approx. 1x½x½". £2.25 each.

87. TARBUITITE. Broken Hill, Zambia. Specimen A - Select, sparkling pale creamy green plate composed of numerous small, sharp, intergrown crystals with no matrix attached. 3x2½". £9.75; Specimen B - Fine bright pale creamy green small sharp crystals thickly intergrown and encrusting dark cellular Limonite. 1x1¼". £6.50. These specimens were collected from the original spencet workings in the 1920s.

88. TETRAHEDRITE. Clitters Mine, Gunnislake, Cornwall. Very bright, metallic grey mass with ⅛ crystal faces, intergrown with a little brownish Siderite. 2½x2". £2.25.

89. TETRAHEDRITE variety FREIBERGITE. Cerro de Pasco, Peru. Choice, bright, silvery grey very sharp crystals, the largest being over 1 cm. in size, thickly intergrown in massive Tetrahedrite with odd small specks of golden Pyrites. 1½x1½". £11.
91. TOURMALINE variety DRACITE. Yinnietharra, W. Australia. Superb, very large, lustrous brown sharp doubly terminated crystal 3½x3x2" in size, with two other smaller doubly terminated crystals 2½x1¼x1¼" and 1¼x1½x1½", attached. Overall size of the specimen. 4x3¼x2½". Choice for cabinet display, £22.

92. VANADINITE. Mibladen, Mr. Midelt, Atlas Mts., Morocco. Specimen A - Fine, lustrous, deep red very sharp elongated hexagonal crystals, mostly around 4 - 5 mm. in size, thickly intergrown and freestanding on a light coloured matrix. 3½x2¼". £23; Specimen B - Very bright, translucent, light orangey sharp hexagonal crystals to 5 mm. in size, thickly intergrown on their edges and scattered over matrix. 3½x1½x1½". £4½.

93. VIVIANITE. Caleraine, Victoria, Australia. A select cluster of translucent lustrous inky-blue sharp well terminated bladed crystals, the largest being approx. 1" in size, 1½x1½x1½". £4.50.

94. WAVEZLITE. Highdown Qr., Filleigh, Devon. Lustrous, creamy radiated crystal aggregates to 1 cm in diameter scattered on both sides of dark Slate matrix. 2x2x1½". £2.50.

95. WILLMITE. Franklin, Sussex Co., New Jersey, U.S.A. Choice, well formed waxy yellowish brown terminated crystals to ⅛" in size, intergrown and partially embedded in creamy Sillenite. 2x1½x1½". £1½.

96. WITHERITE. South Moor Colliery, Lanchester, Co. Durham. Lustrous, translucent, creamy white sharp flat hexagonal crystals to ⅛" in size, stacked one upon another and lining cavities in massive Witherite. 2½x2½x1½". £6.50.

97. WOLFRAMITE. Panasqueira, Beira-Beixa, Portugal. Choice, black, well terminated sharp striated single crystal showing much parallel growth and partially encrusted with small creamy brown lenticular crystals of Sillenite on one face of the crystal. 2" long x 1" across the axis. £1½.

98. WOLFRAMITE. Carrock Mine, Caldbeck, Cumberland. Select, bright black pure bladed crystal mass associated with minor milky Quartz and traces of creamy coloured Sillenite. 3½x2⅛x1½". £4.50.

99. WULFENITE. Helena Mine, Schartzenbach, Carinthia, Austria. Sharp, lustrous, orangey yellow well formed tabular crystals, to ¼" in size, intergrown and scattered over Dolomite matrix with small creamy coloured spiky crystals of Calcite in association. 2½x2⅛". £9.

100. WULFENITE. Old Yuma Mine, Mr. Tucson, Arizona, U.S.A. Transparent, pale yellowish Calcite well formed tabular crystals to ¼" in size, scattered on a cellular matrix with minor blackish Psilomelane. 2x1½". £4.50.
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

DECEMBER 1975

1. ADAMITE. Mina Ojuela, Mapimi, Durango, Mexico. Fine, lustrous, creamy yellow well formed terminated crystals aggregated in radial fans mostly around 8 mm. in size, completely encrusting cellular Limonite. A very choice undamaged small specimen. 2"x1"x1". £6.50.

2. ANALCIME. Quirang, Isle of Skye, Scotland. Lustrous, translucent, milky coloured sharp crystals ranging in size up to 4" intergrown with modified crystals of Calcite, all thickly encrusting matrix. 2½x1½x1½". £3.25.

3. ANALCIME. Croft Quarry, Leicestershire. Small sharp creamy coloured crystals, some having a slight pinkish hue, to 1 cm. in size, and associated with very minor Calcite, thickly encrusting matrix. 3x2½x½". £3.50.

4. ARAGONITE. Ait-Labbes, Atlas Mts., Morocco. Choice, ramifying, tubose crystalised mass of the "flos-ferri" variety, of a lustrous creamy white colour associated with platy, translucent, crystals of Calcite mostly around 1 cm. in size. Attractive specimen for display. 3x2½x2½". £6.50.

5. ARAGONITE. Dartmoor Forest, Devon. Specimen A - Fine, translucent to transparent, spray of very sharp terminated, elongated, spear shaped crystals, with another crystal attached at right angles to the main spray. 2½"longx1½x½" overall dimensions. £14;
Specimen B - Choice, lustrous, creamy coloured translucent to transparent, elongated crystals to 2½" in length, intergrown and associated with minor Limonite matrix. 2½x2½x1". £13;
Specimen C - A radiated group of crystals of similar form - the longest being 1½" in length with very minor Limonite attached, 2½x1½x½". £8; Specimen D - Transparent sharp terminataed crystals to 1½" in length, aggregated as a 1½" spray on Limonite/Dolomite matrix. 2½x1½x½". £4.50; Specimen E - Loose single spray of crystals 1½" in length. 80p. These specimens are from a new find and very much resemble the old classic Aragonites from West Cumberland.

6. ARDENNITE. Salm-Chateau, Ardennes, Belgium. Very rich golden brown columnar crystalline mass associated with minor Quartz. 2x1½x1½". £6.50.
7. ARSENOPYRITE. Panasqueira, Beira-Beixa, Portugal. Fine, bright silvery sharp terminated crystals to nearly \( \frac{3}{4} \) in size, attractively scattered on a matrix of intergrown rosettes of Muscovite Mica with minor greyish metallic crystals of Galena in association. The reverse of the specimen is encrusted with small tan coloured lenticular crystals of Siderite. 3x4x1\( \frac{1}{4} \). £14.

8. ARTHURITE. Hingston Down Mine, Nr. Callington, Cornwall. Rich apple green coloured crystalline crust covering Granite matrix. 3x2\( \frac{1}{4} \). £3.50.

9. ATACAMITE. Duke of Cornwall Mine, Kadina, S. Australia. Specimen A - Choice, lustrous bright green cellular mass of intergrown, small, elongated crystals to 4 mm. in length, 2x1\( \frac{1}{4} \). £7; Specimen B - A pure cellular botryoidal bright green crystalline mass of unusual form. 2x1\( \frac{1}{4} \)x1\( \frac{1}{4} \). £4.50.

10. AXINITE. Botallack, St. Just, Cornwall. Specimen A - Bright, clove brown sharp terminated crystals to 1 cm. in size, thickly lining cavities in massive Axinite. 2x1\( \frac{1}{4} \)x1\( \frac{1}{4} \). £7; Specimen B - As specimen A with the crystals being slightly smaller - 2x1\( \frac{1}{2} \). £3.25; Specimen C - A very sharp, well formed bright crystal approx. 1 cm. in size, associated with smaller crystals free-standing on massive Axinite. 1x1\( \frac{1}{4} \). £3.25.

11. AZURITE. Moldava, Banat Dist., Hungary. Choice, bright blue, sparkling small crystals thickly lining a large 2x\( \frac{1}{2} \) cavity in a matrix composed of crystalline Azurite, silky light green Malachite and a little light brown Limonite. 2x1\( \frac{1}{4} \)x1\( \frac{1}{4} \). £11.

12. BABINGTONITE. Arendal, Norway. Sharp, lustrous, bluish black crystals to 4 mm. in size, intergrown on an area 1 cm. x 8 mm. on Garnet rich matrix. 2x1\( \frac{1}{4} \). £2.50.

13. BARYTES. Settlingstones Mine, Hexham, Northumberland. Specimen A - Very choice, dome shaped, specimen completely encrusted on all sides with lustrous white, sharp, bladed crystals of Barytes ranging in size up to \( \frac{1}{2} \). Excellent specimen for display. 5x3x3\( \frac{1}{4} \) high. £22; Specimen B - Very lustrous, translucent, sharp wedge shaped crystals mostly around 1 cm. in size, free-standing on and completely encrusting massive Barytes matrix. Sample is completely free of damage and is choice for display. 4x2\( \frac{1}{4} \)x1\( \frac{1}{2} \). £13.

14. BARYTES. Hailemoor Mine, Nr. Egremont, Cumberland. Fine, lustrous, creamy white bladed crystals with a slight pinkish colouration, ranging in size up to 1", attractively intergrown on massive crystalline Barytes. Certain of the crystal faces are partially encrusted with small bright complex Calcite crystals. Very attractive specimen. 3\( \frac{1}{2} \)x3x2\( \frac{1}{2} \). £11.

15. BARYTES. Silverband Mine, Great Dun Fell, Westmoreland. An unusual sharp tabular well formed single crystal with modified faces, of a greyish, translucent, colour showing faint internal pale yellowish colour zoning. 2x1\( \frac{1}{4} \). £2.50.

16. BARYTOCALCITE. Blagill Mine, Alston Moor, Cumberland. Select, sharp, terminated elongated creamy coloured crystals, mostly around 6 mm. in length, thickly encrusting and free-standing on matrix. 1x1\( \frac{1}{4} \). £2.25.

17. BERYL variety AQUAMARINE. Tongafeno, Madagascar. Elongated hexagonal crystals and crystal sections of a pale bluish colour to 1\( \frac{1}{2} \)" in length, sparsely scattered in massive vein Quartz. 3\( \frac{1}{2} \)x2x1\( \frac{1}{4} \). £2.50.
18. **BETA-URANOPHANE.** Margnac, Haute-Vienne, France. Pale yellowish sharp micro crystals scattered and intergrown on Uraniferous matrix, which contains odd blobs of blackish Pitchblende and orangey yellow Gummitite. $1\frac{1}{4}x1\frac{1}{2}x1\frac{1}{4}"$. £3.25.

19. **NATIVE BISMUTH.** Wheal Sparron, Redruth, Cornwall. Very rich, bright metallic crystalline mass intergrown with minor greyish Smaltite and a little reddened Quartz. $1\frac{1}{4}x1\frac{1}{2}x1"$. £4.50.

20. **BISMUTHINITE.** Carrock Mine, Jaldbeck, Cumberland. Greyish metallic blades and needies, slightly tarnished in places, richly embedded in Quartz/Wolframite/Limonite/Scheelite matrix. £1.65.

21. **BISMUTITE.** Schneeberg, Saxony, Germany. Very rich pale yellowish brown waxy mass associated with much metallic crystalline Bismuth and minor Limonite. $2\frac{1}{4}x1\frac{1}{4}x1\frac{1}{4}"$. £6.50.

22. **BOURNONTITE.** Herodsfoot Mine, Lanreath, Cornwall. Very choice metallic silvery grey bladed crystals, some showing the cog-wheel development, and ranging up to $\frac{3}{4}"$ in size, richly scattered and intergrown on Quartz/Slate matrix with numerous bright well formed pyramidal crystals of Quartz and odd lustrous brown crystals of Siderite in association. $4\frac{1}{2}x4\times2\frac{1}{2}"$. £65.

23. **CALCITE.** Sweetwater Mine, Iron Co., Missouri, U.S.A. A large single tapering, well terminated, crystal, creamy white at its base grading to a golden colour at its termination, showing parallel growth on one face and a $1\times1"$ area of intergrown bright Galena and golden Chalcopyrite crystals implanted on it. Overall size $3\times2\frac{1}{4}"$ base $x 1\frac{1}{4}"$ long. £6.50.

24. **CALCITE.** Levant Mine, Peneden, Cornwall. Choice, bright, creamy white delicate platy rosettes of crystals to $\frac{3}{4}"$ in size, thickly intergrown on Quartz/Pyrite veinstuff. $2\frac{1}{4}x1\frac{1}{4}x1\frac{1}{4}"$. £6.50.

25. **CALCITE.** Blackdown Mine, Weardale, Co. Durham. Fine, transparent to translucent very sharp flattened "nail head" crystals to $\frac{3}{4}"$ in size, free standing on and richly scattered over Siderite matrix. $3\times3\frac{1}{2}"$. £25.

26. **CALCITE.** Wyndham Pit, Nr. Egremont, Cumberland. Choice, transparent, sharp terminated modified crystals to $\frac{3}{4}"$ in length, forming a pure intergrown mass with some of the crystals containing inclusions of dendritic Limonite giving them an unusual brownish black colour. Fine old specimen. $4\times3\frac{1}{4}"$. £25.

27. **CALCITE.** Midelt, Atlas Mts., Morocco. A large dish-shaped cavity $3\frac{1}{4}x2\frac{1}{2}"$ in size, in nodular shaped matrix, $1\frac{3}{4}x3\frac{1}{2}x2"$, completely lined with very lustrous, transparent, sharp terminated creamy coloured crystals mostly around $\frac{1}{2}"$ in length. Very attractive for display. £8.

28. **CASSITERITE.** Wheal Kitty, St. Agnes, Cornwall. Select, lustrous, blackish, sharp twinned crystals mostly around 3 mm. in size, thickly lining large cavities in Quartz/Slate matrix with odd blades of Wolframite, small sharp silvery crystals of Arsenopyrite and a large mass of golden Chalcopyrite in association. $2\times2\frac{1}{2}"$. £9.

29. **CASSITERITE.** Great Wheel Vor, Breage, Cornwall. Very sharp, bright black, elongated crystals of the "sparable" habit, ranging in size to 5 mm., thickly encrusting Tourmaline rich veinstuff. $2\times1\frac{1}{4}"$. £8.

30. **CELESTITE.** Barry Island, Nr. Cardiff, Glamorgan. Lustrous, transparent, very sharp, well formed colourless crystals to 1 cm. in size thickly intergrown on massive Celestite. $2\frac{1}{4}x1\frac{1}{2}x1\frac{1}{4}"$. £3.50.
31. CERUSSITE. Susanna Vein, Leadhills, Lanarkshire, Scotland. Lustrous, creamy, sharp well formed crystals to 5 mm. in size, thickly intergrown and covering a \( \frac{1}{2} \times 1" \) area on matrix, with much light green crystalline Pyromorphite in association. £4.50.

32. CERUSSITE. Pentireglaze Mine, St. Minver, Cornwall. Lustrous, creamy, "jack-straw" crystals to \( \frac{1}{2} " \) in length, scattered over blackish Psilomelane coated Quartz veinstuff. 4\( \times \)2\( \times \)1\( \frac{1}{2} " \). £6.50.

33. HALCEDONY Pseudomorphous after Octahedral Fluorite. Wheal Mary Ann, Menheniot, Cornwall. An unusually large, sharp, replaced octahedral crystal of a creamy white colour, with faces of 1" in size, associated with several smaller crystals all intergrown on massive Chalcedony. 2\( \frac{1}{2} \times 2 \times 1" \). £9.50.

34. HALCEDONY. North Roskear Mine, Camborne, Cornwall. An unusual dark creamy coloured stalactitic mass, the longest "stalactite" being 1\( \frac{1}{2} " \) in length, Overall size 2\( \times \)1\( \times 2 " \) high. £2.50.

35. CHALCOCITE. Wheal Cock, St. Just, Cornwall. Choice, large, sharp platy hexagonal crystals to 1 cm. in size, completely replaced by slightly tarnished Bornite and golden Chalcopyrite, thickly intergrown and completely encrusting massive Bornite matrix. 3\( \times \)2\( \times \)1\( \frac{1}{2} " \). £23.

36. CHALCOPYRITE. Carn Brea Mine, Illogan, Cornwall. Well formed brassy sphenoidal crystals to \( \frac{1}{4} " \) in size, thinly scattered on crystallised Quartz veinstuff, with much lenticular light brown Siderite and a little blackish Specularite in association. 3\( \times \)1\( \frac{1}{2} " \). £3.25.

37. CHALCOPYRITE variety "BlisterCopper". Wheal Basset, Illogan, Cornwall. Select, very bright brassy, botryoidal mass covering massive tarnished Chalcopyrite. 3\( \times \)1\( \frac{1}{2} " \). £4.50.

38. CHALCOPYRITE. Phoenix Mine, Linkinhorne, Cornwall. Light, reddish small needly crystals and felt-like masses aggregated in small cavities in Chalcopyrite rich veinstuff with very minor Malachite in association. 1\( \frac{1}{4} \times 1 \frac{1}{2} \times 1 " \). £2.50.

39. CHILDRENITE. George & Charlotte Mine, Tavistock Hamlets, Devon. Sparkling small sharp coffee coloured crystals richly encrusting Chalcopyrite/Siderite matrix. 1\( \times \)1\( \times \)\( \frac{3}{4} " \). £2.50.

40. NATIVE COPPER. South Jaradon Mine, St. Cleer, Cornwall. Choice, very rich, bright metallic hackly mass associated with and cementing fragments of white Quartz with odd areas of steely black Malachite. Rich specimen from this famous old mine. 3\( \frac{1}{4} \times 3 \frac{1}{4} " \). £13.

41. NATIVE COPPER. Santa Rita, New Mexico, U.S.A. Bright, metallic, crystallised dendritic ramifying mass with very minor attached fragments of matrix. Overall size 2\( \frac{1}{4} \times 1\frac{1}{2} \times 1 " \). £3.25.

42. NATIVE COPPER. Great Condurrow Mine, Nr. Camborne, Cornwall. Hackly, flat, ramifying pure mass with very minor Cuprite in association. 1\( \frac{1}{2} \times 1 " \). 80p.

43. CRONSTEDTITE. Litosice, Zelezne Hory Mts., Czechoslovakia. Unusual blackish crystalline bands of Cronstedtite running in parallel right through a matrix of brecciated Slate and light pinkish Dialogite. The uppermost surface of the specimen, which immediately overlies the bands of Cronstedtite, is covered with a thin botryoidal crust of pale creamy pink Dialogite. 2\( \frac{1}{4} \times 2\frac{1}{2} \times 1 \frac{1}{2} " \). £6.50.
44. CUPRITE. Carn Brea Mine, Illogan, Cornwall. Superb, bright maroon red, pure cellular masses composed of numerous bright sharp octahedral crystals intergrown together and associated with a little metallic Native Copper. The Cuprite crystals range in size up to 3 mm. on edge and many have an attractive slight iridescent tarnish. The samples were all collected early last century whilst the mine was at its peak. Specimen A - 4x3x2". £33; Specimen B - 2½x2x1½". £16.50; Specimen C - 2x1½x1¼". £9; Specimen D - 1½x1¼x1". £6.50; Specimen E - with slightly more Native Copper in association - ¾x¾". £1.50.

45. DESCOLOISITE. Berg Aukas, Otavi, S.W. Africa. Very lustrous light orangey brown crystals arranged in parallel growth, and somewhat resembling 'fir trees', forming a pure cellular mass. 2x1½x1". £6.50.

46. DIOPSIDE. Bancroft, Ontario, Canada. Lustrous, olive green, well formed terminated crystals to ½" in size, thickly intergrown on massive Diopside/Garnet matrix with odd small Garnet crystals in association. 1½x1½x½". £7.

47. DUFRENEITE. Phoenix Mine, Linkinhorne, Cornwall. Two dark greenish botryoidal masses each approx. ½" in size, implanted on Quartzose veinstuff with odd smaller masses of Dufrenite. 1x1½x1½". £3.25.

48. ENARGITE. Stewart Mine, Butte, Silver Bow Co., Montana, U.S.A. Bright, steely grey, well formed crystals to ½" in size, intergrown on a 1x1 area on matrix together with several bright golden modified crystals of Pyrite, mostly around ¼" in size. 2½x2½x½". £7.50.

49. FLUORITE. Hilton Mine, Scordale, Westmorland. Transparent bright golden yellow sharp cubic crystals to 1 cm. in size, thickly intergrown on a 1x1 area on massive Fluorite with creamy white bladed Barytes crystals in association. 2½x1½x1½". £5.

50. GALENA. Blackdene Mine, Weardale, Co. Durham. Choice, very bright; silvery grey large well formed modified cubic crystals ranging in size to ½" on edge, forming an intergrown mass on Galena/Fluorite matrix. Good specimen for display. 4x3½x2". £16.50.

51. GALENA. Wirksworth, Derbyshire. A pure bright cleavage mass with crystal faces developed along one side of the specimen which are encrusted with transparent doubly terminated creamy coloured scalenohedral crystals of Calcite to 1 cm. in size. 2x1½x1½". £3.75.

52. GOETHITE. Restormel Royal Iron Mine, Lostwithiel, Cornwall. Very fine bright blackish sharp elongated terminated crystals to ¼" in length, thickly intergrown and lining very large cavities in Goethite/Quartz/Hematite matrix, and with a 3½x2½" area of the surface of the specimen completely covered by intergrown Goethite crystals. 4½x4x2½". £24.

53. GOETHITE. Bisbee, Cochise Co., Arizona, U.S.A. Pure, bright, radiated chocolate brown coloured bladed crystalline mass. 2x1½x1½". £3.50.

54. GROSSULARITE variety HESSONITE. Val d'ala, Piedmont, Italy. Spec. A - Sharp, bright, orangey 'gemmy' crystals, mostly around 2 -3 mm. in size, associated with several sharp, translucent creamy coloured crystals of Apatite to 4 mm. in size, and minor greenish Clinohlore, encrusting matrix. 2½x2x1¼". £9; Specimen B - Bright orangey sharp transparent crystals mostly around 3 mm. in size thickly intergrown and scattered on matrix with greenish crystallised Clinohlore in association. 2½x1½". £7; Specimen C - As Specimen B - 1½x1½". £4.50.
55. **HEMATITE.** Itabira, Minas Gerais, Brazil. Choice, very large, brilliant black well-formed crystals to 1" on face edge, forming an intergrown group. Some of the crystal faces show interesting triangular etch patterns. 2½x2x1½". £14.

56. **HEMMORPHITE.** Mapimi, Durango, Mexico. Lustrous, sharp, transparent elongated terminated crystals mostly around ½" in length, thickly aggregated and scattered over cellular Limonite with numerous sharp creamy white rhombic crystals of Calcite to 1 cm. in size in association. 3½x2½x1½". £11.

57. **HEULANDITE.** Poona, India. Very bright, pearly white, sharp crystals to 1 cm. in size, thickly intergrown and encrusting Basalt. 3½x2". £5.50.

58. **MAGNETITE.** Traversella, Piedmont, Italy. Lustrous black well-formed modified crystals, to 6 mm. in size, partially embedded in and richly scattered in Chlorite matrix, with a 1x1" mass of creamy resinous SCHHEELITE in association. 2½x2". £7.

59. **MALACHITE.** Concepcion del Oro, Zacatecas, Mexico. Fine, bright green delicate needly crystals thickly lining large cavities in cellular Quartz/Limonite matrix. Very attractive specimen. 4¼x3x2". £9.

60. **MALACHITE.** Creegbrawse Mine, Gwennap, Cornwall. Select, light green, lustrous slightly botryoidal rich mass with minor greyish Chalcocite and odd fragments of Quartz in association. 3x2½". £4.50.

61. **MALACHITE.** Roughtengill Mine, Caldbeck, Cumberland. Bright green needly crystals and silky masses richly lining cavities in slightly iron stained cellular Quartz. 2x1½x1". £1.75.

62. **MARCASITE.** Picher, Oklahoma, U.S.A. Choice, bright brassy metallic sharp well-formed crystals to ½" in size, very attractively aggregated and scattered on a sharp bright silvery grey portion of a Galena crystal with minor crystalised Ruby Sphalerite in association. 1⅓x1⅓x1¼". £7.

63. **MILLERITE.** Coed Ely Colliery, Nr. Llantrisant, Glamorgan. Specimen A - Bright golden metallic delicate needly crystals to ⅛" in length, forming a spray 8 mm. x 7 mm. on Siderite/Ironstone matrix. 2x1½x1\(\frac{3}{4}\)". £9; Specimen B - Metallic needly crystals to ⅜" in length forming a star-like aggregate on crystalised Siderite matrix. 1½x1⅓". £1.50.

64. **MIMETITE.** Driggeth Mine, Caldbeck, Cumberland. Lustrous, pale green coloured, curved baral shaped crystals to 3 mm. in size, thickly encrusting cellular Quartz veinstuffed. Specimen A - with both sides covered in crystals, 2½x2x1¼". £2.50; Specimen B - 2x1⅓". £1.50; Specimen C - 1⅓x1⅓". £1.

65. **POSNJAKITE.** Drakewalls Mine, Gunnislake, Cornwall. Specimen A - Small, light blue, micro crystals richly aggregated and covering Slate matrix. 1½x1¼". £2.25; Specimen B - As Specimen A with the Posnjakite covering one side of the specimen. 1⅓x1¼". £1.25.

66. **PSEUDOMALACHITE.** Vrtnaberg Mine, Rheinbreitbach, Germany. Thick, deep green, crystalline crusts covering brecciated Quartz matrix with cavities lined with lustrous micro crystals. 1½x1½x1⅓". £3.25.

67. **PYRITES.** Trabzon-Artvin, Turkey. Sharp, bright brassy, well-formed single octahedral crystals. Each approx. ⅛" in size overall dimension. £1. each.

68. **PYRITES.** Wheal Mary Ann, Menheniot, Cornwall. Bright brassy modified cubic crystals to ¼" in size, thickly intergrown on crystalised milky Quartz. 1½x1½x1¼". £3.25.
69. **PYROPSITE.** Platten, Bohemia, C.S.S.R. Specimen A - Sharp, bright, silvery grey, small crystals richly encrusting a 1x1" area on massive radiated Pyrospite, with odd small cavities also lined with crystals. 3x1 1/4x1 1/4". £5.50; Specimen B - As Specimen A with the crystals thickly intergrown in a cellular pyramidal mass on matrix. 1x1½x1½". £3.25.

70. **PYROMORPHITE.** Braubach, Ems, Nassau, Germany. Thumb-nail to 1" sized groups of lustrous light brown sharp hexagonal crystals with very minor matrix attached. Price from 25p - 40p. each according to size and quality.

71. **PYROMORPHITE.** Tennant Creek, N. Terr., Australia. Light yellowish sharp terminated hexagonal crystals to ½" in size, thickly scattered over brownish Limonite matrix. 2½x1½". £2.75.

72. **PYROMORPHITE.** South Mine, Broken Hill, N.S. Wales, Australia. Bright lustrous yellowish green sharp hexagonal crystals to 4 mm. in size, thickly intergrown and encrusting matrix. 2x1½". £3.25.

73. **QUARTZ variety ROCK CRYSTAL.** Hot Springs, Arkansas, U.S.A. Specimen A - A plate composed of numerous water clear, sharp, elongated, terminated hexagonal crystals. The crystals range in length up to 1" and there is only very minor damage, the specimen being choice for display. 5x3½". £7; Specimen B - A large, terminated, slightly milky sharp elongated crystal approx. 2" long x 1½" across the axis, with another clear well terminated crystal, 1¼" long x ¾" across the axis, protruding at right angles from it. Overall size 3x2½". £3.25; Specimen C - As specimen A with the crystals to 1" in size, 2¼x1½x1 ½". £2.25.

74. **QUARTZ.** Forest of Dean, Gloucestershire. Bright, sharp, transparent doubly terminated crystals, mostly around 5 mm. in size, with some having a slight reddish colouration due to inclusions of Hematite, thickly encrusting cellular Limonite. 3x2". £1.50.

75. **QUARTZ.** Wheal Jane, Kea, Cornwall. Very bright, clear, long slender terminated crystals mostly around 1 cm. in length, thickly encrusting Quartz/Pyrite veinstuff. 2½x1¼x1 ½". £2.75.

76. **QUARTZ.** Boltsburn Mine, Rockhope, Co. Durham. Lustrous, milky coloured, sharp doubly terminated pyramidal crystals to ½" in size, thickly intergrown and encrusting a portion of a large, light purplish, cubic Fluorite crystal. 4x2½x2½". £5.50.

77. **QUARTZ variety AMETHYST.** Las Vigas, Vera Cruz, Mexico. Two hexagonal Amethyst coloured lustrous crystals in parallel growth, each showing good sharp pyramidal terminations. The crystals are clear at their terminations grading through to translucent at their bases. 1½" long x ½x½" across the axis. £2.75.

78. **RHODOCHROSITE (Pseudo. after Calcite crystals).** Kassandra, Chalkidiki, Greece. Large, light pink, rhombic crystals of Calcite to ½" on edge, replaced by Rhodochrosite and frosted over with bright, sparkling, drusy Quartz crystals, intergrown on a 2½x1½" area on matrix with odd scattered bright brassy Pyrite crystals and numerous small Quartz crystals in association. 5x3x1½". £1.4.

79. **RHODONITE.** Broken Hill, N.S. Wales, Australia. Specimen A - Lustrous, raspberry red, slightly rounded well formed crystals to ½" in size, richly embedded in and scattered through massive Galena/Sphalerite veinstuff. 3½x3x1½". £9; Specimen B - An intergrown group of large, translucent, slightly rounded well formed raspberry red crystals, the largest being approx. 1" in size, with very minor Galena attachment. 1¾x1½x½". £3.50.
80. SIDERITE. Morro Velho Goldmine, Minas Gerais, Brazil. Specimen A - Lustrous, translucent, tan coloured sharp lenticular crystals to 1 cm. in size, thickly intergrown on Schist matrix and associated with lenticular creamy white Jalcite crystals and odd micro crystals of Pyrrhotite. 3x2". £3.25; Specimen B - Very lustrous translucent tan coloured lenticular crystals to over ½" in size, forming a pure intergrown group with odd scattered brassy hexagonal crystals of Pyrrhotite in association. 1¼x1½". £2.75.

81. SIDERITE. Wheal Owls, St. Just, Cornwall. Unusual, large, deep brown lenticular crystals to ½" in size, thickly intergrown on Schist matrix and associated with lenticular creamy white Jalcite crystals and odd micro crystals of Pyrrhotite. £3. £2.50.

82. SMITHSONITE. Tsumeb, Otavi, S.W.Africa. Choice, lustrous, translucent, large, very sharp creamy crystals to over 1" in size, thickly intergrown and completely covering a dome shaped matrix. 2½x2¼x1½". £11.

83. SMITHSONITE. Weardale, Alston Moor, Cumberland. Lustrous, pale greenish yellow, thick botryoidal mass with very minor matrix attached. There are small areas of whitish Hydrozincite in some cavities. Very rich specimen for this old location. 2½x2¼x1½". £7.75.

84. SMITHSONITE. El Cobre, Chihuahua, Mexico. Bright, lustrous, light pinkish purple, pure botryoidal mass of attractive shape and form. Good specimen for display. 3¼x2½"x1". £7.

85. SPHALERITE. Kapnik, Rumania. Choice, bright black, very large crystals to ½" on face edge, intergrown on massive Spalerite, with odd greyish metallic well formed crystals of TETRAHEDRITE to 3 mm. in size, scattered on them together with odd platy creamy crystals of Calcite and radiated aggregates of Quartz crystals. Interesting and rich specimen. 3¼x2¼x1½". £13.

86. SPHALERITE. Pribram, Bohemia, J.S.S.R. Transparent to Translucent pale honey coloured well formed "gemmy" crystals, mostly around 2 - 3 mm. in size, richly scattered over small crystals of milky Quartz covering two sides of Quartzose veinstuff. 2½x2¼x1½". £9.

87. SPHALERITE. Alston Moor, Cumberland. Bright black, well formed crystals to ½" in size, thickly intergrown and completely covering massive Spalerite with a partial later encrustation of creamy "nail head" Jalcite crystals to ½" in size, attractive old time specimen. 6x5x1½". £13.

88. STIBNITE. Glendinning Mine, Westerkirk, Dumfries, Scotland. Very rich, silvery grey, bladed metallic mass with a little fine grained brownish black Spalerite in association, together with odd greyish masses of Semseyite. 3¼x2¼x1½". £3.50.

89. STIBNITE. Pereta, Tuscany, Italy. Select, bright silvery grey, long, thick divergent blades richly aggregated in creamy Dolomite/Quartz matrix. 3¼x2¼x1½". £4.50.

90. STIBNITE. Old Kilpatrick, Renfrew, Scotland. Lustrous, brick red coloured sharp crystals to 3 mm. in size, thickly intergrown and scattered on a cellular matrix. 2x2½". £3.

91. STRONTIANITE. Whitesmith Mine, Strontian, Argyllshire, Scotland. Rich, lustrous, lime green coloured crystalline masses, with a radiated structure in places, associated with creamy white Barytes. Specimen A - 3¼x2x1¼", £3.75; Specimen B - 2x1½". £2.25.
92. **TENANTITE.** Wheel Jewel, Gwennap, Cornwall. Fine, bright, greyish well formed crystals to 3 mm. in size, thickly lining a large 1½x1½" cavity in cellular Chalcopyrite veinstuff, with odd smaller cavities also lined with Tennantite. 2½x1½x1½". £16.50.

93. **TENORITE.** Copper Queen Mine, Bisbee, Cochise Co., Arizona, U.S.A. Very rich, lustrous black, mass partially enclosing kernels of deep red CUPRITE, with a later greenish crust of Malachite on the Tenorite. 2½x2". £3.50.

94. **TITANITE (SPHENE).** Val Cristallina, Graubunden, Switzerland. Choice, translucent sharp terminated olive green crystals, with slightly brownish tips, scattered on Chlorite coated intergrown crystals of Adularia covering matrix. The largest crystal is approx. 1 cm. in size, 2½x1½x1½". £1.5.

95. **TYROLITE.** Schwaz, Tyrol, Austria. Specimen A - Rich, light green, radiated crystal aggregates to ½" in size, aggregated and scattered on quartz matrix with odd traces of Azurite. 3½x2½x1½". £8; Specimen B - Light green, radial crystal aggregates to 5 mm. in size, richly scattered on two sides of matrix with odd small masses of bluish Azurite. 2½x1½x1½". £5.50; Specimen C - As Specimen A - 1½x1½". £3.25.

96. **VANADINITE.** Apache Mine, Mr. Globe, Gila Co., Arizona, U.S.A. Specimen A - Bright orangey red, sharp hexagonal crystals to 5 mm. in size, thickly encrusting a 2x1½" area on matrix. 3x2½". £5.50; Specimen B - Smaller, bright orangey red, sharp hexagonal crystals mostly around 1 - 2 cm. in size, richly scattered over matrix. 3x2½". £2.50.

97. **WITHERITE.** Fellowfield Mine, Hexham, Northumberland. Select, well formed, pseudo-hexagonal crystals of a lustrous creamy colour, to ½" in size, and with a thin later encrustation of whitish Barytes, thickly intergrown on massive Witherite. 2½x1½x1½". £3.

98. **WOLFRAMITE.** Castle an Dinas Mine, St. Jolomb, Cornwall. Rich, lustrous black, bladed mass intergrown with minor Quartz. The specimen shows the banded "lit-par-lit" structure which was characteristic of this mine. 2½x2¼x1½". £2.75.

99. **WULFENITE.** Chihuahua, Mexico. Bright, transparent dark yellowish blocky crystals to 4 mm. in size, richly scattered over slightly botryoidal pale green Mimetite on cellular yellowish brown Mimetite matrix. 2½x2¼x1½". £7.

100. **WULFENITE.** Stephanie Mine, Mezica, Slovenia, Yugoslavia. Specimen A - Choice, bright orangey, tabular crystals, with sharp well formed faces and ranging up to 1 cm. in size, forming a pure intergrown cellular mass. 2½x1½x1½". £9; Specimen B - Light yellowish platy crystals to over 1 cm. in size, forming a pure intergrown cellular mass with very minor matrix attached. 2½x1½x1½". £4.50; Specimen C - Bright orangey thin tabular crystals to 1 cm. in size, forming a pure intergrown mass. 1½x1½". £2.50; Specimen D - As Specimen C with the crystals being slightly smaller. 1½x1½". £1.25.

Wishing you all a very happy Christmas and a Prosperous New Year!
