ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised the contrary.

Special requests and "Wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

JANUARY 1978

1. AXELRINE. Broken Hill, N.S. Wales, Australia. Small sharp glassy transparent twinned crystals richly scattered over cellular brown limonitic gossan with odd green coated Chalcopyrite crystals and a little Cerussite. 3x1½x1½", £6.50p

2. AXENITE. Mallinson Mine, nr. Egremont, Cumberland. Slightly iridescent lustrous brown to black sharp crystals thickly covering a cellular matrix with a little crystalline Quartz. 3x2x1½", £3.25p

3. APATITE. St. Gotthard, Ticino, Switzerland. Sharp transparent cream-coloured crystals to 4 cm in size scattered over matrix with odd chlorite coated well formed crystals of AXELRINE to ½ in size in association. 2½x1½", £6.50p

4. ARSENOPYRITE. Mina Noche Buena, Zacatecas, Mexico. Fine bright silvery sharp terminated elongated crystals to 1 cm in length thickly covering a pyrite matrix with odd silvery-gray noddy crystals of Boulangerite. Attractive specimen. 3x2x1½", £15.00

5. ATACAMITE. Rochline, Atacama Desert, Chile. Very rich deep green bladed crystalline mass. 2½x1½x1½", £3.25p

6. ATACOLITE. Vasatara, Suden. Rich pinkish mass associated with platy biotite mica. 2x1", £1.75p

7. AZURITE. Tyrone Mine, Co. Galway, Eire. Rich bright blue crystal rosettes and thick crystalline crusts scattered on quartzose matrix with odd patches of greenish Malachite. Individual crystal rosettes range up to ⅛ in size. 3x2x1½", £4.50p

8. AZURITE. Laurium, Attica District, Greece. Very rich bright blue botryoidal crusts of small sparkling crystals thickly covering limonitic matrix. 4x3½x1½", £14.00

9. BAYETES. Wootton Mine, Wensleydale, Yorkshire. Sharp lustrous creamy-coloured wedge-like crystals to ½ in size thickly covering and free-standing on matrix. 3x2½x1½", £4.50p

10. BAYLDONITE. Wheel Carpenter, Gwinear, Cornwall. Lime green coloured rich crusts of sparkling micro crystals covering areas on and lining cavities in quartz veinstuff. 2½x1½", £3.25p.

11. BORNITE. Corn Brea Mine, Illogan, Cornwall. Small sharp tarnished cubic crystals scattered on one end of cellular quartzose veinstuff. ½x1½", £4.50p

12. BOLANDITE. Hephaist, Pirunia. Silvery-grey twinned cog-wheel crystals to 3 mm in size aggregated and scattered on translucent light brownish Sphalerite crystals to ½ in size covering matrix. 3½x2½x1½", £13.00
13. BRAUNITE. Spekervy, Smelnd, Sweden. Sparkling blackish micro crystals richly lining cavities in massive grey braunite. $2 \times 1 \times 1\"$, £1.50p

14. CALCITE. Boltaburnt Mine, Rookhope, Co. Durham. Intergrown group of large creamy to greyish sharp, flat nail-head crystals to $2^{1/2}\"$ in size. Attractive specimen for display. $6 \times 4 \times 2\"$, £9.00

15. CALCITE. Nalca, Chihuahua, Mexico. Select snow-white large sharp rhombic crystal 1\" on face edges, implanted on matrix with odd smaller Calcite crystals and a little well crystallised black Sphalerite and odd small crystals of brassy Pyrites. $3 \times 2 \times 1\frac{1}{2}\"$, £8.00

16. CALCITE. Florence Mine, Egremont, Cumberland. An intergrown group of very lustrous tapering translucent creamy coloured terminated crystals to 1\" in length. An interesting old label accompanies the specimen. $3 \times 2 \times 1\frac{1}{2}\"$, £4.50p

17. CASSITERITE. St. Agnes, Cornwall. Lustrous blackish to deep brown sharp crystals to 3 mm in size richly scattered over both sides of a massive cassiterite matrix. An old label is attached to the specimen. $2 \frac{1}{4} \times 2 \times 1\frac{1}{4}\"$, £7.00

18. CASSITERITE. Kili Hill Mine, Callington, Cornwall. Heavy deep brown crystalline mass associated with a little black tourmaline and with a 1\" area of very bright translucent brownish sharp crystals to 4 mm in size on one surface. $2 \frac{1}{4} \times 1 \frac{1}{2} \times 1\frac{1}{4}\"$, £4.75p

19. CASSITERITE. Lialagua, Potosi, Bolivia. Select group of bright black sharp twinned crystals to nearly 3\" in size on massive cassiterite. 1\"x1\", £6.50p

20. CELESTITE. Yale, near Bristol, Gloucestershire. Specimen A: Choice lustrous orangy coloured tabular crystals to nearly 3\" in size thickly intergrown on massive celestite. $3 \times 2 \times 1\frac{1}{2}\"$, £3.25p. Specimen B: As specimen A, $12 \times 2 \times 1\frac{1}{2}\"$, £1.25p

21. CERULEITE. Wheal Grind, St. Day, Cornwall. Specimen A: Rich light blue micro crystallised crusts on and in cellular quartz matrix with much lustrous well crystallised OLIVENITE in association. $1 \frac{1}{4} \times 1 \frac{1}{2} \times 1\"$, £6.50p. Specimen B: Rich light blue crusts on and in gossan matrix. $1 \frac{1}{4} \times 1 \frac{1}{2} \times 1\", £2.75p

22. CERUSSITE. Proprietary Mine, Broken Hill, N.S. Wales, Australia. Very choice lustrous creamy-white large twinned tabular crystals to 2\" in size intergrown on a dark limonitic matrix. Fine specimen for display, which was collected early this century from the highest workings of the mine. $4 \times 3 \frac{1}{2} \times 2\", £38.00

23. CERUSSITE. Tsumeb, Otavi, S.W. Africa. Specimen A: Choice very lustrous glassy clear sharp twinned crystals to 1 cm in size richly scattered over matrix with creamy dolomite crystals in association. $4 \times 2 \times 1\frac{1}{2}\", £16.50p. Specimen B: As specimen A but with crystals to only 1\" in size. $3 \times 1 \times 1\", £5.50p

24. CHALCOALUMITE. Grandview Mine, Grand Canyon, Arizona, U.S.A. Sky blue slightly botryoidal silky crusts lining joints in limonitic matrix. $1 \frac{1}{2} \times 1\", £1.25p

25. CHALCOCITE. Ticnfrw Mine, Illogan, Cornwall. Specimen A: Select bright silvery-grey well formed striated crystals to 3\" in size thickly lining a $1 \times 2 \times 1\" cavity in matrix. $1 \frac{3}{4} \times 1\", £11.00. Specimen B: Choice bright silvery-grey well formed twinned crystals to 4 mm in size thickly intergrown and covering matrix. $1 \times 1\", £6.50p

26. CHALCOCITE. Tromith Mine, St. Ives, Cornwall. Rich heavy greyish metallic mass associated with a little tarnished sphalerite. $2 \times 1 \times 1\", £2.25p

27. CHALCOPYRTE. Silverton, Colorado, U.S.A. Select tarnished brassy twinned crystals to over 2\" in size intergrown on matrix with a little crystallised milky quartz and curved light brown crystals of siderite and a little pyrites. $2 \times 2 \times 1\frac{1}{2}\", £11

28. CHILDRENITE. George & Charlotte Mine, nr. Tavistock, Devon. Specimen A: Choice coffee coloured sparkly sharp crystals to 1 mm in size richly covering large areas of altered vein-stuff. $3 \times 2\", £9.00. Specimen B: Lustrous coffee coloured sharp sparkling crystals mostly around 1 mm in size richly lining cavities in siderite matrix. $1 \frac{1}{4} \times 1\", £4.75p. Specimen C: As specimen B, but not quite so rich. $1 \frac{1}{4}\" x 1\", £3.25p.
29. CHRYSOCOLLA. Tates Drift, Wanlockhead, Dumfries, Scotland. Rich bright blue thick slightly botryoidal crust covering matrix with a little redly green Mescalite. 2½x1½", £1.25p

30. CHRYSOCOLLA. Morenci Mine, Arizona, U.S.A. Rich bluish-green mass with the surface covered with botryoidal chalcopyrite which has a colourful bright greenish tint due to the underlying chrysocolla. 2x4½x1", £4.50p

31. COBALITE. Hakamicho, Vastmanland, Sweden. Select bright silvery sharp crystal nearly 4 mm in size partially embedded in pyrophylite matrix. 1½x1½x1", £6.50p

32. NATIVE COPPER. Wheal Garland, St. Day, Cornwall. Rich metallic mackly masses and small crystals scattered and aggregated on quartzose matrix, with a little crystallised Cuprite on the reverse side. 2½x2", £2.25p

33. NATIVE COPPER. Trevector Mine, Guernsey, Cornwall. Specimen A: Select sharp elongated spiky crystals and dendritic masses forming an intergrown mass with a little milky quartz. The crystals range in size up to 1 cm. 2½x2". £11.00
   Specimen B: Rich bright metallic branching mass of small sharp crystals with a little quartz. Overall size 2x1", £3.50p

34. CROCITE. Kupi Mine, Dundas, Tasmania, Australia. Specimen A: Bright orangey sharp terminated crystals to 4 mm in length richly scattered over both sides of limonitic matrix and with small light green PYROMORPHITE crystals in association. 2½x1½", £3.25p. Specimen B: As specimen A, but with the crystals on one side only. 1½x1", £1.25p.

35. CUPRITE. South Carnon Mine, St. Cleer, Cornwall. Choice bright dark reddish sharp octahedral crystals to 3 mm in size richly lining numerous large cavities in cellular quartz matrix and with a little blackish Melaconite on one side. 2½x2½x1½", £17.00

36. CUPRITE. Poldory Mine, Guernsey, Cornwall. Deep reddish well formed modified crystals to 4 mm in size covering areas of milky quartz matrix. 2x2x1", £3.25p

37. CUPRITE. Tealcar Qtr., Goonhilly Down, Lizard, Cornwall. Rich dark reddish solid vein-section with greenish chrysocolla on the sides. 2x2" by ½" thick. £2.25p
   Specimen B: Rich lustrous deep reddish vein-section associated with bands of greenish chrysocolla. 1½x1½", £1.50p

44. CUPRAMONTE. Laurium, Attica District, Greece. Small sharp sparkling lime-green crystals thickly lining large cavities in brownish limonitic matrix. 3x2½", £6.50p

39. DOLOMITE. Smalcailleigh Mine, Nanhead, Cumberland. Lustrous creamy coloured sharp curved rhombic crystals thickly covering both sides of matrix with odd sharp bright metallic cubic crystals of Galena to 1 cm in size in association, and odd sharp crystals of Chalcopyrite. 3½x3x1½", £4.50p

40. DOLOMITE. Trezaq, Keras, U.S.A. Choice light pinkish sharp curved 'saddle-shaped' crystals thickly covering matrix with the reverse side showing small sharp bright shiny scattered crystals of Chalcopyrite. 5x4", £6.50p

41. EDENITE. Wilberforce, Ontario, Canada. Select lustrous blackish terminations and crystal sections to ½" in length partially embedded in creamy Calcite. 2x1½x1", £4.50p

42. EUKINITE. Ambohidranoe, Tananarive Province, Madagascar. Choice sharp terminated elongated single crystals with a slight surface alteration coating. Crystals each approx 1" in size, £3.25p each.

43. FLUORITE. Wheatland, Kent, Cornwall. Pale purple highly modified transparent cubic crystals to ½" in size clustered on a 1½" area on vein-fill with slender clear Quartz crystals and greenish crystallised Chlorite in association. The Fluorite crystals very much resemble those that were found in the mines around St. Agnes in the old days. 3x2x1½", £3.50p

44. FLUORITE. Nerchinsk, Ural Mts., Russia. Transparent very pale green highly modified crystals mostly around 3-4 mm in size richly lining several large cavities in a quartzose matrix. Very old specimen. 3x2x1½", £4.50p

45. GALENA. Joplin, Missouri, U.S.A. Choice bright metallic grey large composite single crystal showing interesting growth patterns on its faces. 2½x2½x2", £9.00
46. GALENA replacing PYROMORPHITE. Wheel Hope, Perranzabuloe, Cornwall. Sharp
elgated hexagonal pyromorphite crystals to 1 cm in length completely replaced by Galena richly scattered over a cellular matrix. $2\frac{1}{2} \times 2 \times 1\frac{1}{2}$", £14.00

47. GOETHITE. Botallack Mine, St. Just, Cornwall. Lustrous brownish banded-fibrous
mass with a 1\frac{1}{4} \times 1\frac{1}{2}" cavity lined with bright, clear sharp terminated Quartz
crystals to nearly \frac{1}{2}" in size. $3 \times 2\frac{1}{2} \times 1\frac{1}{2}$", £4.90p

48. NATIVE GOLD. Grass Valley, California, U.S.A. Very rich bright golden hackly mass
intermixed with milky quartz. \frac{1}{4}"", £14.00

49. NATIVE GOLD. Comstock lode, Nevada, U.S.A. Very rich heavy mass intermixed with
chalcopyrite and galena.1\frac{1}{4} \times 1", weight 35 gms. £33.00

50. HEMATITE. Rio Minero, Isle of Elba, Italy. Very choice lustrous black sharp large
crystals to 1" in size intergrown and free-standing on massive hematite matrix.
Fine specimen for display. \frac{1}{4}x3\frac{1}{4}"", £33.00

51. HEMIMORPHITE. Mina Ojuela, Mapimi, Durango, Mexico. Select lustrous sharp creamy
coloured terminated crystals to 1 cm in length thickly covering in sheaf-like aggregates a limonitic matrix. 4x3", £11.00

52. HEMIMORPHITE. Noble Pits, Sterling Hill, New Jersey, U.S.A. Lustrous creamy-white
well formed crystals and crystal sprays to \frac{1}{2}" in size thickly intergrown and
covering both sides of matrix. 3x3\frac{1}{4}"", £13.00

53. HETERODENITE. Blue Jay Mine, Goodenings, Nevada, U.S.A. Rich greyish-black masses
aggred in calcite matrix. 3x2\frac{1}{2}"", £2.50p

54. HICORDALITE. Stokkaya, Langesundsfjorden, Norway. Light brown bladed crystal
sections to 5 mm in length scattered in nepheline-syenite. Specimen A: 3x1\frac{1}{2}x1", £2.75p. Specimen B: 1\frac{1}{2}x1", £1.25p

55. ILMENITE. Kragero, Norway. Choice black intergrown group of large distorted crystals
to 1" on face edge, and with interesting growth patterns on the crystal faces.
2\frac{1}{4}x2\frac{1}{2}x1\frac{1}{4}"", £11.00

56. JACOBITE. Langban, Varmland, Sweden. Very rich lustrous black crystalline mass.
1\frac{1}{4}"", £1.25p

57. KINITE. Christmas Mine, Gila Co., Arizona, U.S.A. Bright blue crystal aggregates
and thin crusts scattered in cavities in matrix with small clear crystals of
Apophyllite. 2x1\frac{1}{2}x1\frac{1}{2}"", £4.50p

58. KOTTIGITE. Mina Ojuela, Mapimi, Durango, Mexico. Sage-green elongated crystals and
crystal sprays to 4 mm in length scattered over both sides of limonitic matrix.
1\frac{1}{4}x1", £4.50p

59. LINNAEITE. Muenen, Westphalia, Germany. Small sharp silvery octahedral crystals to
over 1 mm in size sparsely scattered in cavities in massive tetrahedrite with
well formed lustrous grey crystals of Tetrahedrite to 4 mm in size and a little
crystallised Siderite. 1\frac{1}{4}"", £5.50p

60. LUONIGITE. Brosso Mine, Ivrea, Turin, Italy. Rich divergent silky blackish crystal-
line mass with a little bronzy pyromorphite. 2\frac{1}{4}x2\frac{1}{4}"", £3.25p

61. MALACHITE. Bisbee, Cochise Co., Arizona, U.S.A. Attractive bright green silky pure
crystalline mass giving a radiated structure in places. 2\frac{1}{4}x1\frac{1}{2}x1\frac{1}{4}"", £2.75p

62. MALACHITE. Concepcion del Oro, Zacatecas, Mexico. Select light green silky velvety
masses thickly covering a limonitic matrix with numerous lustrous creamy well
formed Calcite crystals to \frac{1}{2}" in size in association. 5x3\frac{3}{4}x3", £11.00

63. MANGANDAN DOLomite. Trepca, Yugoslavia. Specimen A: Choice lustrous pinkish small
sharp curved rhombo crystals richly covering matrix with bright clear Quartz
crystals, large lustrous black Sphalerite crystals to 1" in size and a little
crystallised Calcite in association. Very fine specimen for display.
6\frac{1}{2}x6\times2\frac{1}{2}"", £4.90p, Specimen B: Lustrous light pink crystal aggregates richly
scattered over matrix with bright black Sphalerite crystals to \frac{1}{2}" in size and
slender milky Quartz crystals in association. 4x3\frac{1}{2}x2", £14.00
64. **MELANITE** (variety of Andradite garnet). San Benito Co., California, U.S.A. Choice bright black sharp crystals to 4 mm in size thickly covering both sides of matrix. Very choice specimen for display. 3x2x1½". £23.00

65. **MINERITE**. Taumeb, Ovai, S.W. Africa. Lustrous orangy-yellow crystals and crystal clusters to ¼" in size richly scattered on matrix. 2½x1½x1". £4.50p.

67. **OLIVENITE**. Wheal Gorland, St. Day, Cornwall. Specimen A: Small sharp sparkling olivine crystals lining numerous cavities in cellular quartz matrix, with a little blackish Pseudomelane. 3x2x2". £7.00. Specimen B: Bright olivine-green needles crystals lining numerous cavities in quartz matrix. 1¼x1¼x1". £3.25p.

68. **OPALITE**. Napoleon Vein, Quiruvilcas, Libertad Dept., Peru. Select lustrous orangy Intergrown groups of sharp terminated crystals mostly around ½" in size. Specimen A: 2½x2½x½", £14.00. Specimen B: 2½x2x2", £11.00. Specimen C: 2½x1¼x1¾", £7.00. Specimen D: 1½x1½x1½", £4.50p.

70. **PHARMACOSIDERITE**. Wheal Pendraves, Camborne, Cornwall. Small bright green sharp cubic crystals lining cavities in cellular quartz/limonite vein-stuff. 3¼x2½x2", £6.00.

71. **PSEUDOMALACHITE**. Libethen, near Neusohl, Czechoslovakia. Very rich bright green mass with a little milky quartz, and a botryoidal structure in places. 1½x1½x1½", £3.25p.

72. **PYRITES**. Soria, Spain. Select very sharp and bright brassy single cubic crystals, some showing twinning. Each approx 1x1x1" in size, £3.25p each.

73. **PYROCLASITE**. Dillaton & Higstor Mine, Milton Abbot, Devon. A deep 1½x1½" cavity in matrix completely lined with bright greyish-black sharp spiky crystals. Very choice specimen for this location. 3x2x2", £9.00.

74. **PYROMORPHITE**. Braubach, Eme, Germany. Bright light brown sharp hexagonal crystals to 6 mm in size forming a pure intergrown cellular heavy mass with sharp crystals completely covering the surface, and with odd creamy-white twinned Cerussite crystals in places. 3x2½x1½", £33.00.

75. **PYROMORPHITE**. Leadville, Lake Country, Scotland. Lustrous pale green small well formed crystals thickly covering the surface and sides of a cellular matrix. 1½x1", £1.50p.

76. **PYROPHYLLITE**. Indian Gulch, Mariposa Co., California, U.S.A. Creamy coloured silky radiated crystal masses to nearly 1" in diameter aggregated on and in matrix. 3x2½x1½", £4.50p.

77. **QUARTZ**. Batallack Mine, St. Just, Cornwall. Select sharp clear terminated crystals to 2" in size completely covering a quartz/chlorite matrix, and with black spiny crystals of **SPELUNKARITE** enclosed in the Quartz crystals. Fine specimen for display. 5¼x3x2", £14.00.

78. **QUARTZ**. Beckwith Mine, Isle of Man. Very bright sparkling clusters of clear small pyramidal crystals thickly covering quartz matrix. Unusual and attractive specimen. 4x3x1½", £9.00.

79. **QUARTZ**. Kassandra Mine, Chalkidiki, Greece. Sharp milky elongated terminated crystals to over ½" in length completely covering and free-standing on matrix with numerous striated cubic Pyrites crystals to 5 mm in size in association. 4½x2x1½", £11.00.

80. **SCORODITE**. Hemerdon Hill openworks, Plympton, Devon. Specimen A: Fine light bluish to greenish clear sharp crystals to 2 mm in size richly lining large cavities on quartz/greisen matrix. 2½x1¼x1½", £6.00. Specimen B: Lustrous sparkling light blue to greenish sharp crystals richly lining cavities in quartz matrix. 2½x2x1½", £4.50p. Specimen C: Lustrous light greenish to greyish sharp crystals to 2 mm in size lining cavities in greisen matrix. 1½x1½x1¼", £2.25p.
81. SIDERITE. Morro Velho gold mine, Ouro Preto, Minas Gerais, Brazil. Choice bright light brown sharp lenticular crystals to ½" in size scattered over matrix and associated with creamy transparent rhombic Dolomite crystals and odd small brassy hexagonal Pyrrhotite crystals. 4×3½x1¼", £6.00

82. NATIVE SILVER. Broken Hill, N.S. Wales, Australia. Silvery spongey crystalline masses and small wires aggregated on and in cellular Galena matrix. 1½x1¼x1¼", £5.65p

83. SMITHSONITE. Taunus, Otavi, S.W. Africa. Choice large sharp light purplish coloured rhombic Dolomite crystals to nearly ½" in size, intergrown on crystalline smithsonite matrix. Usually large crystals for this mineral. 2¼x2½x1¼", £22.00

84. SPHALERITE. Threlkeld Mine, Threlkeld, Cumberland. Bright black sharp crystals to 4 mm in size richly scattered over milky quartz veinstuff. 3x2½x1¼", £5.50p

85. SPHALERITE. Wheal Jane, Hes, Cornwall. Large lustrous black polysynthetic twinned crystal ½x1½" in size implanted on quartzose matrix with elongated Quartz crystals and odd small Pyrites crystals in association. 2½x1¼x1¼", £4.50p. Specimen B: Bright black intergrown group of sharp crystals to ½" in size. 1½x1¼", £1.50p.

86. SPHALERITE variety SCHAUMBURG. Prasram, Bohemia, Czechoslovakia. Pure creamy to light brown well banded mass showing a botryoidal structure in cavities. 3x2½x1¼", £3.25p

87. STAINITE. East Pool Mine, Illogan, Cornwall. Rich metallic gray tarnished masses in milky quartz on granite matrix. 3x2½x1¼", £2.75p

88. STIBNITE. Wheal Boys, St. Endellion, Cornwall. Metallic gray bladed crystalline mass with included fragments of slate. 2½x1¼x1¼", £1.50p

89. STILPNOELMELANE. Landavark, Evje, Norway. Greenish grayish mass and scales richly scattered on creamy microcline feldspar. 1¼x1¼x1¼", £2.25p

90. TARbuttite. No. 2 Kopje, Broken Hill Mine, Kabwe, Zambia. Lustrous sparkling small sharp crystals to pale greenish crystals thinly covered limonitic matrix with odd small frosty creamy coloured PARAFOSEITE crystals scattered on the tarbuttite. 3½x2½x1¼", £11.05

92. TORSERITE. Tryphena Mine, Camborne, Cornwall. Deep green sharp tabular crystals to 2 mm in size scattered on iron-stained altered granite. 1½x1¼x1¼", £2.25p

93. TOURMALINE variety DRAVITE. Yinnitharra, Western Australia. Select bright brownish sharp doubly terminated single crystals. Specimen A: 2½x2½x2", £7.00. Specimen B: 2½x2½x1¼", £3.50p.

94. VANADINITE. Old Yuma Mine, Arizona, U.S.A. Bright orangey sharp hexagonal crystals to 4 mm in length richly scattered over calcite matrix. 2½x1¼x1¼", £2.25p

95. VARISCITE. Avant, Arkansas, U.S.A. Select apple-green thick crystalline crusts lining cavities in brecciated matrix with odd light green radiated masses of WAVELETTE to over ½" in diameter with their surfaces showing distinct crystal faces. 3¼x3x2", £8.00

96. WILLENMITE. Franklin, Sussex Co., New Jersey, U.S.A. A portion of a large reddish to creamy coloured large crystal showing some good faces. 1½x1", £2.25p

97. WITHERITE. Fellowfield Mine, Hexham, Northumberland. Lustrous creamy coloured well formed bi-pyramidal crystals to 1 cm in size thickly encrusting both sides of massive Witherite matrix. 4½x3x2", £14.00

98. WOLFRAMITE. East Pool Mine, Illogan, Cornwall. Very rich bright black large bladed crystal masses associated with a little milky quartz and chlorite. An old label is attached to the specimen. 5x3¼x1¼", £8.00

99. WOLFEENITE. Taunus, Otavi, S.W. Africa. Light brown sharp tabular crystals to ½" in size scattered over a cellular quartz matrix with much light greenish small tufts of Malachite in association. 2½x2½x1¼", £4.75p

100. ZIRCON. Sierra del Goldas, Minas Gerais, Brazil. Lustrous brownish-red pure crystal mass. 1½x1¼x1", £2.50p
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special request and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

FEBRUARY 1978

1. ANGLESITE. Broken Hill, N.S. Wales, Australia. Small sharp sparkling glassy crystals to 3 mm in size thickly covering an intergrown mass of creamy bladed CERUSSITE crystals. 2½x2x1½", £7.00

2. ARAGONITE. Buckfastleigh, Dartmoor, Devon. Specimen A: Select lustrous creamy white divergent crystal spray 1½" in length growing from an intergrown mass of crystals with a little brownish Ankerite. 1½x1½x1", £3.50p. Specimen B: Intergrown group of lustrous translucent creamy-white crystals to 1½" in length on Ankerite matrix. 1½x1", £1.50p. Specimen C: Lustrous creamy-white divergent crystal spray with no matrix attached. 1½x1½", £0.80p.

3. AZURITE. Tsumeb, Otavi, S.W. Africa. Bright blue small sharp crystals to 4 mm in size scattered on cellular azurite/chalcocite matrix. 2x2x1½", £4.50p

4. AZURITE. Tynagh Mine, Co. Galway, Eire. Select cellular mass of bright blue small sharp sparkling crystals with minor limonite in places. 3½x2½x1½", £11.00

5. BARYTES. Mt. Wellington Mine, Twelveheads, Cornwall. Specimen A: Lustrous well formed terminated greyish crystals to 1 cm in size aggregated in groups to ½" and scattered over tarnished Chalcopyrite crystals to 8 mm in size covering massive chalcopyrite matrix. 4½x3x2½", £16.50p. Specimen B: Translucent greyish to creamy coloured lustrous crystals to ½" in size thickly scattered over milky pyramidal quartz crystals covering quartzose vein-stuff. 2½x2x2", £8.00. Specimen C: As specimen B, but covering chalcopyrite matrix. 2½x1½", £4.75p. Specimen D: As specimen B, but with odd Pyrites crystals in association and covering iridescent chalcopyrite matrix. 1½x1½", £3.50p. These specimens resemble the old samples that were found last century in the Ale & Cakes mine in Gwennap; barytes is a rare mineral in the Cornish orefield.

6. BARYTES. Hilton Mine, Scordale, Westmoreland. Specimen A: Select transparent water-clear tabular terminated crystal group. 1½x1½", £1.75p. Specimen B: Water-clear single crystals and crystal groups, each approx 1½x1", £1.25p each.

7. BERZELIANITE. Söderman, Bohemia, C.S.S.R. Tarnished greyish masses and threads impregnating creamy Calcite. 3x2x1½", £4.50p

8. BERYL variety EMERALD. Muzo, nr. Bogota, Colombia. Transparent emerald green well formed hexagonal crystals and crystal sections to ½" in length scattered on a ½" area on quartz/crystalline Emerald matrix. 1½x1", £14.00

9. BERZELIANITE. Sríkerum, nr. Tryserum, Kalmar, Sweden. Rich greyish masses and threads impregnating creamy Calcite. 3x2x1½", £4.50p
10. NATIVE BISMUTH. Schneeberg, Saxony, Germany. Specimen A: Very rich bright silvery-grey metallic crystalline masses intergrown with milky quartz, with odd small quartz crystals lining cavities. 2½x1½x1½", £6.50p. Specimen B: As specimen A, 1½x1½x1½", £4.50p. Specimen C: As specimen A, 1½x1½", £2.50p. Specimen D, as specimen A, 1½x1½", £1.25p each. Minor amounts of greyish SAFFLUORITE are associated with the Bismuth in all the specimens.

13. BROCHANTITE. Blanshard Claims, Bingham, New Mexico, U.S.A. Light green silky needly crystals richly scattered over quartz matrix. 2½x1½x1½", £3.50p.

15. CALCITE. Mendip Hills, Somerset. Specimen A: Lustrous transparent sharp complex crystals, some with a faint brownish tinge due to inclusions of iron oxide, to 5 mm in size thickly covering a greyish Pyrolusite matrix. 4½x4½x2", £6.50p. Specimen B: Bright clear complex crystals to 3 mm in size, with one very large crystal 1 cm in size, thickly scattered over creamy 'dog-tooth' Calcite crystals to 1" in size on calcite matrix. 3½x2½x3", £4.75p.

16. CALCITE. Burtree Pastures Mine, Wearhead, Co. Durham. Select creamy-white sharp rhombic crystals to 1" in size dotted on Dolomite matrix with a transparent pale bluish Fluorite crystal 1½" in size. 3½x2½x1½", £5.50p.

17. CALCITE. Botallack Mine, St. Just, Cornwall. Lustrous creamy-white sharp platy hexagonal crystal rosettes to 1 cm in size attractively scattered and free-standing on milky quartz matrix. 3x2½x1½", £6.00.

18. CALCITE. Santa Domingo, Chihuahua, Mexico. Specimen A: Translucent creamy coloured sharp rhombic crystals with a brownish tinge due to inclusions of iron-oxide and up to ⅜" in size, richly scattered over a large scalenohedral Calcite crystal. 3⅝x2½x1½", £6.50p. Specimen B: Select very lustrous sharp translucent creamy coloured crystals with an internal reddish tinge, to 2" in size aggregated in parallel growth with no matrix attached. 3⅝x2½x1½", £2.75p.

19. CASSITERITE. Blue Hills Mine, St. Agnes, Cornwall. Choice bright blackish sharp twinned crystals to ¼" in size thickly intergrown and covering large areas of a cellular chlorite/quartz veinstuff. 4½x3½x2½", £28.00.

20. CASSITERITE. Killifrith Mine, Chacewater, Cornwall. Lustrous brownish crude twinned crystals to nearly ⅜" in size intergrown and scattered over cassiterite/quartz matrix. 5x2", £8.00.

21. CASSITERITE. Wheal Jewell, Marytavy, Devon. Very rich heavy lustrous brown mass with a little chlorite and quartz, and with odd small crystals lining cavities. 3½x2½x1½", £9.00.

22. Dolcoath Mine, Camborne, Cornwall. Very rich light brown crystalline mass, with a little hematite and quartz and with numerous elongated crystal sections in places. 2½x2½x1½", £2.50p.

24. CELESTITE. Clay Centre, Ohio, U.S.A. Choice translucent pale blue terminated tabular crystals to 1" in length free-standing on a matrix of intergrown lustrous sharp rhombic creamy CALCITE crystals to ½" in size. 4½x2½x2", £13.00.

25. CERUSCITE. Dundas, Tasmania, Australia. Lustrous creamy-white reticulated tabular crystal sections to ⅜" in size intergrown on Limonite matrix. 2x1½", £3.25p.

27. CHALCOCITE. Sharptor Mine, Linkinhorne, Cornwall. Very rich metallic grey heavy mass with a little quartz in association. 2x2x1 1/2", £1.65p.

28. CHALCOCITE. Cokeh Kitchen Mine, Camborne, Cornwall. Small sharp greyish crystals scattered over a fine bluish and iridescently tarnished botryoidal mass of Chalcopyrite of the form known as BLISTER COPPER by the old miners. 3x2x1 1/4", £16.50p.

29. COLEMANITE. Pacific Coast Mine, Boron, California, U.S.A. Silky creamy coloured sharp crystals to 8 mm in size scattered over light brown Calcite crystals. 2x1", £1.25p.

30. NATIVE COPPER. Wolverine Mine, Keweenaw Pen., Michigan, U.S.A. Pure bright metallic hackly mass with odd patches of slightly tarnished NATIVE SILVER in places. 3x2x1 1/4", £10.00.

32. CUPRITE. Carn Brea Mine, Illogan, Cornwall. Bright red sparkling cellular mass of small sharp octahedral crystals with a little Native Copper in association. 2 1/2x1 1/2x1", £7.00.

33. CUPRITE. Wheal Unity, Gwennap, Cornwall. Specimen A: Deep red lustrous well formed octahedral crystals to 3 mm in size scattered on and lining small cavities in a crystalline mass of cuprite with a little quartz. 1 1/2x1 1/2", £4.50p. Specimen B: Select sparkling cellular masses of small sharp crystals associated with Native Copper. Each approx 1x1", £1.50p each.

34. CUPRITE. Broken Hill, N.S. Wales, Australia. Sharp malachite coated greenish cubic crystals to 4 mm in size richly scattered over a creamy Cerussite/Cuprite matrix, with odd reticulated crystals of Cerussite. 1x1 1/4x1", £9.00.

35. DANBURITE. Charcas, San Luis Potosi, Mexico. Choice creamy to transparent sharp well terminated tabular single crystals. Each approx 1" long, £1.25p each.

36. DIOPTASE. Alytyn-Tube, Kirghese Steppes, Russia. Bright emerald green crystals and crystal sections to 1 cm in size scattered on and partially embedded in a creamy calcite matrix. 1 1/2x1 1/2x1", £8.00.

37. DOLOMITE. Traversella, Piedmont, Italy. Sharp creamy coloured rhombic crystals to 1" in size thickly intergrown on small sparkling milky Quartz crystals covering matrix. 2x2x1 1/2", £8.50p.

38. DUFTITE. Tsumeb, Otavi, S.W. Africa. Covering all Calcite crystals on association. 2 1/2x2x1 1/2", £5.50p.

39. DUFRENITE. Phoenix Mine, Linkinhorne, Cornwall. Deep greenish lustrous thick radiated crusts and botryoidal masses covering cellular limonite/quartz veinstuff. 1 1/2x1 1/2x1", £5.50p.

40. EMARGITE. Leonard Mine, Butte, Montana, U.S.A. Specimen A: Choice bright metallic grey sharp terminated crystals to 1 cm in length scattered over pyrites matrix with numerous bright small sharp Pyrites crystals in association. 2 1/2x2x1 1/2", £14.00. Specimen B: Choice bright metallic grey terminated crystals to 1 cm in size richly covering matrix with a little crystallised Quartz and Pyrites in association. 1 1/2x1 1/2x1", £8.00.

41. EPIDOTE. Val d'Ala, Piedmont, Italy. Lustrous olive-green crystal sections to 1/2" in length intergrown in cavities in massive Epidote. 2 1/2x2x1 1/2", £3.25p.

42. FLUORITE. Naica, Chihuahua, Mexico. Fine light purple transparent stepped cubic crystals to 1/2" in size thickly intergrown and covering matrix. 4x2 1/2x1 1/2", £8.00.

43. FLUORITE. Heights Mine, Weardale, Co. Durham. Select transparent bright green single sharp inter-penetrant twinned crystals, each approx 1x1" in size. £4.50p each.

44. FLUORITE. Altenburg, Saxony, Germany. Light purple translucent well formed cubic crystals with modified edges, to 1/2" in size scattered over small Quartz crystals on quartzose matrix with a little crystalline Hematite in association. 2x2x1 1/2", £4.00.
45. GALENA. Sweetwater Mine, Ellington, Missouri, U.S.A. Choice sharp bright silvery-grey octahedral crystals to 1/2" in size thickly scattered over matrix with sharp creamy rhombic Dolomite crystals in association. 3 1/2 x 2 1/2 x 1 1/2", £13.00

46. GALENA. Clausthal, Harz, Germany. Silvery-grey well formed modified cubic crystals to 1 cm in size scattered over matrix and associated with numerous small creamy Doimestone crystals. 4 x 2 1/2 x 1 1/2", £6.00

47. HARMOTONE. Bellsgrove Mine, Strontian, Argyllshire, Scotland. Choice lustrous white sharp twinned crystals to over 3" in size scattered on Calcite matrix. 3 1/2 x 2 1/2 x 1 1/2", £5.50p

48. HEULANDITE. Botallack Mine, St. Just, Cornwall. Small sharp clear creamy crystals richly covering large areas of altered greenstone. 2 x 1 1/2 x 1 1/2", £3.25p

49. HYALITE. Mt. Arci, Sardinia. Select transparent glassy botryoidal mass covering myiolite. 2 x 1 1/2 x 1 1/2", £2.50p

50. INESITE. Hale Creek Mine, near Ruth, Trinity Co., California, U.S.A. Very choice lustrous pink sharp terminated crystals to 1/2" in size completely lining very large cavities in matrix. Very rich specimen of this mineral. 3 x 2 1/2 x 1 1/2", £44.00

51. INESITE. Broken Hill, N.S. Wales, Australia. Lustrous light brown to pinkish radiated crystalline masses to nearly 1" in size embedded in matrix. 2 1/2 x 2 x 1 1/2", £4.50p

52. JAMESONITE. Sombrerete, Zacatecas, Mexico. Select bright silvery-grey pure mass of interlocking bladed crystals. 2 1/2 x 1 1/2", £8.00

53. JAROSITE. Capo Calamita, Isle of Elba, Italy. Bright sparkling small sharp crystals richly lining cavities in limonitic matrix. 2 x 1 1/2 x 1", £5.50p

54. KYANITE. Copelinha, Minas Gerais, Brazil. Lustrous light bluish bladed crystal masses, each approx 2 x 1" in size, £0.80p each.

55. LISKERDITE. Penberthy Croft Mine, St. Hilary, Cornwall. Snow-white thick crystalline crusts lining cavities in cellular sulphidic veinstuff. Specimen A, very rich in Liskerdite, 2 1/2 x 1 1/2 x 1 1/2", £4.50p. Specimen B: 1 1/2 x 1 1/2 x 1", £2.50p

56. MALACHITE after Azurite. Burra Burra, Yorke Pen., S. Australia. Fine replacement of clusters of Azurite crystals to 1" in size by bright green Malachite, with a later encrustation of waxy green Chrysocolla and with odd small yellow tabular sulphide crystals in places. The replaced Azurite completely covers a brownish matrix. 3 x 1 1/2 x 1 1/2", £13.00

57. MALACHITE. Burra Burra, Yorke Pen., S. Australia. Specimen A: Small sharp bright green crystals and crystal masses covering crudely formed and Malachite replaced Azurite crystals to nearly 1 cm in size on limonitic matrix. 2 1/2 x 2 1/2 x 1 1/2", £6.00. Specimen B: Thin tabular Azurite crystals completely replaced by Malachite, encrusting botryoidal Malachite covering limonitic matrix. 2 1/2 x 1 1/2 x 1", £3.25p

58. MALACHITE. Kambove, Katanga, Zaire. Fine bright green velvety needly crystal sprays and tufts richly scattered all over a blackish psilomelane/limonite matrix. Very attractive specimen for display. 6 1/2 x 5 x 2", £38.00

59. MARCASITE. Shakespeare Cliff, Folkstone, Kent. Select bright brassy sharp twinned crystal groups with individual crystals to over 1" in size. Each approx 2 1/2 x 1/2", £1.25p each.

60. MILLERITE. Caedley Colliery, nr. Llantrisant, Glamorgan. Bright brassy needly divergent crystal spray 1" in length lying flat on creamy-white lenticular siderite crystals on ironstone matrix. 2 1/2 x 2 x 1 1/2", £9.00

61. MINIETITE. Tsumeb, Otavi, S.W. Africa. Lustrous transparent pale yellowish sharp elongated terminated crystals to 1 cm in length very richly covering a sulphidic matrix. 4 x 3", £33.00

62. NICKEL-IRON METEORITE. Henbury Crater, N. Terr., Australia. Choice metallic silvery irrecrable mass with a pitted surface. 2 1/2 x 2 x 1 1/2", weight 175 grammes. £44.00

63. OLIVENITE. variety WOOD COPPER. Wheal Unity, Guennap, Cornwall. Pale olive green pure, sintered fibrous crystalline mass with a silky surface. 1 1/2 x 1 1/2 x 1", £3.25p
**64. ORPIMENT.** Quiruvilca, Libertad Dept., Peru. Specimen A: Lustrous light orangey-yellow sharp terminated crystals to 1 cm in size intergrown on pyritic matrix. 2½x1½x1", £3.00. Specimen B: Orangey coloured well formed terminated crystals to ⅛" in size intergrown on a 1x2" area on pyritic matrix. 1½x1¼x1", £3.25p. Specimen C: Cluster of light orangey sharp terminated crystals, to 1 cm in size. 1x1½x½", £1.50p.

**66. OSUMILITE.** Mt. Arci, Sardinia. Small sharp pale orange to greyish crystals scattered in cavities in rhyolite matrix with drusy Quartz. 2x1½x1½", £2.75p.

**67. PIEMONTITE.** Jacobsberg, Norrköping, Sweden. Light reddish masses scattered in creamy dolomite matrix. 2½x1½x1½", £2.50p.

**68. PLATNERITE.** Mina Ojuela, Mapimi, Durango, Mexico. Specimen A: Small black sharp sparkling crystals scattered on limonitic gossan with a little whitish Hydrozincite and platy translucent crystals of Calcite. 2½x1¼x1¼", £4.50p. Specimen B: Small sparkling black crystals scattered over limonitic gossan. 2½x1¼x1¼", £2.50p. Specimen C: As specimen A, 1x1", £1.50p.

**70. PREHNITE.** Boylestone Quarry, Barnhead, Renfrew, Scotland. Lustrous lime-green botryoidal crystal masses thickly lining a 1¼x1½" cavity in a 1½" wide vein of crystaline Prehnite cutting basalt matrix. 3½x3½x1½", £4.75p.

**71. PYRITES.** Quiruvilca, Libertad Dept., Peru. Specimen A: Very fine bright brassy large sharp modified pyritohedral crystals to ⅛" in size thickly intergrown on a plate of massive pyrites. Very choice specimen for display. 6½x4½x4½", £8.50. Specimen B: Very bright brassy sharp striated cubic crystals to ⅛" in size intergrown and covering a massive pyrite matrix with a 2x1½" area of metallic grey unusually etched GALENA crystals, together with a little Sphalerite. Fine display specimen. 4½x3x2½", £28.00.

**72. PYRITES.** Kilmente Mine, Uganda. A very large bright brassy well formed OCTAHERDROAL crystal showing good faces, and with two smaller crystals attached, together with a little dark bronzey massive Pyrrhotite. Crystal faces on the larger crystal are 2" in size, overall size of specimen 2½x2½x2½", £5.00.

**73. PYROMORPHITE.** South Mine, Broken Hill, N.S. Wales, Australia. Specimen A: Lustrous lime-green small feathery crystals thickly covering a brown limonitic matrix; very attractive sample. 3x2½x1½", £8.00. Specimen B: Lustrous light brown well formed elongated crystals to 5 mm in length forming a rich cellular mass. 1¼x1½x1½", £3.25p.

**74. PYRRHOTITE.** Trepca, Yugoslavia. A tarnished brownish composite barrel-like hexagonal crystal 7" in size implanted on matrix with small milky Quartz crystals and a little crystallised iron-pyrites. 2½x1½x1½", £3.50p.

**75. PYRRHOTITE.** Meldon, Dartmoor, Devon. Pure bright bronzay metallic mass with odd patches of blackish Sphalerite. 2½x1½x1½", £1.50p.

**76. QUARTZ.** Wheal Jane, Ken, Cornwall. Specimen A: Sharp clear bright elongated terminated crystals with a slight greenish tinge due to inclusions of chlorite, to ⅛" in length and completely covering and free-standing on a quartz matrix with odd bright brassy crystals of Chalcopyrite to ¼" in size scattered amongst the crystals of quartz. 4½x4½x1½", £11.00. Specimen B: Sharp elongated terminated clear crystals with a slight milky tinge, to over ⅛" in length and completely covering quartz matrix with odd small bright brassy cubic crystals of Pyrites. 3x3½x½", £6.50p. Specimen C: Lustrous milky elongated terminated crystals to 1" in length free-standing on quartz matrix. 2½x1½x1¼", £3.50p. All the above specimens are ideal for display purposes.

**77. QUARTZ.** Wheal Cock, St. Just, Cornwall. Clear bright pyramidal crystals to ⅛" in size intergrown on iron matrix with inclusions of brownish red-iron like GOETHITE crystals inside the quartz crystals. 3½x2½x1½", £4.50p.
78. QUARTZ. Botallack Mine, St. Just, Cornwall. Corroded pyramidal crystals to 1" in size covering quartz matrix and with an attractive iridescent crust of micro crystallised Chalcopyrite and a little crystallised Calcite covering the Quartz crystals. 4x3x1½", £2.50p

79. QUARTZ. Hodbarrow Mine, Millom, Cumberland. Bright clear sharp pyramidal crystals, some being doubly terminated, to 8 mm in size, lining a 2½x2" cavity in botryoidal reddish-brown brecciated HEMATITE. 3½x3x2½", £4.75p

80. RHODOLEITE GARNET. Meacon Co., N. Carolina, U.S.A. Light raspberry red crystals and crystal sections to ½" in size thickly embedded in Phlogopite matrix. 5½x3½x3½", £14.00

81. SCHOLZITE. Reaphook Hill, Flinders Range, S. Australia. Silky white radiated crystal sprays to 1 cm in length spanning a 1½" cavity in limonitic matrix. 2½x2½x1½", £4.50p

82. SCORODITE. Cligga Mine, Perranzabuloe, Cornwall. Micro crystallised pale greenish crusts covering a heavy black bladed mass of WOLFRAMITE. 2½x2½x1½", £2.75p

83. SIDERITE. Neudorf, Harz, Germany. Select lustrous light brown curved rhombic crystals and crystal 'balls' to ½" in size scattered over matrix with odd clear sparkling Quartz crystals. 3x2½x1½", £5.50p

84. SIDERITE. Wheal Jane, Kea, Cornwall. Specimen A: Light creamy brown needly crystals richly scattered over a group of large clear to milky elongated terminated QUARTZ crystals to 1½" in length. 3½x2½x1½", £7.00. Specimen B: Light brown lustrous elongated rod-like crystals to 4 mm in length richly scattered over quartz matrix with odd Quartz crystals and a little Sphalerite. 3½x1½x1½", £2.75p

85. NATIVE SILVER. Comstock Lode, Virginia City, Nevada, U.S.A. Very rich slightly tarnished mass of curled wires with a little crystalline greyish SMITHSONITE. 1x1", £14.00

86. NATIVE SILVER. Cobalt, Ontario, Canada. Rich silvery-grey rounded heavy mass with greyish Smaltite and thin crusts of pinkish Erythrite in association. 1½x1½", £4.50p

87. SMITHSONITE. Broken Hill, nr. Kabwe, Zambia. Specimen A: Choice large translucent creamy crystals of rhombic habit, to nearly ½" in size thickly intergrown in clusters and covering a cellular matrix. Very fine specimen. 5½x2½x1½", £3.00. Specimen B: Unusual elongated tapering rod-like crystals to ½" in length thickly lining a large cavity and covering the surface of cellular limonitic matrix. 5x4x3½", £23.00. Specimen C: Cellular intergrown mass of lustrous light brownish clear sharp rhombic crystals to 4 mm in size. 2½x2½x1½", £7.00. Specimen D: As specimen C, 1½x1½", £2.25p

88. STRONTIANITE. Clausthal, Harz, Germany. Creamy coloured tapering crystal sprays to ½" in length richly covering creamy barytes matrix. 2½x2", £3.50p

89. TETRAHEDRITE. Rancagua, Chile. Very rich bright silvery-grey metallic mass with a little quartz and pyrites in association. 2½x2½x1½", £4.50p

90. THOMSONITE. Ballyclare, Co. Antrim, N. Ireland. Silky crystalline radiated crystal masses lining a 1½x1½" area on basalt matrix with odd needly crystals of Scolecite. 2½x2", £2.75p

91. TOURMALINE. Alto Lighona, Mozambique. Select lustrous olive-green feathery terminated composite crystal. 4½" long by 3½" across the axis. £23.00

92. TOURMALINE variety SCHORL. Dolcerrow Dryr., Luxulyan, Cornwall. Bright black elongated crystals and crystal sections to ¾" in length associated with slightly smoky Quartz crystals and a little crystallised Albite on pegmatite matrix. 3½x2½x1½", £4.50p

93. TURQUOISE. Sleeping Beauty Pit, Arizona, U.S.A. Turquoise blue solid veinlet 4 mm thick cutting a reddish-brown matrix. 2½x1½", £2.25p

95. WOLFRAMITE. Kapnik, Rumania. Unusual bright black weep shaped crystals to ½" in size scattered on creamy crystallised dolo cute on sulphidic matrix. 2½x2½x1½", £9.00

96. ZOISITE var. THULITE. Lon, Norway. Pure pinkish mass. 2½x1½", £1.50p
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special request and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

MARCH 1978

1. ACTINOLITE. Zillertal, Tyrol, Austria. Rich lustrous olive-green divergent bladed crystalline mass with minor schist. 4½ x 2 x 1½", £6.50p

3. ALMANDINE GARNET. Roxbury, Connecticut, U.S.A. Select raspberry-red lustrous sharp crystals to 1" in size, one showing good twinning, embedded in chlorite schist. Attractive sample for display. 5 x 4 x 2½", £16.50p.

4. ANACIME, Dean Qry., Lizard, Cornwall. Lustrous snow-white sharp crystals and crystal sections to ½" in diameter encrusting gabbro matrix with a little light greenish crystalised Prehnite in association. 4 x 3 x 1½", £9.00.

5. ANDRADITE GARNET. San Benito Co., California, U.S.A. Choice bright 'gemmy' golden sharp crystals to 3 mm in size dotted on serpentine matrix. This variety of Andradite is known as TOPAZOLITE. Specimen A: 2½ x 1½", £4.50p. Specimen B: not so rich as specimen A, 2 x 1½", £3.25p.

7. ARSENOPYRITE. Kingston Down, near Callington, Cornwall. Specimen A: Bright silvery sharp crystals to 4 mm in size covering tourmaline/arsenopyrite matrix with odd small quartz crystals and creamy hexagonal APATITE crystals and crystal sections to ¼" in size in association. 3½ x 1½ x 1½", £5.50p. Specimen B: Bright silvery sharp crystals to 1 cm in size scattered on matrix with needlely greenish crystals of Tourmaline and a little quartz. 3½ x 2", £4.50p.

8. ARTINITE. San Benito Co., California, U.S.A. Specimen A: Choice snow-white radiated masses of needle crystals richly scattered over serpentine matrix. 3 x 2½ x 2", £6.50p. Specimen B: As specimen A, 2½ x 1½ x 1½", £3.25p. Specimen C: As specimen A, 2 x 1½", £2.50p. All are very attractive specimens from a new occurrence in California.

9. ATACAMITE. Mina la Farola, Copiapo, Chile. Specimen A: Very choice bright green tabular crystals aggregated in radial sprays and thickly covering matrix. 2½ x 2", £18.00. Specimen B: Attractive bright green radiated groups of tabular crystals scattered on greenish Chrysocolle on matrix. 3 x 2", £11.00. Specimen C: Bright green tabular and needlely crystals thickly covering matrix, with greenish-blue Chrysocolle on the reverse. 2½ x 2", £6.50p. Specimen D: Bright green divergent crystal sprays on bluish-green Chrysocolle on matrix. 1½ x 1½ x 1", £4.50p.
10. AXINITE. Botallack, St. Just, Cornwall. Lustrous clove-brown sharp crystals to 1" in size lining a 1x1" cavity in crystalline axinite. £6.50

11. AZURITE. Henderson Mine, Bisbee, Arizona, U.S.A. Choice bright blue ball-like crystalline masses attractively encrusting and cotted over quartzose matrix with a little light green Malachite in association. £16.50

12. BARYTES. Dalmellington Mine, Frizington, Cumberland. Fine lustrous transparent pale golden coloured long tapering tabular crystals to 2½" in length richly scattered over and lying flat on hematite/talc matrix. The reverse side is completely encrusted with small very bright clear Barytes crystals to ½" in size. An old A.E. Fote (dealer of Philadelphia, U.S.A.) label is attached to the specimen. Choice sample for display. £110.00

13. BENITOITE. San Benito Co., California, U.S.A. Choice light blue sharp crystals to over 1 cm in size richly scattered on matrix with a little whitish Natrolite. Very fine example of this mineral; there is also a little micro crystallised pale brown JOAQUINITE on the matrix. £33.00

14. BENITOITE. Pribram, Bohemia, C.S.S.R. Lustrous creamy cox-comb crystal masses to ½" in size scattered on matrix with odd light yellow cubic crystals of FLUORITE to 1 cm in size in association. £8.00

15. BIXBYITE. Thomas Mts., Utah, U.S.A. Select lustrous black sharp cubic crystal 5x5 mm in size implanted on matrix. £6.50

16. BOURNITE. Herodsfoot Mine, Lanreath, Cornwall. Specimen A: Select silvery-grey intergrown group of twinned cog-wheel crystals, the largest being nearly 1" in diameter. Minor small milky crystals of Quartz in association. 1½x1", £13.00. Specimen B: Silvery-grey twinned cog-wheel crystals to 1 cm in size intergrown and scattered on cellular quartz. 1x1", £8.00

17. BOTALLACKITE. Levant Mine, Pendeen, Cornwall. Specimen A: Small bright green crystals scattered in a 1½x2" cavity in milky quartz. 2½x2x⅛", £6.50. Specimen B: Small light green lath-like crystals to 2 mm in size scattered on both sides of altered slate matrix. 2½x1½", £4.50. Specimen C: Minute light green crystals scattered on hematite/quartz matrix. 2½x⅛", £2.25

18. CALCITE. Carrock Mine, Caldbeck Fells, Cumberland. Choice lustrous creamy hexagonal crystals with flat terminations, to ½" in size completely covering and free-standing on matrix. Specimen A: 4x3", £7.00. Specimen B: 2x2½", £2.50

19. CALCITE. Tsumeb, Otavi, S.W. Africa. Choice transparent sharp rhombic crystals to over 2½" in size intergrown on matrix. Attractive specimen for display. 3x3x2", £8.00

20. CELESTITE. Madagascar. Choice transparent light blue sharp terminated crystals to ½" in size free-standing on and encrusting crystalline celestite matrix. £8.00

21. CERULEITE. Wheal Gorland, St. Day, Cornwall. Rich light blue crystalline crusts and crystal sections to ½" in size richly scattered on and embedded in quartz/tourmaline/gilbertite matrix. 2½x2x⅛", £6.50

22. CERUSSITE. Rum Jungle, N. Terr., Australia. Specimen A: Fine creamy coloured well formed reticulated crystal mass with much light green velvety botryoidal MALACHITE in association. £16.50. Specimen B: As specimen A, ½x1", £3.25
Wheatstone, Guernsey, Cornwall. Rich cellular mass of minute sparkling crystals with a little quartz. 2½x2½x1", £4.50p

36. **COPRISTE.** Copper Queen Mine, Bisbee, Arizona, U.S.A. Very rich heavy deep red mass with an alteration rim of malachite, and areas of silky fibrous malachite and small rossettes of crystallised azurite on the reverse side. 2½x2½x1", £4.75p

30. **DANALITE.** Xsjoberg, Vemland, Sweden. Rich reddish-brown masses in skarn with a little pyromorphite and fluorspar. 2¼x1½x1", £3.25p

31. **DANBURITE.** Russell, New York, U.S.A. Large tan coloured well formed and terminated crystal 1" in size implanted on massive danburite with smaller crystals. 2½x2½x1", £7.00

32. **DESCLOISITE.** Berg Aukas, Obavi, S.W. Africa. Specimen A: Unusual deep brown wedge-shaped crystals to 1 cm in size thickly intergrown all over cellular matrix. 3x2½x1", £12.00. Specimen B: Lustrous deep brown sharp crystals to 1 cm in size thickly intergrown on matrix. 2½x2½x1", £6.50p. Specimen C: Group of sharp lustrous deep brown crystals to over 1 cm in size intergrown on matrix. 1x1", £3.25p

33. **DICKENSONITE.** Foote Mine, King Mt., N. Carolina, U.S.A. Lustrous creamy-white small sharp crystals intergrown in cavities in feldspar. 1½x1½x1", £4.50p

34. **DIOPHYTE.** Tsawe, Obavi, S.W. Africa. Specimen A: Bright emerald green sharp crystals to nearly 1 cm in size intergrown on matrix with a little crystallised cerussite. 2½x2½x1", £16.50p. Specimen B: Sharp bright emerald green crystals to 4 mm in size intergrown and scattered on creamy calcite with a little light green duftite. 1½x1½x1", £6.50p

35. **DOLOMITE.** Eugui, Pamplona, Spain. Very choice sharp transparent to translucent large rhombic crystals to ½" in size intergrown all over matrix. Fine specimen for display, samples from this location are now scarce. 4x4x3", £68.00

36. **DOLOMITE.** Thorold, Ontario, Canada. Lustrous pale pinkish sharp saddle-shaped crystals thickly lining a 2½x2½x 1" cavity in limestone matrix with odd small chalcopyrite crystals scattered in places. 2½x2½x1", £7.00

37. **ENARGITE.** Quiruvilca, Libertad Dept., Peru. Sharp bright silvery-grey tabular crystals to 1 cm in length, intergrown on matrix with small sharp bright golden pyritohedral pyrites crystals. 2x½x1", £14.00

38. **FLUORITE.** Maloyushi Mine, Eyam, Derbyshire. Specimen A: Light yellow transparent sharp cubic crystals to ½" in size forming an intergrown group with a little bright brassy pyrites encrusting the crystals in places. 2½x2½x1", £11.00. Specimen B: Lustrous light golden-yellow transparent sharp cubic crystals to 4 mm in size intergrown and scattered on creamy calcite with a little light green duftite. 1½x1½x1", £7.00. Specimen C: As specimen B - 2½x2½x1", £4.75p

39. **FLUORITE.** Blackdene Mine, Weardale, Co. Durham. Intergrown group of large transparent to translucent sharp cubic crystals of an unusual sea-green to purple colour, and with a later partial encrustation of creamy crystallised calcite. Crystals range up to ½" in size. 5x4x2¼", £16.50p

40. **FLUORITE.** Naica, Chihuahua, Mexico. Select transparent octahedral crystals made up of complex crystals in parallel position, to ½" in size, implanted on matrix with well crystallised sphalerite, calcite and galena. 2½x2½x1", £16.00

41. **GALENA.** Baxter Springs, Cherokee Co., Kansas, U.S.A. Choice bright silvery-grey large composite cubic crystal with interesting deep etch patterns on it's faces. A little brown sphalerite and chert attached at the base. 2½x2½x2", £16.50p

42. **GEMELITE.** Island Magee, Co. Antrim, N. Ireland. Sharp lustrous creamy-white crystals richly lining cavities in vesicular basalt. 3x2½x1", £3.25p

43. **GOETHITE.** Restormel Royal Iron Mine, Lostwithiel, Cornwall. Rich deep brown radiated fibrous mass of the 'wood iron' variety, with part of the surface showing areas of small sharp shining crystals. 2½x2½x1", £4.50p

44. **GROSSULARITE variety HESSONITE.** Val d'Ala, Piedmont, Italy. Sharp lustrous bright orangey sharp crystals to 5 mm in size encrusting matrix with well crystallised creamy apatite and a little clinoholation. 2x1½x1½", £6.00

45. **HEMATITE variety KIDNEY ORE.** Florence Mine, Egremont, Cumberland. Choice lustrous dark reddish-brown botryoidal mass of good shape for display and free from bruises. 4½x3½x2½", £13.00
46. HEMINORPHITE. Royal Mine, Matlock Bath, Derbyshire. Sharp lustrous transparent crystals richly encrusting and scattered over cellular matrix. 2x1/4 x 1/2", £2.25p.

47. HORNBLENDE. Arendal, Aust-Agder "strict", Norway. Sharp lustrous blackish crystals to 15 mm in length partially embedded in crystalline hornblende/calcite matrix. 2 1/2 x 2 1/4", £4.50p.

48. HUEGNERITE, Pasto Bueno, Peru. Specimen A: Lustrous reddish-brown divergent sprays of elongated terminated crystals embedded in milky quartz, with the crystals protruding from one end and with lustrous Quartz crystals. 3 x 2 1/4", £23.00. Specimen B: Select lustrous reddish-brown single tabular crystals showing parallel growth, some with a little crystallised quartz attached. Each approx 1 1/2" long by 1/4" wide. £6.50p each.

49. HUTCHINSONITE. Dulceville, Libertad District, Peru. Specimen A: Lustrous deep red sharp elongated crystals to 4 mm in length scattered amongst bright orange transparent ORPIMENT crystals to 1 cm in size richly covering pyrite/argentite matrix. 1 1/4 x 1 1/4", £28.00. Specimen B: Sharp deep red elongated crystals to 3 mm in length scattered over matrix with a little well crystallised orangey orpiment. 1 1/4", £14.00.

50. ILVAITE. Rio Marina, Elba, Italy. Select lustrous black sharp terminated elongated crystals to 1/4" in length scattered over amphibole matrix with a little quartz. Fine old specimen. 3 1/2 x 2 x 1/4", £33.00.

51. JACOBITE. Langban, Värmland, Sweden. Bright black crystalline masses richly scattered in dolomite with thin reddish crusts of Litharge. 2 1/2 x 1 1/4", £13.00.

52. LEGRANDITE. Mina Ojuela, Mapimi, Durango, Mexico. Lustrous bright yellow sharp crystals to 1/4" in length scattered over cellular limonitic matrix with odd crystal masses of creamy smithsonite. 2 x 1/2 x 1/2", £13.00.

53. LINARITE. Blanchard Claim, Oingham, New Mexico, U.S.A. Specimen A: Bright blue sprays of crystals scattered on and encrusting galena with creamy crystallised Anglesite, on quartz/barytes vein tuff. 2 3/4 x 1 1/4", £4.50p. Specimen B: Bright blue radiating sprays of crystals lying on quartz. 1 1/4 x 1", £5.50p. Specimen C: Bright blue radiating crystal masses covering a 1 x 1" area on quartz vein tuff. 1 x 1", £3.25p.

54. MALACHITE. Shaba Province, Zaire. Choice cut and polished slice of well banded light and dark green malachite; attractive specimen for display. 4 x 3 1/4", £14.00.

55. MALACHITE. Bisbee, Cochise Co., Arizona, U.S.A. Small sharp deep green crystals forming a cellular mass with a little cuprite and Limonite. 2 1/2 x 2 1/4", £5.50p.

56. MARGASITE. Trece, Kansas, U.S.A. Bright brassy sharp spear-like crystals to 1 cm in size thickly intergrown all over matrix. 2 1/2 x 1 1/4", £6.50p.

57. MIMETITE. Mexico Mine, Calbeck Fells, Cumberland. Specimen A: Bright orangey curved barrel-shaped crystals to 5 mm in size richly encrusting quartz. 1 1/2 x 1 1/4", £6.50p. Specimen B: Lustrous greenish barrel-shaped crystals to 4 mm in size intergrown on a 1 1/4" area of quartzose matrix. 2 x 1", £3.25p.

58. NICCOITE. Dou Azzer, south of Ouarzazate, Anti-Atlas, Morocco. Very rich solid bronzy metallic mass with a little calcite and external alteration crusts of light green Annabergite. 3 x 2 1/2", £16.50p.

59. PERICLITE. St. Gotthard, Ticino, Switzerland. Lustrous creamy sharp terminated crystals to 1 cm in size richly encrusting schistose matrix with well formed Quartz crystals with Chlorite inclusions on one end. 3 1/2 x 1 1/4", £7.00.

60. PHARMACOSIDERITE. Wheal Garland, St. Day, Cornwall. Small light green sharp cubic crystals encrusting areas of cellular quartz gossan. 1 1/4 x 1 1/2", £5.50p.

61. PLANCHEITE. Mufulira Mine, Zambia. Rich light blue fibrous radiated crystalline mass with a little malachite. 2 x 1 1/4", £7.00.

62. PLATTNERITE. Mina Ojuela, Mapimi, Durango, Mexico. Specimen A: Small black needly crystals richly scattered on calcite covering limonitic gossan. 2 x 1 1/4", £4.50p. Specimen B: Small black needly crystals scattered on cellular limonitic gossan. 2 x 1 1/2", £2.50p. Specimen C: Small bright black needly crystals scattered on limonitic gossan with a little Calcite. 1 x 1", £1.50p.

63. PREHNITE. Bourg d'Oisans, Isere, France. Choice transparent to translucent sharp colourless to very pale green crystals to 1/4" in size thickly encrusting matrix, with the reverse side showing sharp prehnite crystals coated with Chlorite. Classic old specimen. 4 1/2 x 3 1/2 x 1 1/4", £54.00.
ACHITE. Old Gwindslake Mine, Gwindslake, Cornwall. Rich deep green masses infilling brecciated quartz veinstuff. 2½x2½x1½", £3.25p

65. PYRITES - Octahedral crystals. Quiruvilca, Libertad Dept., Peru. Fine bright brassy sharp octahedral crystals to nearly ½" in size thickly intergrown on matrix. Very well formed specimen showing unusually sharp crystals. 2½x2½x1"., £23.00

66. PYRITES. Levant Taf, Carinthia, Austria. Sharp bright brassy cubic crystals to 1 cm in size partially embedded and scattered in mica-schist. 4x3½x1½", £9.00

67. PYROCHLORIE. Sandefjord, Vestfold, Norway. Well formed light brown crystals to 3 mm in size embedded in orthoclase with albite and nepheline. 2x½", £1.75p

68. PYROMORPHITE. Braubach, Beu-Nassau, Germany. Cellular mass of light brown lustrous interlocking elongated hexagonal crystals to ½" in size. 2x1½", £6.50p

69. QUARTZ. Mt. Wellington Mine, Twelveheads, Cornwall. Slightly milky translucent elongated crystals to over ½" in length thickly covering matrix with numerous bright brassy striated cubic PYRITES crystals to ½" in size scattered over and amongst the quartz crystals. 4½x1½x1½", £11.00

70. QUARTZ. Ledbriggan Mine, Perrenzealuloe, Cornwall. A large single elongated well terminated milky crystal with a later deposit of minute sparkling quartz crystals on two sides, and with a little spheleelite around the base. 3½" long by 1½" across the axis. £6.50p

71. QUARTZ. variety Smokey Amethyst. Sonora, Mexico. A mostly transparent light amethystine and smoky coloured well terminated crystal, with a partial termination on the other end. 2½x1½x1½", £13.00

72. FLUOR-RIECHTERITE. Wilberforce, Ontario, Canada. Lustrous well formed olive to brown coloured tabular crystal sections to 1½" in size intergrown with calcite. 2½x1½x1½", £3.25p

73. RUTILE. Craig-r-Geillich, Killin, Perthshire, Scotland. Lustrous reddish-brown bladed masses in milky quartz. 2½x1½x1½", £2.75p

74. RUTILE. White Mountain Mine, Mono Co., California, U.S.A. Specimen A: Choice lustrous reddish-brown sharp twinned crystals to ½" in size partially embedded in pyrophyllite matrix. 1½x1½x1½", £13.00. Specimen B: Choice lustrous reddish-brown twinned crystal 1 cm in size partially embedded in Pyrophyllite, with numerous smaller crystals. 1½x1½x1½", £11.00. Specimen C: Select lustrous reddish-brown twinned single crystal, with most faces being complete. 1½x1½x1½", £7.00

75. SCHEelite. Zinnwald, Bohemia, C.S.S.R. Sharp lustrous light brown octahedral crystals to 5 mm in size scattered on dark slightly smoky quartz crystals with a little wolframite. 2½x1½x1½", £11.00

76. SHERWOODITE. Hemerdon Ball Wolfram Mine, Plymouth, Devon. Fine bright pale blue to olive-green sharp crystals to 3 mm in size richly lining cavities in quartz with a little lustrous brown Cassiterite. 2½x2½x1½", £6.00

77. SHERWOODITE. Wheal Pendarves, Camborne, Cornwall. Lustrous sparkling light olive-green crystals aggregated in clusters and lining a ½" cavity in arsenopyrite/tourmaline veinstuff, with crusts of scorodite lining other cavities. 2½x1½x1½", £4.50p

78. SELENITE. Red River, Winnipeg, Canada. A ball-like cluster of sharp translucent pale brown lustrous bladed crystals to ½" in size. 3½x2½x2½", £6.50p

79. SERPPIERITE. Serpieri Shaft, Laurion; Greece. Specimen A: Minute sky-blue crystals lining joints and small cavities in limonitic matrix with a little Azurite and green Cuproadamite. 2½x2½x1½", £4.50p. Specimen B: Minute sky-blue crystals lining small cavities in limonitic matrix, some pieces with Malachite, Azurite or Cuproadamite in association. Samples approx 1½x1½", £2.25p each.

80. SIDERITE. Wheal Jane, Pen, Cornwall. Lustrous light brown scalenohedral crystals to ½" in size lining cavities with quartz crystals in quartz/pyrites veinstuff. 2½x1½x1½", £2.75p

81. NATIVE SILVER. Sunshine Mine, Kellogg, Idaho, U.S.A. Bright silvery crystal fronds and small wires filling a ½" tube. £6.50p

82. SMALTITE. Wheal Herland, Gwineor, Cornwall. Very rich silvery-grey metallic mass with a little quartz and a small amount of Native Silver in an iron-stained ½" cavity on the surface of the sample. 3½x2½x1½", £13.00
83. SPHALERITE. Hydraulic Shaft, Smallcleugh Mine, Nenthead, Cumberland. Very choice bright black sharp crystals to 1 cm in size richly encrusting altered limestone matrix. Very attractive specimen for display. 7x3x2 1/2", £23.00

84. SPHALERITE. Aliva, Picos de Europa, near Santander, Spain. Lustrous gemmy transparent sherry coloured crystals to 1" in size intergrown on massive translucent orangey spheulelite. Specimens of this quality and transparency are now rare. 3x2x2 1/2", £54.00

85. STANNITE. Bunny Mine, near St. Austell, Cornwall. Metallic grayish masses on and in greisen with a little turquoise and muscovite mica. 2x2x1 1/4", £4.50p

86. STILBITE. Poona, near Bombay, India. Choice lustrous creamy sheaves of crystals to 2 1/2" in size forming an intergrown group with odd small creamy Heulandite crystals. Very showy specimen for display. 3x2x2 1/2", £14.00

87. TARUTTITE. Broken Hill, nr. Kabwe, Zambia. Specimen A: Small sharp sparkling crystals thickly encrusting both sides of cellular matrix with the upper surface partially encrusted with clear sharp HOPEITE crystals to 3 mm in size and whitish crusts of Hydrozincite. 2x1 1/2x1", £14.00. Specimen B: Small sharp sparkling crystals richly covering a banded botryoidal mass of Smithsonite. 2x1 1/2x1", £4.75p

88. TETRADYMITE. Carrock Mine, Carrock Fell, Cumberland. Bright silvery-grey metallic masses sparsely scattered in milky quartz. Specimen A: As specimen A, 1x1x1", £14.00. Specimen B: As specimen A, 1x1x1", £2.75p

89. TOBERNITE. Mine Bois-Noir, St. Priest-la-Prugne, Loire, France. Bright emerald green tabular crystals to 1" in size intergrown on areas of iron-stained altered granite. 2x1 1/4x1", £14.00

90. TOURMALINE variety SCHORL. Tongafeno, Madagascar. Sharp bright black crystals to nearly 1" in size intergrown on reddish granite. 1 1/2x1 1/2x1", £2.50p

91. VANADINITE. Mid-Blue, Atlas Mts., Morocco. Bright red sharp hexagonal crystals to 1 1/4" in size richly scattered over three sides of a light coloured matrix. 3x2 1/2x2", £14.00

92. WELLINGTONITE. Mine Bois-Noir, St. Priest-la-Prugne, Loire, France. Bright emerald green sharp tabular crystals to 1/2" in size intergrown on areas of iron-stained altered granite. 2x1 1/4x1", £14.00

93. WILLEMITE. Tsumeb, Otavi, S.W. Africa. Choice sharp transparent pale green to colourless crystals mostly around 2-3 mm in size completely covering a cellular matrix. Very rich specimen. 4x2x1", £12.00

94. WILLEMITE. Franklin, New Jersey, U.S.A. Rich light brownish crystalline masses associated with creamy Calcite. 3 1/2x2 1/2x1", £7.00

95. WITHERITE. Settlingstone Mine, near Hexham, Northumberland. Lustrous creamy well formed composite crystals forming ball-like aggregates to 1" in size on massive wetherite. 4x2x1", £11.00

96. WITHERITE. Nentsberry Mine, Alston Moor, Cumberland. A group of well formed pseudo-hexagonal crystals with a thin white barytes coating. Crystal faces to 1/2". 1 1/4x1x1", £1.50p

97. WOHLERITE. Risova, Lagesundsfjorden, Norway. Rich light brown masses associated with nepheline syenite and odd black plates of Lepidomelane. Specimen A: 2 1/2x2x1", £2.50p. Specimen B: 1 1/2x1x1", £1.25p

98. WULFENITE. Hingston Down, near Gunnislake, Cornwall. Bright black blades in arsenopyrite/quartz veinstuff. 3x2", £2.75p

99. WULFENITE. Los Lamentos, Chihuahua, Mexico. Bright orangey-blocky tabular crystals to 1/4" in size scattered on calcite matrix, and with a later encrustation of light brown crystals of ENDETITE. 4x2 1/2x1", £28.00

100. WULFENITE. 79 Mine, Gila Co., Arizona, U.S.A. Bright orangey-translucent tabular crystals to 8 mm in size scattered on light orangey botryoidal Mimetite covering gossan matrix. 3x2 1/2x1", £9.00
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

APRIL 1978.

1. ANATASE. Tysse, Norway. Select lustrous sharp dark indigo-blue crystals to over 4 mm in size scattered over intergrown Quartz crystals and crystal sections. 3x1\(\frac{1}{2}\)x1\(\frac{1}{2}\), £14.00

2. ANGLESITE. Cromford, nr. Matlock, Derbyshire. Fine sharp well formed creamy coloured crystals to \(\frac{1}{2}\)" in size intergrown on-bornite. 12x1\(\frac{1}{2}\)x1\(\frac{1}{2}\), £22.00

3. ARAGONITE. Molina de Aragon, Spain. A choice intergrown group of light purple shiny pseudo-trigonal crystals showing good terminations. Largest crystal shows faces 1\(\frac{1}{2}\)" in size. 2\(\frac{1}{2}\)x2x1\(\frac{1}{2}\), £8.00

4. ARSENOVRITE. Panasqueira, Beira-Baixa, Portugal. Fine bright silvery sharp crystals to 1" in size intergrown in parallel growth on intergrown arsenevrite. 3x2\(\frac{1}{2}\)x1\(\frac{1}{2}\), £13.00

5. ARTHURITE. Hingston Down Mine, nr. Callington, Cornwall. Rich apple green micro crystallised crusts on altered granite. Specimen A, 2x1\(\frac{1}{2}\)x1", £2.50p. Specimen B, 1\(\frac{1}{2}\)x1", £1.25p

6. AZURITE. Chessy, Rhone, France. Bright blue botryoidal crystalline mass with much bright green radiated MALACHITE in association. Very colourful specimen. 3x2\(\frac{1}{2}\)x2", £12.00

7. BARITES. Rosiclare, Hardin Co., Illinois, U.S.A. Transparent creamy coloured sharp tabular crystals to 1 cm in size, aggregated in sprays and thickly scattered all over a flat Calcite matrix, with the reverse side encrusted with sharp creamy Calcite crystals mostly around 6 mm in size. 6x3\(\frac{1}{2}\), £11.00

8. BARITES. Cleator Moor, Cumberland. Translucent creamy-grey well formed crystals to 1" in size intergrown on limonite matrix. 3x2\(\frac{1}{2}\)x1\(\frac{1}{2}\), £7.00

9. BAYLONITE. Wheal Carpenter, Guinever, Cornwall. Rich light green micro crystals and crystallised crusts covering milky quartz. Specimen A, 3x3\(\frac{1}{2}\)x1". £4.75p. Specimen B, 2x1\(\frac{1}{2}\), £3.25p. Specimen C, 1\(\frac{1}{2}\)x1", £2.25p.

10. BORNITE. Wheal Basset, Illogan, Cornwall. Solid purply metallic heavy mass with a slight greenish secondary alteration in places. 2\(\frac{1}{2}\)x2x1\(\frac{1}{2}\), £2.25p

11. BREUNERITE (Ferroan magnesite). Felber-Taunus, Styria, Austria. Light brown lustrous rhombic crystals to 1 cm in size scattered in schistose matrix. 3x1\(\frac{1}{2}\)x1\(\frac{1}{2}\), £4.50p

12. BROOKITE. Hot Springs, Garland Co., Arkansas, U.S.A. Fine bright black sharp crystals to 5 mm in size scattered over a large section of a smoky quartz crystal, with smaller crystals attached. 3\(\frac{1}{2}\)x2x1\(\frac{1}{2}\), £18.00
13. CARBERITE (Magnesian Annabergite). Laurium, Attica district, Greece. Light green small sharp crystals lining small cavities in calcite/limonite matrix. 2x1½x1", £3.75p.

14. CALCITE. St. Andreasberg, Harz, Germany. Specimen A: Select translucent to transparent hexagonal flat terminated crystals to 1" in length intergrown and scattered on cellular calcite/galena matrix. 3½x2½x2", £11.00. Specimen B: Translucent creamy coloured pseudo-hexagonal crystals with flat terminations stacked one-upon-another on matrix. Largest crystal is 1" in diameter. 2½x2½x1½", £8.00.

15. CALCITE. Porthoustock Qry., Lizard, Cornwall. A large geode-like cavity in calcite/altered gabbro matrix lined with transparent creamy coloured well formed modified crystals mostly around 1 cm in size. Some of the crystals have reddish hematite inclusions, and the reverse side of the specimen shows larger translucent crystals to ½" in size. Overall size 5x4½x2", size of cavity 3½x2½", £6.50p.

17. CASSITERITE. Seal Hole Mine, St. Agnes, Cornwall. Bright deep brownish sharp crystals to ⅛" in size intergrown on massive cassiterite matrix with a little Topaz in association. 1½x1½x1½", £12.00.

18. CASSITERITE. Blue Hills Mine, St. Agnes, Cornwall. Rich heavy light brown mass with minor veinstuffs attached. Old label attached states that it was collected in 1910. 2½x1½x1½", £2.75p.

19. CASSITERITE, Panasqueira, Beira-Beixa, Portugal. Select lustrous blackish sharp twinned crystals approx ½x⅛" in size implanted on crystallised muscovite matrix. Samples each approx ½x½", £1.50p each.

20. CELESTITE. Vate, nr. Bristol, Gloucestershire. Large translucent pale bluish sharp terminated crystals to over 1" in size intergrown on matrix. 2½x2½x2½", £3.75p.

21. CERUSSITE. Redgill Mine, Caldbeck, Cumberland. Lustrous creamy-white 'Jackstraw' crystals intergrown on a 3½x4½" area on quartz/galena matrix. 2½x1½x1½", £1.50p.

22. CERUSSITE. Broken Hill, N.S. Wales, Australia. Lustrous creamy elongated crystals in parallel growth forming pure groups. Each approx 1½" long by ⅛", £2.25p each.

23. CHABAZITE. Parkgate Qry., Co. Antrim, N. Ireland. Lustrous creamy sharp rhombic crystals to 5 mm in size thickly lining a 1½x1½" cavity in basalt matrix. 2¼x2½x1½", £2.75p.

24. CHALCOPYRITE var. BLISTER COPPER. Select well formed botryoidal masses thickly covering a chalcopyrite/bornite/quartz/chlorite matrix, with each individual botryoidal mass invested with tarnished micro crystals of BORNITE. An interesting and unusual specimen, 3x2½x1½", £23.00. (Dolcoath Mine, Camborne, Cornwall)

32. **CORNETITE.** Ovua Mkuba, Ndola, Zambia. Select sparkling deep blue sharp micro crystals richly scattered over matrix. Specimen A, 3½x2½x1", £11.00. Specimen B, 2½x2½x1", £7.00. Specimen C, 2½x1½", £4.50p. Specimen D, with the micro crystals scattered on one side of a pure mass of bright green banded Malachite. 1½x1½", £3.50p.

33. **CROCOITE.** Bwana Mkuba, Ndola, Zambia. Select sparkling deep blue sharp micro crystals richly scattered over matrix. Specimen A, 3½x2½x1", £11.00. Specimen B, 2½x2½x1", £7.00. Specimen C, 2½x1½", £4.50p. Specimen D, with the micro crystals scattered on one side of a pure mass of bright green banded Malachite. 1½x1½", £3.50p.

34. **CROSTEDTITE.** Wheal Jane, Kea, Cornwall. Specimen A, Choice lustrous blackish small very sharp crystals thickly covering botryoidal masses of Siderite with a little Pyrites and quartz on quartz veinstuff. 3½x1½", £13.00. Specimen B, Bright blackish small sharp crystals scattered and infilling cavities in pyrites/quartz matrix with odd cleavages of Wisselite in places. 3x2½x2", £5.50p.

35. **CUPRITE.** Wheal Unity, Gwennap, Cornwall. Sharp dark maroon coloured octahedral crystals to 5 mm in size scattered on and in cavities in cellular quartzose veinstuff. 2½x1½x1", £11.00.

36. **CUPRITE var: TILE ORE.** Wheal Unity, Gwennap, Cornwall. Rich dark reddish masses associated with much light brownish MELACONITE and with a partial surface alteration to light greenish Malachite. 3x2½x1", £4.50p.

37. **EMELITE.** Broken Hill, N.S. Wales, Australia. Specimen A: Minute sharp olive green crystals scattered on blackish psilomelane matrix with much creamy crystalline Siderite. 2½x2½x1", £3.50p. Specimen B, Minute olive green sharp crystals scattered over slightly cellular light brown limonitic matrix. 1½x1½x1", £2.50p.

38. **EPIDOTITE, variety Pisticite.** Near Genoa, Italy. Lustrous dark olive green sharp crystals to 4 mm in size thickly covering matrix. 2½x1½", £3.25p.

40. **FLUORITE.** Groversake Mine, near Rookhope, Co. Durham. A large light greenish modified cubic crystal 1½x1" in size associated with smaller crystals on matrix, all frosted with minute sparkling clear Quartz crystals. 1½x1½", £8.00.

41. **FLUORITE.** Trevaunance Mine, St. Agnes, Cornwall. Select golden large platy crystal masses associated with quartz and a little tourmaline. 2½x2½x2", £9.00.

42. **FLUORITE.** Boltsburn Mine, Rookhope, Co. Durham. A clear light purplish well formed inter-pentrant twinned crystal. 1½x1", £1.25p.

43. **GALENA.** Clausthal, Harz, Germany. Select modified sharp bright crystals to over 1 cm in size richly scattered over siderite matrix, with a later partial encrustation of small sharp creamy Dolomite crystals. 4½x2½", £8.00.

44. **GALENA.** Naica, Chihuahua, Mexico. Very bright silvery-grey sharp modified crystals to over 1½" in size forming a cellular crystal mass with small bright brassy Pyrites crystals and a little creamy Calcite. 2½x2½x2", £3.00.

45. **GILBERTITE.** Hensbarrow Moor, Cornwall. Select golden large platy crystal masses associated with quartz and a little tourmaline. 2x2½x1", £1.50p.

46. **GOETHITE.** Botallack Mine, St. Just, Cornwall. Small sharp sparkling blackish crystals thickly lining large cavities in cellular reddish hematite matrix. 3x2½x1½", £6.50p.

47. **GOSLARITE.** Goslar, Harz, Germany. Select creamy to light brown cellular masses showing needly crystals in cavities. Specimen A, 3½x3x1½", £5.50p. Specimen B, 3x1½x1½", £4.50p. Specimen C, 2x2½x1", £3.25p.
48. HANKSITE. Searles Lake, Inyo Co., California, U.S.A. Well formed terminated creamy coloured translucent single crystal. 1"x1½x1", £1.50p

49. HEMATITE. Rio Marina, Isle of Elba, Italy. Fine bright black sharp crystals, some with a slight iridescent tarnish, to over ½" in size, thickly intergrown and completely covering matrix. Fine specimen for display. 5x3½x1½", £23.00

50. HEMIMORPHITE. Santa Eulalia, Chihuahua, Mexico. Fine transparent sharp terminated crystals and crystal sprays to 1 cm in size richly scattered all over cellular limonitic matrix. 4½x3½x1½", £11.00

51. HORNBLende. Arendal, Aust-Agder, Norway. Select group of blackish large well formed crystals to 1½" in size with odd lustrous orange-brown elongated sections of APATITE crystals in association. 3½x2½x½", £8.00

52. IODVITE. Broken Hill, N.S. Wales, Australia. Minute pale yellow sharp crystals scattered on a 1½" area on dense limonite/cerussite matrix. 2½x2½x½", £5.50p

53. KASOLITE. Mine la Faye, Grury, Saone-et-Loire, France. Light yellow micro crystals richly scattered on and in limonitic matrix. 2½x2½x½", £2.25p

54. NATIVE LEAD. Langban, Värmland, Sweden. Specimen A: Rich dull greyish thin plates and masses on and in manganophyllite matrix with minor reddish areas of Litharge. 1½x1½", £16.50p. Specimen B: Thin hackly masses and plates on manganophyllite, 1½x1½", £1.25p

55. LEPIDOLITE. Minas Gerais, Brazil. Well formed lavender coloured crystals to 5 mm in size scattered on a 1½" area on creamy cleavages of Albite variety Cleavelandite. 2½x2½", £2.25p

56. LITHIENITE. Nchanga Mine, Zambia. Specimen A: Rich crust of bright dark olive-green sharp crystals to 3 mm in size covering matrix. 3x2½x1½", £15.50p. Specimen B: As specimen A, with the crystals to 4 mm in size. 4½x2½", £9.00

57. MAGNETOPHOLMITE. Langban, Värmland, Sweden. Rich blackish masses scattered in brown manganophyllite matrix. 2½x1½x½", £2.75p

58. MALACHITE. Shaba Province, Zaire. Select beautifully banded dark to light green well polished slices. Specimen A: 5½"x1½", £14.00. Specimen B: 3½x2½", £11.00

59. MALACHITE. Apex Mine, Utah, U.S.A. Light green botryoidal mass with a little light blue botryoidal crystalline Azurite in association. Colourful specimen. 4½x2½x1½", £6.50p

60. MALACHITE. Mina Ojuela, Durango, Mexico. Light green silky velvety crystals richly lining large cavities in brown limonitic matrix, with a little Calcite in places. 2½x2½x2½", £3.50p

61. MARCASITE. Joplin, Missouri, U.S.A. Light brassy coloured sharp axe-like crystals to 1½" in size thickly covering matrix with a little Calcite in association. 4½x2½", £8.00

62. MESOLITE. Gable, Oregon, U.S.A. Creamy white radiated neatly crystal masses to over 1½" in diameter implanted on creamy well formed Heulandite crystals lining a large cavity in cellular matrix. 3x2x2", £5.50p

63. NEPHELINE. Mta. Somma, Vesuvius, Italy. Fine sharp transparent to translucent clear creamy coloured crystals richly scattered over matrix. All the specimens have other minerals in association. Specimen A, 4½x3x1½", with crystals to 4 mm in size, £6.50p. Specimen B, 3½x2½x½", with crystals to 3 mm in size, £5.50p. Specimen C, 3½x2½", with crystals to 4 mm in size, £4.50p

64. OLIVENITE. Wheel Unity, Guernop, Cornwall. Light olive-green silky crystal masses aggregated on a large milky pyramidal Quartz crystal. 2½x2½x1½", £5.50p

65. PERICLINE. St. Gotthard, Ticino, Switzerland. Fine lustrous creamy-white sharp crystals to 1 cm in size thickly scattered all over schistose matrix, with odd well formed Quartz crystals with chlorite inclusions on one side. 3½x2½x2½", £7.00

66. PHILLIPSITE. Vallero, nr. Rome, Italy. Transparent glassy crystal sprays to 4 mm in size richly scattered over matrix. 3½", £3.25p

67. PLANCHEITE. Mufulira Mine, Zambia. Specimen A: Very rich light blue fibrous-radiated masses with a little greenish Malachite densely covering a 3½x2½" area on matrix. 4½x3½", £14.00. Specimen B: Rich light blue fibrous crystalline mass associated with quartz. 2x2½x1½", £8.00
59. PREHNITE. Bourg d’Oisans, Isere, France. Select light greenish rounded crystals and crystal masses to ¼ in diameter scattered on matrix. 3½ x 1½", £5.50p

60. PREHNITE. Boylestone Quarry, Barrhead, Scotland. Lustrous silky translucent lime-green botryoidal crystalline masses covering basalt matrix. 3 x 2½", £2.50p

61. PYRITES. Wheal Jane, Ken, Cornwall. Small bright brassy modified octahedral crystals to 4 mm in size richly scattered over and amongst elongated clear QUARTZ crystals to ½ in length covering matrix. 4 x 3 x 1½", £5.50p

62. PYRITES. Soria, Spain. Fine very sharp and bright single cubic crystals, mostly completely perfect. Each approx. ½ x ½", £2.25p each.

64. PYROMORPHITE. Mine les Farges, Creuse, France. Fine lustrous olive-green sharp hexagonal crystals to 5 mm in size scattered over iron stained creamy crystallised Barite matrix. 2 x 1½ x 1½", £11.00

65. QUARTZ replacing BARYTES. Kapnik, Humaia. Thin tabular Barite crystals to ½ in size completely replaced by drusy Quartz and scattered on small sharp quartz crystals covering matrix. 3 x 2", £4.50p

66. QUARTZ, Mt. Wellington Mine, Twelvemoor, Cornwall. Specimen A: Sharp terminated creamy crystals to 1½ in size forming a plate-like group, with minute bright brassy crystals of PYRITES covering parts of the crystals. Fine specimen for display. 5½ x 4½", £9.00. Specimen B: As specimen A, with the quartz crystals to 2½ in size, 3½ x 3", £4.75p. Specimen C: Large milky well formed terminated crystals to over 1½ in size forming an intergrown group with a little Pyrites dusted on one side. 2½ x 2½", £2.50p

67. RHODOCHROSITE. Kassandra, Chalkidiki, Greece. Fine large light pink sharp rhombic crystals to over 1½ in face edge intergrown on rhodochrosite/pyrites matrix. All the crystals are encrusted with minute sparkling Quartz crystals. Fine display specimen. 5½ x 3 x 1½", £44.00

68. SCHELZITE. Devon Friendship Mine, Marytavy, Devon. Rich pale creamy-yellow masses on and in milky quartz with a little silvery arsenopyrite. 2½ x 2½ x 1½", £4.50p

69. SCHELZITE. Reaphook Hill, Flinders Range, S. Australia. Fine well formed creamy elongated needly crystals to 1 cm in length richly covering large areas of light brown limonitic matrix. 2½ x 1½ x 1½", £7.00

70. SCORODITE. Prince of Wales Mine, nr. Callington, Cornwall. Fine bright light greenish small sharp crystals richly covering large areas of altered slate matrix. These are very rich specimens for this location. Specimen A: 3½ x 2½ x 1½", £9.00. Specimen B, with the crystals on milky quartz, 3 x 2½ x 1½", £6.50p. Specimen C, with the crystals lining a ½ x 1½ cavity in matrix, 2½ x 1½ x 1½", £3.25p. Specimen D, As specimen A, 2 x 1½ x 1½", £2.50p

71. SCORODITE. Hemerdon Bell Wofram Openworks, Plympton, Devon. Specimen A: Light greenish sharp crystals to 2 mm in size thickly lining large cavities in milky quartz. 2¼ x 1½ x 1½", £9.00. Specimen B, Pale bluish-green lustrous sharp crystals to 4 mm in size scattered on and lining cavities in milky quartz. 2½ x 2½", £6.50p. Specimen C, Bright light blue sharp crystals to 3 mm in size lining cavities in milky quartz. 1½ x 1½", £4.50p

72. SIDERITE. Morro Velho goldmine, Minas Gerais, Brazil. Large lustrous light brown sharp crystals to nearly 1½ in size intergrown on matrix with add small brassy Pyritohedral crystals. 2½ x 1½ x 1½", £4.50p

73. NAIW SILVER. Cobalt, Ontario, Canada. Fine slightly tarnished silverly large hackly sheets associated with a little creamy calcite. Very rich and showy specimen from this famous old mining camp. 4 x 1½ x 1½", £38.00

74. SMITHSONITE. Tsumeb, Otavi, S.W. Africa. Fine lime-green coloured sharp transparent rhombic crystals to 5 mm in size thickly scattered in a 2¼ x 1½ cavity on one side of chalcocite/smithsonite matrix. 4 x 3 x 1½", £33.00
84. SMITHSONITE replacing CALCITE. Mendip Hills, Somerset. Choice creamy coloured
dog-tooth Calcite crystals to ½" in size intergrown on cellular matrix and
completely replaced by Smithsonite. Interesting pseudomorph with the replacement
of the crystals being unusually sharp. Specimen A, 3½x2¼", £4.75p. Specimen B,
2x1¼", £3.50p.

85. SPHALERITE. Wheal Jane, Pen, Cornwall. Large bright black polysynthetic twinned
crystals to over ½" in size scattered on matrix with elongated light greenish
Quartz crystals and a little Pyrites in association. 2½x2x1", £4.50p.

86. STILBITE. Trummorry, Co. Antrim, N. Ireland. Sharp creamy-white crystals to 1 cm in
size richly encrusting basalt matrix. 3x2½x1¼", £3.50p.

87. TARSUTITE. Broken Hill, Zambia. Specimen A: Sparkling sharp clear crystals to 3 mm in
size richly scattered on brown limonitic matrix with odd elongated creamy crystals of Phosphophyllite in places. 3½x1½x1½", £15.50p. Specimen B,
Bright colourless to creamy sharp crystals to 3 mm in size very richly scattered
over limonitic matrix. 2½x2x1¼", £7.75p. Specimen C, Bright colourless transparent
crystals to 3 mm in size lining cavities in limonitic matrix. 1½x1½", £3.25p.

88. TETRADYMITE. Carrock Mine, Caldbeck, Cumberland. Rich bright silvery-grey metallic
Specimen B, 1½x1", £2.50p.

89. TETRAHEDRITE. Kapnik, Rumania. Specimen A: Bright silvery grey sharp crystals to 7 mm
in size richly covering large areas of matrix with milky quartz crystals and a
little creamy Calcite in association. 4x2", £11.00. Specimen B, Bright silvery-grey
sharp crystals to 7 mm in size intergrown on matrix with a little Quartz and
Pyrites crystals. 1½x1", £6.50p.

90. TORBERNITE. South Terras Mine, St. Stephens, Cornwall. Light green small well formed
tabular crystals lining cavities in matrix. 1½x1½x1¼", £3.25p.

91. VALENCIANITE (Variety of Adularia). Valenciana Mine, Guanajuato, Mexico. Sharp lustrous
creamy coloured crystals to 1 cm in size thickly covering matrix with small light
brown Siderite crystals in association. 3x1½x1½", £5.50p.

92. VALENTINITE. Pribram, Bohemia, C.S.S.R. Lustrous creamy coloured platy crystals and
crystal rosettes to 5 mm in size, richly scattered over matrix with odd small greyish
Stibnite crystals in association. 3½x2x1½", £22.00.

crystals richly scattered over creamy 'coxcomb' Barytes crystals covering matrix.
Attractive sample for display. 3x2½", £8.00.

94. VARISCITE. Highdown Ory., Filleigh, Devon. Specimen A, Pale green slightly botryoidal
crystals and globular masses scattered on both sides of brocaded slate matrix.
2½x1½x1½", £4.50p. Specimen B, As specimen A, 1½x1½x1½", £2.50p. Highdown Quarry
was the first British occurrence of Variscite, these specimens are somewhat better
than the material that was found originally.

95. WOLFRAMITE. Hingston Down, nr. Gunnislake, Cornwall. Rich bright black blades and
masses in milky quartz with a little silvery arsenopyrite. Specimen A, 3½x2x1½",

ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

MAY 1978

1. ADAMITE. Mina Ojuela, Mapimi, Durango, Mexico. Fine lustrous yellowy-green sprays of sharp terminated crystals to 1/2" intergrown and scattered over limonitic matrix. 2½x2½x1½", £9.00

2. ALBITE. Rauris, nr. Salzburg, Austria. Lustrous sharp creamy crystals to 8 mm in size thickly lining a 2x1" cavity in matrix with silky AMANTHUS. 3x2½x1½", £6.50p

3. ANATASE. St. Gotthard, Ticino, Switzerland. Sharp deep bluish crystals to 4 mm in size scattered over matrix with small Quartz crystals. 2x1½", £9.00

4. ANGLESITE. Monte Poni, Iglesias, Sardinia. Fine large sharp colourless crystals to 1½" in size lining a 2x1" cavity in Galena matrix with other Anglesite crystals scattered in places. 3½x2½x1½", £38.00

5. APATITE. Panasqueira, Beira-Beixa, Portugal. Fine translucent light green sharp hexagonal crystals to ½" in size scattered on and partially embedded in a group of large mostly clear well terminated QUARTZ crystals, the largest being 4" long by 2" across the axis. There are also several sharp light green Apatite crystals enclosed in the Quartz crystals making interesting phantoms. A little drusy pale brown Siderite encrusts the sides of the Quartz crystals in places. Fine specimen for display. 5x2½x4" high. £115.00

6. APOPHYLLITE. Catcairn, Co. Antrim, N. Ireland. A sharp transparent doubly terminated crystal 2½½" implanted on matrix with creamy white Gyrolite and Okenite, 2x1½", £2.75p

7. ARAGONITE. Tazoula, near Sefrou, Morocco. Specimen A: Select ball-like mass of sharp translucent intergrown hexagonal orangy-red crystals to 1 cm in size. 2½x1½", £3.25p. Specimen B: Select ball-like clusters of sharp hexagonal crystals to ½" in size. Each approx 4x1", £1.25p each.

8. ARDENNITE. Saln-Chateau, Ardennes, Belgium. Rich golden radiated crystalline masses embedded in milky Quartz. Specimen A: 2x2x1", £4.50p. Specimen B: 1½x1½x1", £2.75p

9. ARSENOPYRITE. Trepca, Yugoslavia. Fine bright silvery sharp crystals to 1 cm in size associated with elongated milky QUARTZ crystals to 2½" in length, sharp translucent CALCITE crystals to ½" in size, and a little blackish Sphalerite. Very attractive specimen. 3½x2½x1½", £18.00

10. AZURITE. Copper Queen Mine, Bisbee, Arizona, U.S.A. Select bright blue radiated ball-like crystal groups intergrown and scattered over cellular light green Malachite. Individual crystal groups range in size up to ½". 4x1¼x1½", £23.00
1. BARYTES. Settlingstones Mine, Hexham, Northumberland. Choice lustrous creamy sharp wedge shaped crystals to ½" in size completely covering and free-standing on matrix. 4x3x½", £13.00.

2. BERYL Var. AQUAMARINE. Teofilo Otoni, Minas Gerais, Brazil. Specimen A: Select fine pale blue sharp terminated elongated hexagonal crystals being mostly transparent. Crystals each approx 1½" long by 1 cm across the axis, £4.50p each. Specimen B: As specimen A, crystals each approx 1½" long by 1 cm across the axis, £2.75p each.

3. BIXBYITE. Thomas Mts., Utah, U.S.A. Choice sharp blackish cubic crystal 5x5 mm in size implanted on matrix x25x13 mm. £6.50p.

4. CALCITE. Tsumeb, Otavi, S.W. Africa. An interesting group of translucent creamy sharp rhombic crystals to ½" on face edge, with inclusions of light green DUFTITE. 2x1½", £6.50p.

5. CASSITERITE. Wheal Maudlin, Lanlivery, Cornwall. Bright black sharp twinned crystals to 4 mm in size richly scattered over chloritised altered slate matrix. 2½x2x1½", £13.00.

7. CASSITERITE. Zinnwald, S. S. R. A fine very large lustrous deep brown sharp twinned crystal. 1⅔x1⅔x1", £27.50p.

10. CHALCOCITE. Levant Mine, Pendeen, Cornwall. Very fine bright silvery-grey sharp crystals to 5 mm in size richly intergrown and scattered on cellular hematite/quartz veinstuf. 2x1", £23.00.

11. CHALCOPYRITE. Baxter Springs, Cherokee Co., Kansas, U.S.A. Fine bright golden sharp crystals to 5 mm in size richly scattered in orientated growth on intergrown large lustrous brownish SPHALERITE crystals. Specimen A: 3½x2½x1½", £8.00. Specimen B: 2½x2x1", £4.50p.

12. CHALCOPYRITE var. BLISTER COPPER. East Pool Mine, Illogan, Cornwall. Bright dark golden botryoidal mass covering hematite/chalcopyrite veinstuf. 2x1½x1", £3.50p.

13. CHILDRENITE. George & Charlotte Mine, nr. Tavistock, Devon. Very choice bright golden transparent crystals to 2 mm in size richly scattered over light brown Siderite crystals on quartz/pyrites matrix. 1½x1½x1½", £8.00.

14. COLEMANITE. Boron, California, U.S.A. Fine bright creamy transparent sharp spear-like crystals to ½" in size richly etching matrix with creamy Calcite covering one side. 2½x2x2½", £6.50.

15. CUPRITE. Silver Valley Mine, Linkinhorne, Cornwall. Very rich cellular metallic bright crystalline mass with much deep reddish crystallised DUFRITE and a little quartz in association. 3x2½x1½", £8.00.

17. CROCOITE. Kepi Mine, Dundas, Tasmania, Australia. Select bright orangey sharp terminated crystals to 4 mm in length scattered in cavities in limonitic matrix with small bright green PYROMORPHITE crystals. 3x1½x1½", £5.50p.

19. CUPRITE. Tauneh, Otavi, S.W. Africa. Fine bright red sharp complex crystals to 3 mm in size richly scattered over matrix with a little crystallised creamy Calcite. 3x2½x1½", £8.00.
31. DIAMOND. Transvaal, South Africa. Select single sharp octahedral single crystals of a creamy to colourless or slightly smoky or yellow colour. Most show interesting growth patterns on their faces, and some crystals show twinning and various crystal modifications. Crystals are priced for perfection and size. Specimen A, 2.23 carats, 2×2×1 in size, £33.00. Specimen B, 1.79 cts, 1⅛ in size, £22.00. Specimen C, 1.46 cts, 1⅛ in size, £17.00. Specimen D, 0.97 cts, 5 mm in size, £13.00. Specimen E, 0.24 cts, 5 mm in size, £8.00. Specimen F, 0.30 cts, 4 mm in size, £7.00.

32. DAWSONITE. Francan Qry., Montreal, Quebec, Canada. Small glassy needly crystals scattered on and associated with light purple fluorite on matrix. 2×2×1, £5.50.

33. DIGENITE. Leonard Mine, Butte, Montana, U.S.A. Very rich bright bluish tarnished metallic mass with a little golden pyrites. 3×2½, £5.00.

34. DIOPTASE. Minouli, Niari river, Zaire. Bright emerald green sharp crystals to 1 in size thickly lining a 1½ in cavity in massive dioptase. 2½×1¼, £19.00.

35. DUFTITE. Tsumeb, Otavi, S.W. Africa. Light green rich crystalline crusts and masses covering platy Wulfenite crystals with a little drusy Calcite. 1½×1½×1, £6.00.

36. ENARGITE. Butte, Montana, U.S.A. Fine sharp metallic grey terminated tabular crystals to over 1 cm in size very richly scattered over both sides of a cellular quartz/pyrite matrix, with odd sharp milky Quartz crystals and modified Pyrite crystals in places. 3×3×3, £23.00.

37. ERYTHRITE. Bou Azzer, Djebel Sarhro, Morocco. Lustrous raspberry-red well formed tabular crystals and crystal sections to 1 in size intergrown on a ½ in area on Skutterudite. 1×1½, £14.00.

38. FLUORITE. Blackdene Mine, Weardale, Co. Durham. Choice transparent sea-green coloured cubic crystals to nearly 1 in size forming an intergrown group with a little lustrous creamy crystallised Calcite deposited on some of the crystals. 3×2½×1¼, £16.50.

39. FLUORITE. Hilton Mine, Scordale, Westmoreland. Specimen A: Select light yellow sharp mostly clear intergrown cubic crystals to 1 cm in size thickly covering matrix. 3¾×3×1¼, £7.00. Specimen B, Fine transparent bright yellow twinned single cubic crystal with inclusions of brassy Chalcopyrite. Overall size 1½×1½×1, £4.50.

41. GALEVA. Baxter Springs, Cherokee Co., Kansas, U.S.A. Specimen A: Fine group of large bright silvery-grey metallic intergrown cubic crystals to 3 in size. All the faces of the crystals show excellent deep growth and etch patterns. Fine specimen for display. 5½×5×2½, £38.00. Specimen B: Choice modified bright metallic cubic crystal showing interesting growth patterns and some parallel growth of the crystal faces. Minor sphalerite attached. 3×2½×2¾, £16.50. Specimen C, Fine sharp bright cubic crystals to over 2 in size scattered on matrix. 3×2¾, £8.00.

42. GROSSULAR GARNET. Lake Jacc, Chihuahua, Mexico. Specimen A: Select lustrous sharp creamy-pink crystal 2×1½ with another 1½×1½ attached. Overall size 3×2½×1½, £7.00. Specimen B: Fine sharp pinkish single crystal, 1½×1½×1½, £4.50.

43. GROSSULAR GARNET var. HESSONITE. Vald`Ala, Piedmont, Italy. Specimen A: Fine bright orangey-red sharp crystals to 4 mm in size scattered over matrix with a little Clinochlore and Apatite. 2×2, £11.00. Specimen B: Bright orangey-red small sharp crystals encrusting matrix with a little creamy Apatite. 2½×2, £4.50.

44. HEMATITE. var. KIDNEY ORE. Florence Mine, Egremont, Cumberland. Fine bright reddish-brown botryoidal mass with a partial overlay of bright black small platy SPECULARITE crystals. Attractive display specimen. 5×2½×2½, £9.00.

45. HUREULITE. Tip Top Mine, Black Hills, S. Dakota, U.S.A. Select light rose-coloured sharp transparent crystals to 4 mm in size scattered in cavities in crystalline greenish Triphylite matrix with well crystallised LEUCOPHOSPHITE, VIVIANITE and Rockbridgeite. 2½×2½×1½, £30.00.

47. IDocrase. Lake Joco, Chihuahua, Mexico. Specimen A: Choice lustrous intergrown group of well formed terminated yellowish crystals, the largest being ½" on face edge. 2½x2¼", £8.00. Specimen B: A select single well terminated sharp yellowish crystal. 1½x1½", £3.50p

48. ILMenite. Niederhoflieden, Hessen, Germany. Lustrous blackish platy crystals and crystal sections intergrown and scattered in matrix with Chalcocite and Thomsonite. 2½x1¼", £2.50p

49. ISO-stAmanite. Cigga Mine, Fennanazulaua, Cornwall. Very rich tarnished metallic grey mass with a little silvery Arsenopyrite. 2x2¼", £2.75p

50. JAMESOnite. Badenoom Mine, nr. Port Isaac, Cornwall. Rich silvery-gray metallic fibrous crystalline masses in milky quartz with a little yellowish Andesinite. 3x2½", £5.50p

51. LIBETHENEITE. Miguel Varela Mine, Alentejo, Portugal. Sharp bright olive-green octahedral crystals to 2 mm in size very richly scattered over matrix. 3x2½", £11.00

52. MaGnetite. Nordmark, Wismund, Sweden. Sharp blackish octahedral crystals to 5 mm in size richly covering matrix. 1½x1½", £4.50p

53. MALACHite. Swane Mkuba, Noela, Zambia. Select bright green tubose and botryoidal mass thickly covering matrix. Very interesting shape and form. 3x2½", £9.00

54. MALAYAite. Melton, Dartmoor, Devon. Rich pale yellow waxey masses scattered in creamy white wollastonite hornfels. 2½x1¼x1½", £5.50p

55. MARGAsite. Baxter Springs, Cherokee Co., Kansas, U.S.A. A very fine group of large sharp brassy spear-like intergrown crystals to over ½" in size. There is a little orangey-brown Sphalerite on the back of the specimen. 3½x1¼", £14.00

56. MARGAsite. Shakespeare Cliff, Folkstone, Kent. Select light brassy sharp intergrown groups of twinned spear-like crystals. Crystals vary in size from ½ to ¾", and the specimens are priced from £2.50p to £4.50p each according to quality. Pieces range from ½x½" to 1x1".

57. MIMETite. Tsumeb, Otavi, S.W. Africa. Specimen A: Fine transparent sharp elongated tapering hexagonal crystals of a bright yellowy colour to 1 cm in length, very richly scattered on a cellular matrix. 1½x1¼x1½", £13.00. Specimen B: Fine bright orangey-yellow tapering crystals to 8 mm in size forming an attractive intergrown group with a little creamy calcite. 1½x1½", £6.50p

58. MIMETite var. CAMPyLITE. Drygill Mine, Caldbeck, Cumberland. Unusual lustrous orange-yellow solid crystalline mass with the upper surface showing good barrel shaped crystals to over ½" in size. A little bladed barytes in places. 2½x1¼x1½", £6.50p

59. MIMETite. Drigguth Mine, Caldbeck, Cumberland. Fine light green barrel shaped crystals to 3 mm in size thickly encrusting milky quartz matrix. Specimen A: 3x2½x1½", £4.50p. Specimen B: 2x2½x1½", £3.50p. Specimen C: 2½x1", £2.25p

60. MOLYbDENite. Kingsgate, N.S. Wales, Australia. Rich metallic grey platy crystalline masses associated with milky quartz. 2½x1½x1½", £2.50p

61. OLIVEnite. Tsumeb, Otavi, S.W. Africa. Small sharp olive-green crystals richly covering matrix. 1½x1", £2.25p

62. PEctOLite. High Force Fory., Teesdale, Co. Durham. Select creamy-white fibrous radiated vein section. 2½ by ½" thick. £2.25p

63. PHARMACOSIDERITE. Uheel Ordland, St. Day, Cornwall. Lustrous green sharp cubic crystals to 3 mm in size lining cavities in irony matrix. 2½x1½x1", £4.50p

64. PREHNite epimorph after LAUMONTite. Poona, nr. Bombay, India. Select pale greenish small well formed crystals forming casts after elongated laumontite crystals. Specimens each approx 1" in size, £1.25p each.

65. PSEUDOMALACHite. Coumbing Mine, Qarcoar, N.S. Wales, Australia. Rich deep green slightly botryoidal thick masses covering irony matrix. 2½x2½x1½", £3.50p
66. PYRITES. Govorrano Mine, Tuscany, Italy. Choice bright golden, sharp cubic crystals to 1" in size forming a fine intergrown crystal group. Fine specimen for display. 4x4x1 1/2", £27.00

67. PYRITES. Carn Brea Mine, Illogan, Cornwall. Small sharp brassy octahedral crystals richly covering pale brown crystallised Siderite on quartz matrix. 3x2", £2.50p

68. PYROMORPHITE. Roughtengill Mine, Coldbeck Fells, Cumberland. Choice bright light green lustrous tapering hexagonal crystals to 1 cm in length thickly covering and lining large cavities on both sides of milky quartz matrix. Fine old-time specimen. 3 1/2x2x1 1/2", £6.00

69. PYRRHOTITE. Santa Eulalia, Chihuahua, Mexico. Intergrown group of dark bronzey coloured well formed terminated hexagonal crystals to over 1/2" in size, with odd ball-like masses of light brown Siderite. 1 1/2x1", £3.25p

70. QUARTZ var. ROCK CRYSTAL. Corinto, Minas Gerais, Brazil. Specimen A: Fine group of large clear elongated terminated crystals to 3" in length. 5x3 by 3" high, £40.00. Specimen B: Fine group of elongated water-clear slender terminated crystals to 2" in length. 3 3/4x2 1/2" by 2" high, £32.00. Specimen C: Choice group of water-clear elongated terminated crystals to 1 1/2" in length. 4x1 1/4" high, £22.00. All the above specimens are excellent for display and are virtually free of damage. They very much resemble the old specimens that came from Dauphine in France.

71. RHODOCHROSITE. Kassanida Mine, Chalkidiki, Greece. Light pink small sharp crystals attractively clustered and scattered over large areas of quartz/sphalerite/pyrite matrix with small Quartz crystals and odd bright silvery-grey twinned BOURNITE crystals to 5 mm in size. 5x4x2 1/2", £17.00

72. RHODOCHROSITE. Hotezel, Cape Province, South Africa. Very choice transparent bright raspberry-red crystals to 4 mm in size thickly covering blackish pyrolusite matrix. Very attractive specimen. 1x1 1/2", £13.00

73. RHODONITE. Broken Hill, N.S. Wales, Australia. Select lustrous raspberry-red well formed tabular crystals and crystal sections to over 1/2" in size richly scattered on and in Galena-rich matrix. 4x3x1 1/2", £18.00

74. RUBELLITE. Hebron, Oxford Co., Maine, U.S.A. Pinkish-red columinar crystal sections to 1" in length richly embedded in purplish Lepidolite with quartz and a little Spodumene. 4x2 1/2x1 1/2", £4.50p

75. SCHEFFERITE. Lingban, Vemmland, Sweden. Rich reddish-brown crystalline masses on and in hematite matrix with orangey spots of Derzellite. 2 1/2x2", £3.50p

76. SCORODITE. Wheel Perpendaves, Camborne, Cornwall. Specimen A: Small sharp sparkling crystals scattered in a 1 1/2" cavity in arsenopyrite/tourmaline veinstuff. 3x2x1 1/4", £4.50p. Specimen B: Select bright pale bluish crystal sprays scattered in a 1 1/2" cavity in tourmaline matrix. 2x1 1/4", £2.75p.

77. SIEGENITE. St. Joseph lead district, Missouri, U.S.A. Fine sharp silvery octahedral crystals to 3 mm in size richly covering creamy calcite crystals on matrix. 1x1 1/2x1 1/2", £16.50p

78. NATIVE SILVER. Silver Isle, Lake Superior, Canada. Rich silvery hackly masses in quartz matrix. 1 1/2x1 1/4x1", £8.00

79. SMITHSONITE (Cobaltian). Asmab, Otavi, S.W. Africa. Choice bright pink sharp crystals to 1" in size forming an intergrown group with a twinned creamy DERUSSITE crystal 1 cm in size in association. 1 1/4x1", £6.50p

80. SMITHSONITE. Asmab, Otavi, S.W. Africa. Lustrous lime-green sharp crystals to 3 mm in size richly covering large areas of cellular matrix with small creamy-white Calcite crystals. 1 1/2x1 1/2x1", £4.50p

81. SODDYITE. Kalungwe, Katanga, Zaire. Specimen A: Select lustrous yellowish small sharp crystals richly covering most of matrix. 1 1/4x1", £14.00. Specimen B: Small well formed yellowish crystals scattered and aggregated on matrix. 2x1 1/2", £4.50p. Specimen C: Small yellowish crystals scattered on one end of matrix. 1 1/4x1", £1.50p

82. SPHALERITE. Baxter Springs, Cherokee Co., Kansas, U.S.A. Specimen A: Very large bright black sharp crystals to 1" in size richly scattered and intergrown on both sides of matrix with creamy curved rhombic crystals of Dolomite. 3 1/2x2x2", £14.00. Specimen B: As specimen A, 2x1 1/2x1 1/2", £7.00
83. **SPHALERITE.** Hydraulic Shaft, Smelcleugh Mine, Nenthead, Cumberland. Specimen A: Choice bright black sharp crystals to 1 cm in size thickly encrusting altered limestone matrix. 5x3x2", £8.00. Specimen B: As specimen A, with crystals to ½" in size. 3x2", £3.50p.

84. **STIBNITE.** Knapes Mine, New Cumnock, Ayrshire, Scotland. Rich bright silvery-grey bladed masses associated with a little quartz. Specimen A, showing a little yellowish Stibiconite alteration in places, 4x3x1½", £4.50p. Specimen B: 3x2x1½", £1.75p.

86. **NATIVE SILVER.** Agrigento, Sicily, Italy. Select mostly transparent bright yellow mostly complete single crystal showing good sharp faces. 1½x1½", £2.25p.

87. **TARNOWITZITE.** Tsumeb, Otavi, S.W. Africa. Lustrous sharp creamy crystals to ½" in size intergrown on large areas of cellular matrix. 1½x1½x1½", £6.50p.

88. **TETRABORAX.** Mine Bois Noir, St. Priest-la-Prugne, Loire, France. Select light to dark green small sharp blocky crystals to 2 mm in size scattered over brownish iron quartz crystals on granite matrix. 2½x2x1½", £4.50p.

90. **ENDLICHITE (Arsenian Vanadinite).** Sierra de los Lamentos, Chihuahua, Mexico. Fine light brownish elongated skeletal hexagonal crystals to 1 cm in length very richly scattered over sparkling brown MOTTRAMITE crystals on matrix. 3x3x2", £23.00.

91. **VIVIANITE.** Blackgang Chine, Isle of White. Dark bluish crystals and crystal sections to 4 mm in size scattered on ferruginous matrix. 2½x1½", £2.25p.

92. **WELLOGANITE.** Francor Qry., Montreal, Quebec, Canada. Sharp translucent creamy crystals to 5 mm in size richly scattered in a deep ½" cavity in matrix with a little Analcime. 2½x1½x1½", £9.00.

93. **WULFENITE.** Sierra de los Lamentos, Chihuahua, Mexico. Fine bright orange large tabular crystals to ½" in size richly scattered on matrix with rich waxy creamy-yellow masses of SCHEELITE, some showing octahedral crystal faces. 4x3x1½", £6.50p.

94. **WOLFRAMITE.** Carrock Mine, Caldbeck, Cumberland. Very rich bright black bladed masses in milky quartz with rich waxy creamy-yellow masses of SCHELITE, some showing octahedral crystal faces. 4x3x1½", £6.50p.

95. **ZINCITE.** Blackgang Chine, Isle of White. Dark bluish crystals and crystal sections to 4 mm in size scattered on ferruginous matrix. 2½x1½", £2.25p.

---

Our apologies for the delay in sending out this month's list - we were away on an extended collecting trip in the north of England which proved very successful, and we will be offering fine specimens resulting from this trip on the next listing.
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

JUNE 1978

1. ALMANDINE GARNET. Deer Creek, Lemhi Co., Idaho, U.S.A. Lustrous red glassy crystal sections to $\frac{3}{4}$" in diameter richly scattered in blackish biotite gneiss. 3x2$\frac{1}{2}$x1$\frac{1}{2}$", £3.50.

2. ANATASE. Tysse, Norway. Fine sharp deep bluish crystals to 5 mm in size richly scattered on three sides of a clear well formed Quartz crystal. 3$\frac{3}{4}$" long by $\frac{3}{4}$" across the axis, £22.00.

3. APATITE. Colcerrow Quarry, Luxulyan, Cornwall. Specimen A: Well formed translucent pale blue chunky single hexagonal crystal. $\frac{3}{4}$" long by 1 cm across the axis. £2.25.

   Specimen B: Sharp clear pale greenish hexagonal crystals to 4 mm in size scattered on creamy Feldspar. 1x$\frac{1}{2}$", £1.75.

4. ARSENIOTHERITE. Sjogruva, Sweden. Rich light reddish masses on and in a dark matrix. 2$\frac{1}{4}$x2x1$\frac{1}{2}$", £2.50.

5. ARSENOPYRITE. Parral, Chihuahua, Mexico. Specimen A: Fine bright silvery sharp crystals to $\frac{3}{4}$" in size thickly encrusting a cellular matrix with odd small milky Quartz crystals. 4x2$\frac{1}{4}$x2", £23.00.

   Specimen B: Fine bright silvery sharp crystals to 1 cm in size richly covering matrix. 3$\frac{3}{4}$x2$\frac{1}{4}$x1$\frac{1}{2}$", £12.00.

   Specimen C: Bright silvery sharp crystals to $\frac{3}{4}$" in size covering matrix with a little greyish needly Aegirine. 3x2", £7.00.

   Specimen D: Select cluster of intergrown bright silvery sharp crystals to $\frac{3}{4}$" in size with a little Quartz. 2x1$\frac{1}{4}$x1", £4.50.

6. ATACAMITE. Mina la Farola, Copiapo, Chile. Specimen A: Bright green bladed crystals to 5 mm in length richly scattered on greenish Chrysocolla covering matrix. 3$\frac{3}{4}$x2", £6.50.

   Specimen B: As specimen A, but not quite so rich in Atacamite. 2$\frac{1}{4}$x1$\frac{1}{2}$", £2.50.

7. AXINITE. Botallack Head, St. Just, Cornwall. Specimen A: Select lustrous clove-brown sharp crystals to 1 cm in size thickly covering matrix. 1$\frac{1}{2}$x1$\frac{1}{2}$", £6.50.

   Specimen B: Lustrous sharp clove-brown crystals to over $\frac{3}{4}$" in size thickly lining a 1x1" cavity in matrix. 2x1$\frac{1}{4}$x1", £4.50.

8. AZURITE. Chassy, Rhone, France. Fine bright blue well formed crystals to 5 mm in size richly scattered all over and in cavities in cellular brown limonitic matrix with a little greenish Malachite in association. 2x1$\frac{1}{2}$x1$\frac{1}{4}$", £11.00.

9. BARYTES. Force Crag Mine, nr. Keswick, Cumberland. Select cluster of sharp lustrous creamy bladed crystals to 1" in size. 2$\frac{1}{2}$x2$\frac{1}{4}$x1$\frac{1}{2}$", £3.50.

10. BENITOITE. San Benito Co., California, U.S.A. Light blue sharp crystal 1 cm in size implanted on matrix with a little white Natrolite and a blackish crystal section of Neptunite 3 mm in length. 1x1", £4.50.
11. BEUDANTITE. Penberthy Croft Mine, St. Hilary, Cornwall. Sharp lustrous light olive coloured crystals mostly around 1 mm in size richly scattered in cavities in gossan matrix.

12. BORITE. Wheal Cock, St. Just, Cornwall. Very rich purply-blue masses associated with creamy white Calcite matrix. 3x2x1\(\frac{1}{2}\), £6.50p

13. BRAGNITITE. Harstig Mine, Umeåland, Sweden. Creamy-white platy crystals and crystal masses aggregated in cavities in Schefferite matrix. 2x1", £3.50p

14. BROCHANTITE. Mine la Farola, Copiapó, Chile. Bright green silky radiated tufts of needle crystals richly covering deep bluish Chrysocolla on matrix. Very attractive specimen. 3x1\(\frac{1}{2}\)x1\(\frac{1}{2}\), £13.00

15. CALCITE. Cammock Eals’ Mine, Wardale, Co. Durham. Fine large creamy sharp platy crystals to over 2" in size, free standing on quartz matrix with a light dusting of Pyrites in places, with the reverse side of the specimen covered with lustrous milky Quartz crystals to \(\frac{1}{4}\)" in size. Very attractive specimen for display. 4\(\frac{1}{8}\)x3\(\frac{1}{2}\)x2\(\frac{1}{4}\), £11.00

16. CALCITE. Millclose Mine, near Matlock, Derbyshire. Fine large doubly terminated translucent creamy-yellow Scalenohedral crystal. Choice display specimen. 6x3\(\frac{1}{2}\)x2\(\frac{1}{2}\), £14.00

17. CALCITE. Levant Mine, Pendeen, Cornwall. Choice creamy-white rosettes of platy crystals to \(\frac{1}{4}\" in size scattered on matrix with odd sharp dark grey CHALCOCITE crystals to 5 mm in size. 2\(\frac{1}{4}\)x2\(\frac{1}{4}\)x1\(\frac{1}{2}\), £7.00

18. CASSITERITE. Lady Guwendoline Mine, Germoe, Cornwall. Very rich heavy deep brownish mass associated with quartz and a little chlorite. An old label is attached to the specimen. 5\(\frac{1}{2}\)x3\(\frac{1}{2}\)x2\(\frac{1}{2}\), £8.50p

19. CASSITERITE. Wheal Meta, Breage, Cornwall. Select light brown parallel bands of fibrous 'wood tin' cutting a dark slaty matrix with a little quartz. The specimen has been cut and polished to show the structure to best effect. 3x2", £4.50p

20. CASSITERITE. Drakewalls Mine, Gunnislake, Cornwall. A large sharp deep brown lustrous crystal \(\frac{1}{2}\" in size implanted on chloritised slate matrix with a little quartz. One side of the specimen is encrusted with micro sparkling CHILDRENITE crystals. 2\(\frac{1}{2}\)x2x1\(\frac{1}{2}\), £7.00

21. CHABAZITE. Rubencorfel, Bohemia, C.S.S.R. Intergrown lustrous creamy sharp crystals to 1 cm in size scattered on matrix with minor blackish bladed Aegirine and feldspar and Astrophyllite. 2x1\(\frac{1}{4}\)x1\(\frac{1}{2}\), £2.25p

22. CERUSSITE. Mibladen, nr. Midelt, Atlas Mts., Morocco. Specimen A: Large translucent glassy slightly smoky twinned crystals to 1" in size aggregated and scattered on pinkish bladed Barytes matrix. 2\(\frac{1}{4}\)x2x1\(\frac{1}{4}\), £14.00. Specimen B: Fine sharp twinned slightly smoky translucent crystals to nearly \(\frac{1}{2}\" in size dotted on bladed barytes matrix. 2x1\(\frac{1}{2}\)x1\(\frac{1}{4}\), £5.50p. Specimen C: Fine transparent short twinned crystals to \(\frac{1}{2}\" in size aggregated on one end of pinkish platy crystalised barytes matrix. 2\(\frac{1}{4}\)x2x1\(\frac{1}{2}\), £4.50p

23. CHALCOPYRITE. French Creek, Chester Co., Pennsylvania, U.S.A. Select brassy skeletal crystals to \(\frac{1}{4}\" in size richly intergrown on magnetite matrix with odd sharp octahedral Pyrites crystals. 5\(\frac{1}{2}\)x3x1\(\frac{1}{2}\), £26.00

24. CHALCOCITE. Tincrft Mine, Illogan, Cornwall. Unusual elongated dark grey needly crystals to 8 mm in length richly scattered all over a cellular chlorite/quartz veinstuff. 4\(\frac{1}{2}\)x3", £23.00

25. CHALCOSIDERITE. Phoenix Mine, Linkinhorne, Cornwall. Deep greenish crystals and crystal aggregates richly lining cavities in gossanous limonite matrix. 1\(\frac{1}{4}\)x1\(\frac{1}{4}\)x1\(\frac{1}{4}\), £3.25p

26. CHRYSOTILE. Asbestos, Quebec, Canada. Fine silky greenish vein \(\frac{1}{2}\" thick cutting serpentinite matrix. 4\(\frac{1}{2}\)x2\(\frac{1}{4}\)x2\(\frac{1}{4}\), £4.50p
29. CLINOCLASIE. Wheal Gorland, St. Day, Cornwall. Select bluish small sharp crystals richly lining cavities in cellular quartz with a little Olivenite in association. 1\(\frac{3}{4}\) x 1\(\frac{3}{4}\), £5.50.

30. NATIVE COPPER. Santa Rita, New Mexico, U.S.A. Fine bright metallic dendritic fern-like sheet covering matrix. 3 x 2\(\frac{3}{4}\), £8.00.

31. NATIVE COPPER. Tincroft Mine, Illlogan, Cornwall. Very rich pure cellular crystal mass with a little milky quartz attached in places. 3 x 2\(\frac{3}{4}\) x 2\(\frac{3}{4}\), £11.00.

32. NATIVE COPPER. South Caradon Mine, St. Cleer, Cornwall. Rich pure cellular masses of spiky crystals, some with a little matrix attached. Samples each approx 1\(\frac{3}{4}\) x 1\(\frac{3}{4}\) in size, £2.50 each.

33. COBALITE. Hokensbo, Vastmanland, Sweden. Sharp silvery cubic crystal 5 mm in size partially embedded in pyrrhotite matrix. 1\(\frac{1}{2}\) x 1\(\frac{1}{2}\) x 1\(\frac{1}{2}\), £4.50.

34. CUPRITE. North Wheal Besset, nr. Redruth, Cornwall. Rich lustrous maroon coloured cellular mass of intergrown octahedral crystals to 3 mm in size with minor quartz in association. 3 x 2\(\frac{1}{4}\) x 2\(\frac{1}{4}\), £14.00.

35. CUPRITE. Wheal Gorland, St. Day, Cornwall. Bright reddish sharp octahedral crystals scattered in cavities in light brownish matrix. Crystals range up to 3 mm in size, 3 x 1\(\frac{1}{2}\) x 1\(\frac{1}{2}\), £5.50.

36. DANALITE. Vassjöborg, Västmanland, Sweden. Rich deep reddish masses scattered in matrix with a little pyrrhotite and fluorite. Specimen A: 2\(\frac{1}{2}\) x 2 x 1\(\frac{1}{2}\), £4.50. Specimen B: 2 x 1 x 1\(\frac{1}{2}\), £1.50.

37. DANURITE. Mine de Dufa, Chercas, San Luis Potosi, Mexico. Fine sharp lustrous creamy terminated crystals to nearly \(\frac{1}{2}\) in length completely covering and free-standing on matrix, with odd bright brassy sharp twinned CHALCOPRite crystals to 1 cm in size in association. 3 x 2\(\frac{1}{4}\), £23.00.

38. DEMANTOID GARNET. Val Malenco, Sondrio, Italy. Lime-green sharp crystals to 3 mm in size scattered on serpentinite matrix with creamy Asbestos in association. 2 x 2 x 1\(\frac{1}{2}\), £4.50.

39. DOLOMITE. Vrsac, Yugoslavia. Fine sharp creamy coloured crystals to \(\frac{3}{4}\) in size very richly covering dolomite/quartz matrix with sharp clear Quartz crystals to \(\frac{3}{4}\) in length, brassy Pyrites crystals to \(\frac{1}{4}\) in size, and creamy nail-head Calcite crystals to over \(\frac{1}{4}\) in size in association. Choice specimen for display. 5 x 3\(\frac{1}{2}\) x 2\(\frac{1}{2}\), £13.00.

40. DUNDASITE. Rattenberg, Carinthia, Austria. Creamy-white velvety crystal masses lining cavities in Siderite matrix with a little silvery-grey Dourronite in places. 3 x 2 x 1\(\frac{1}{2}\), £4.50.

41. ECKERMANITE. Norra Karr, Sweden. Rich greenish bladed masses intergrown with calcite. 3 x 2\(\frac{3}{4}\) x 1\(\frac{3}{4}\), £4.50.

42. ENARGITE. Butte, Silver Bow Co., Montana, U.S.A. Fine bright silvery-grey sharp crystals to \(\frac{3}{4}\) in size thickly lining large cavities in crystalline enargite matrix with odd small crystals of brassy Pyrites. 3 x 2\(\frac{3}{4}\) x 2\(\frac{3}{4}\), £17.00.

43. EOSPHORITE. Aracuai, Minas Gerais, Brazil. Select golden brown radiated sprays of sharp terminated crystals implanted on a quartz crystal. The sprays of crystals are 8 mm in diameter with individual crystals 2-3 mm in size. 12 x 8 x 2\(\frac{1}{2}\), £11.00.

44. EPIDOTE. Zeppau, Marva, C.S.S.R. Bright olive green small sharp crystals richly covering a schistose matrix. 2\(\frac{1}{2}\) x 1\(\frac{3}{4}\) x 1\(\frac{3}{4}\), £4.50.

45. ERYTHRITE. Mt. Cobalt, Queensland, Australia. Rich bright pinkish radiated needle crystals thickly covering matrix. 3 x 1\(\frac{3}{4}\), £3.50.

46. FLUORITE. Rock Candy Mine, Washington, U.S.A. Fine translucent light purplish-green stepped octahedral crystals to \(\frac{3}{4}\) in size free standing and intergrown on milky quartz covering greenish fluorite matrix. Choice display specimen. 5 x 4 x 3\(\frac{1}{2}\), £33.00.

47. FLUORITE. Heights Mine, Weardale, Co. Durham. Choice bright green sharp clear interpenetrant twinned cubic crystals to over \(\frac{1}{2}\) in size encrusting altered limestone matrix. Fine specimen of excellent colour. 4 x 3\(\frac{1}{2}\) x 1\(\frac{1}{2}\), £38.00.
48. FLUORITE. Cammock Eals Mine, Weardale, Co. Durham. Specimen A: Select transparent purple interpenetrant twinned cubic crystals to ¾" in size scattered over small bright milky Quartz crystals, with a later partial encrustation of creamy sharp Calcite crystals to ½" in size and odd bright brassy masses of Pyrites crystals to 5 mm in size. £1.20. Specimen B: Select light purply transparent interpenetrant twinned cubic crystals to ½" in size scattered over intergrown milky pyramidal Quartz crystals to ¾" in size. £5.50p.

49. FLUORITE. West Pastures Mine, nr. Stanhope, Co. Durham. Fine mostly transparent apple green sharp cubic crystals to ½" in size thickly encrusting a dome shaped brownish siderite matrix. £13.00.

50. FRANKLINITE. Franklin, Sussex Co., New Jersey, U.S.A. Very choice bright black sharp large octahedral crystals to over 1" in size partially embedded in calcite/crystalline franklinite matrix. £44.00.

51. GALENA. Blackdene Mine, Weardale, Co. Durham. Specimen A: Fina bright silvery-grey sharp cube-octahedral crystals to nearly ¾" in size richly scattered over intense purple transparent Fluorite crystals to 1 cm in size, covering a cellular fluorite-gelena matrix with small creamy calcite crystals covering the reverse side together with a little well crystallised Pyrites. £33.00. Specimen B: Fine bright silvery-grey large sharp cube-octahedral crystals to 1" in size implanted on intergrown light purply cubic Fluorite crystals. £11.00. Specimen C: Bright silvery-grey sharp cube-octahedral crystals to ½" in size forming an intergrown group with minor matrix attached. £4.50p.

52. GOETHITE variety WOOD IRON. Restormel Royal Iron Mine, Lostwithiel, Cornwall. Rich well banded dark brown radiated masses associated with a little Quartz. £2.75p. Specimen B: £1.50p.

54. HEMIMORPHITE. Broken Hill, Zambia. Fine translucent sharp terminated tabular crystals to ¾" in length aggregated in sprays and scattered all over cellular blackish coated limonitic matrix. £9.00.

56. HOLMQUISTITE. Uto, Varmland, Sweden. Select lustrous radiated blackish bladed crystal masses in schistose matrix. £2.75p.

57. IDOCRASE. Monte Somme, Vesuvius, Italy. Fine bright dark olive green sharp terminated crystals to 1 cm in size implanted in a 1" cavity on one end of a bladed crystalline hornblende matrix. £17.00.

58. INESITE. Hale Creek Mine, Trinity Co., California, U.S.A. Specimen A: Fine bright pink sharp terminated crystals to 1 cm in size thickly lining a 1½x1½" cavity in matrix. £15.50p. Specimen B: £11.00. Specimen C: £9.00. Specimen D: £4.75p.

59. KIDWELLITE. Coon Creek, Polk Co., Arkansas, U.S.A. Light olive-green botryoidal mass covering reddish-brown DiRAUNITE on iron matrix. £4.50p.

60. KNEBELITE. Svartbergsgruven, Sweden. Rich heavy resinous brownish mass. £4.50p.

61. LEPIDOLITE. Tordol, Telemark, Norway. Select lavendar coloured platy crystal mass with a little Quartz. £1.25p.

62. LEPIDOLITE. Tordal, Telemark, Norway. Select lavender coloured platy crystal mass with a little Quartz. £1.25p.

63. LEUCITE. Viterbo, near Rome, Italy. Sharp creamy-white crystals to ¾" in size scattered and partially embedded in matrix. £4.50p.

64. LIDEMENITE. Wheal Bossat, Illogan, Cornwall. Specimen A: Sparkling olive-green micro crystals covering large areas of chalcoite rich matrix. £5.50p. Specimen B: Small sharp olive-green crystals lining cavities in Quartz. £3.25p.
65. LIRICONITE. Wheal Garland, St. Day, Cornwall. Select bright blue sharp crystals to 4 mm in size thickly covering matrix. 1 x 2", £13.00

66. NATIVE MERCURY. Healdsburg, Sonoma Co., California, U.S.A. Silvery globules richly scattered on and in quartz/pyrites matrix with a little reddish Cinnabar and Fetianite. 2 1/2 x 1 1/2 x 1", £7.00

67. MOLYDOCSCHELITE. Elgfall, Sweden. Lustrous creamy masses scattered in massive orange-brown matrix. 2 x 2 x 1 1/2", £2.75p

68. NEPTUNITE. San Benito Co., California, U.S.A. Specimen A: Very choice large sharp terminated blackish crystals to 1" in size richly scattered over and protruding from whitish natrolite on an altered serpentine matrix. Fine specimen for museum display. 4 x 2 x 1 1/2", £110.00. Specimen B: Fine sharp terminated elongated blackish crystal 1 1/2" in length protruding from whitish natrolite on serpentine matrix, with several smaller Neptunite crystals. 3 x 1 x 1 1/2", £23.00. Specimen C: Fine sharp terminated blackish crystals to 2" in length scattered over natrolite matrix. 1 1/2 x 1 1/2 x 1", £16.00. Specimen D: As specimen C, with crystals to 3/4" in size. 1 1/2 x 1 1/2 x 1", £11.00. Specimen E: As specimen D, with crystals to 1/2" in size. 1 1/2 x 1 1/2 x 1/2", £4.50p.

69. PARATACAMITE. Levant Mine, Pendre, Cornwall. Rich crust of sparkling green micro crystals on hematite/chalcanthite veinstuff. 2 x 2", £.50p

70. PEROVSKITE. San Benito Co., California, U.S.A. Specimen A: Large sharp lustrous black crystals to 5 mm in size scattered on matrix with small sharp octahedral MAGNETITE crystals. 2 x 1 1/2", £8.00. Specimen B: Sharp blackish crystals to 3 mm in size scattered on matrix with minute Magnetite crystals and a little Andradite garnet. 1 1/2 x 1 1/2 x 1 1/2", £3.25p

71. PLUMBOFERRITE. Jakobsberg, Sweden. Very rich black platy crystalline masses associated with granular black Magnetite and a little calcite. 2 x 1 1/2 x 1 1/2", £11.00

72. POLYOMALACHITE. Old Gunnislake Mine, Gunnislake, Cornwall. Rich dark green masses and veinlets associated with milky quartz. 2 x 2 x 1 1/2", £3.25p

73. PYRITES. Rio Marina, Elba, Italy. Specimen A: Choice very bright brassy sharp pyritohedral crystal 1/2" in diameter implanted on platy black Specularite matrix with other Pyrites crystals. 3 x 2 x 2", £11.00. Specimen B: Fine sharp bright brassy single pyritohedral crystal with smaller crystals attached in places. Each approx 3/4 x 2", £1.50p each.

74. QUARTZ. Morro Velho goldmine, Minas Gerais, Brazil. Fine mostly clear sharp terminated crystals to 1/2" in length forming an intergrown group with odd small sharp brassy PYRRHOTITE crystals, and much lenticular creamy DOLomite crystals on the reverse side. Nice display specimen. 5 x 3 x 2", £.50p

75. QUARTZ. Blackdene Mine, Uyardale, Co. Durham. Select lustrous creamy-white large sharp pyramidal crystals to 1" in size forming an intergrown group with odd sharp brassy PYRITES crystals scattered on it. The reverse side shows several light purply cubic FLUORITE crystals to 1" in size and Pyrites crystals to 1/2" in size. 7 1/2 x 6 x 2", £14.00

76. RHODOCHROSITE. Felsobanyo, Rumania. Small sharp light pink saddle-shaped crystals completely covering both sides of quartz matrix. Very attractive specimen. 6 x 4 x 1 1/2", £.50p

77. ROSASITE. Ojuela, Durango, Mexico. Rich light greenish botryoidal velvety masses richly lining large cavities in cellular brown limonitic matrix. 3 1/2 x 3 x 2 1/2", £5.50p

78. ROSENGUSTITE. Norre Kerr, Sweden. Divergent creamy coloured bladed crystalline masses scattered through a dark matrix. 2 x 2", £3.25p

79. SCHEELITE. Choon Su, Chungchongpukdo, Korea. Fine very large lustrous sharp brownish single crystal. Largest crystal face 2", overall size of specimen 2 1/2 x 2 1/2 x 1 1/2", £38.00

80. SIDERMITE. Tincroft Mine, Illogan, Cornwall. Lustrous light brown sharp octahedral appearing crystals to 1/2" in size scattered on cellular hematite/quartz. 1 1/2 x 1 1/2, £2.50p

81. SPHALERITE. Coolcleeugh Mine, nr. Nenthead, Cumberland. Specimen A: Fine large plate of sharp bright black intergrown crystals to 1 cm in size with a partial overlying of creamy Calcite crystals. 6 x 5 x 1 1/2", £15.50p. Specimen B: Select intergrown group of lustrous black crystals to 1/2" in size. 4 x 3", £6.50p.
82. SPHALERITE. Wheal Jane, Bos, Cornwall. Lustrous black well formed crystals to 8 mm in size scattered over matrix with a little pyrites and unusual red-tipped elongated QUARTZ crystals to 1/2" in length. 3x2x1 1/2", £6.50p

83. STILBITE. Drum, Oregon, U.S.A. Choice creamy-white sharp sheaf-like crystals to 1/4" in length thickly encrusting both sides of matrix. 4x2x1/2", £6.50p

84. STILBITE. Mullaley, N.S. Wales, Australia. Very choice large sharp orangey coloured sheaf-like crystals to 1/2" in size free standing and scattered on intergrown smaller stilbite crystals with a little radiated sparkly Quartz in association. Fine display specimen. 4 1/2x3x1 1/2", £44.00

85. TARDUTTITE. Broken Hill, Zambia. Specimen A: Fine sharp transparent crystals mostly around 2-4 mm in size thickly scattered over and lining cavities in cellular brown limonitic matrix with odd red-like creamy PHOSPHOXYLITE crystals to 4 mm in size. 3x2x1 1/2", £16.50p. Specimen B: Fine lustrous clear sharp crystals to 3 mm in size thickly covering large areas of limonitic matrix. 2x1 1/2x1/2", £8.00. Specimen C: Bright clear sharp crystals to 2 mm in size thickly lining large cavities in cellular matrix. 1 1/2x1/4", £3.25p

86. TENERITE. Askagen, Sweden. Rich creamy-white crusts covering CERITE matrix. 2x2x1 1/2", £4.50p

87. TOPAZ. Diamond Rock, Moure Mt., Co. Down, N. Ireland. Sharp clear terminated crystal 6 mm in size implanted in a 1/4" cavity in meteoric granite with creamy feldspar and small smoky quartz crystals. 2x2x1 1/2", £3.25p

88. META-TENERITE. Old Gunnislake Mine, Gunnislake, Cornwall. Specimen A: Choice bright green platy crystal masses to 8 mm in size very richly scattered over granite matrix. 4x3 1/2", £13.00. Specimen B: Thin bright green platy crystals to 5 mm in size scattered on quartz matrix. 3x2x1 1/2", £4.50p

89. TENERITE. Musonoi, Katonga, Zaire. Fine bright green sharp platy crystals to 1/4" in size intergrown on a 1/2" area of cellular quartz/psilomelane matrix. 1 1/2x1/2", £3.00

90. TURQUOISE. Dunny Mine, nr. St. Austell, Cornwall. Rich very bright blue masses associated with minor quartz and altered granite. This material is amongst the best nicest yet found in Cornwall. Specimen A: 4 1/2x2 1/2x1 1/2", £5.50p. Specimen B: 2 1/2x1 1/2x1 1/2", £3.25p. Specimen C: 1 1/2x1 1/2x1 1/2", £1.50p

91. WITHERITE. Settlingstones Mina, Haydon, Northumberland. Select intergrown group of lustrous creamy-white pyramidal crystals to over 1/2" in size on massive witherite. 3x2x1 1/2", £6.50p

92. WOLFRAMITE. Hingston Down, Gunnislake, Cornwall. Rich black bladed crystalline masses in milky quartz with a little silvery Arsenopyrite in association. Specimen A: 3x2x1 1/2", £3.25p. Specimen B: 2 1/2x1 1/2x1 1/2", £2.50p

93. WOODHOUSEITE. White Mt., Mono Co., California, U.S.A. Specimen A: Select sharp creamy coloured crystals to 4 mm in size richly scattered in cavities in milky quartz with odd quartz crystals in places. 2 1/2x2 1/2x1 1/2", £13.00. Specimen B: As specimen A, 2x2x1 1/2", £8.00. Specimen C: Small sharp creamy crystals to 3 mm in size scattered on milky quartz. 2x2x1 1/2", £4.75p. Specimen D: Sharp creamy crystals to 3 mm in size scattered along one side of milky quartz matrix. 2x1 1/2", £2.50p

94. DELOMITES - from the Oxford Clay, Bedford. Jurassic age. Fine sharp clean specimens in good condition, each approx 4 1/2" long, £2.25p each.

INTERNATIONAL GEM, MINERAL AND CRAFT FAIR - Portsmouth Centre Hotel, Portsmouth, Hampshire. 7th-10th July (1pm - 6pm on the 7th, and 10am - 6pm on the 8th, 9th and 10th)

We shall be attending this Show and our stand numbers are 12 and 13. We look forward to meeting you there if you are able to come, and apart from the general specimens on sale we shall have many fine and interesting Cornish pieces and some choice Pyromorphites from our recent mining operations in Cumberland.
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

JULY 1978

1. ALTHAUSITE. Buakerud, Norway. Rich deep reddish-brown mass associated with muscovite mica. 3x2", £4.50p

2. ANDRADITE GARNET. Belstone Consols Mine, Sticklapath, Devon. Bright olive coloured sharp crystals to 5 mm in size encrusting matrix. 3x2x1 1/2", £4.50p

3. ANDRADITE GARNET. Junnila Mines, San Benito Co., California, U.S.A. Specimen A: Very bright sharp crystals mostly around 2-3 mm in size thickly covering matrix. Bright and attractive specimen. 4x3 1/2", £17.00. Specimen B: Small bright olive coloured crystals covering large areas of matrix. 3x2", £4.50p. These specimens are the variety of Andradite known as TOPAZOLITE.

4. ANGLESITE. Monte Poni, Iglesias, Sardinia. Specimen A: Sharp transparent twinned crystals to 1/4" in size thickly lining a 1" cavity in Galena matrix. 2 1/2x2x1 1/2", £8.00. Specimen B: Sharp creamy twinned crystals to over 1/4" in size intergrown on matrix. 1 1/4x1", £5.50p. Specimen C: Sharp creamy twinned crystals to 5 mm in size intergrown on a 1/4" area on matrix. 13x1 1/2x1", £1.50p.

5. APATITE. St. Gotthard, Ticino, Switzerland. Sharp transparent crystals to 4 mm in size scattered over matrix with odd large chlorite coated ADULARIA crystals to over 1/4" in size. 2x1 1/2 x 1", £6.50p.

6. ARSENOPYRITE. Trepa, Yugoslavia. Fine bright silvery sharp crystals to 1/4" in size, many showing interesting cross twinning, scattered over pyrite/sphalerite matrix with numerous small milky Quartz crystals, unusual etalactite-like masses of Galena to 1" in size, odd large bright black Sphalerite crystals to over 1/4", and a little Calcite and Pyrites. Specimen is attractive for display. 5x1 1/4 x 1 1/4", £39.00.

7. ARTINITE. Clear Creek, San Benito Co., California, U.S.A. Fine snow-white radiated needle crystals completely covering altered serpentinite matrix. 3x2", £8.00.

8. ASEFERRITE. Orunsjogruven, Sweden. Rich fibrous golden mass associated with minor matrix. 2 1/2x2x1 1/2", £4.50p

9. AUTUNITE. South Terras Mine, St. Stephen, Cornwall. Pale green flakes and masses scattered on slightly smoky Quartz. 1 1/4x1 1/2x1", £1.25p

10. AZURITE. Tsumeb, Otavi, S.W. Africa. Fine lustrous bright blue sharp crystals to 1 cm in size intergrown on a 1 1/4x1 1/4" area of crystalline azurite/cerussite matrix with a little greenish Malachite in places. 2 1/2x2x1 1/2", £18.00.

11. AZURITE. Sir Domonir Mine, Mt. Painter, S. Australia. Select cluster of large light blue tabular crystals to over 1/4" in size slightly altered to greenish Malachite in places. 1 1/4x1 1/4x1", £5.50p.
12. AZURITE. El Cobre, Concepcion del Oro, Zacatecas, Mexico. Small bright blue sharp crystals scattered over slightly amethystine quartz. 2½x1½x1½", £4.50p

13. BARYTES. Pallasflat, nr. Egremont, Cumberland. Fine mostly transparent delicate platy tabular crystals to 1" in size completely covering both sides of limonitic matrix with numerous clear CALCITE crystals to ½" in size in association. Fine old specimen. 3½x2½x2½", £23.00

14. BARYTES. Mt. Wellington Mine, Twelveheads, Cornwall. Specimen A: Lustrous creamy-grey sharp tabular crystals to 1 cm in size aggregated in clusters and scattered all over cellular chalcopyrite matrix. 2½x1½x1½", £6.50p. Specimen B: As specimen A, but with the crystals forming an intergrown mass. 1½x1½", £3.50p

15. BARYTOCALCITE. Nentsberry Mine, Alston Moor, Cumberland. Fine lustrous golden-brown sharp crystal speys to ¼" in size thickly lining cavities in crystalline creamy-white Witherite matrix. 3x2½x1½", £9.00

16. BARYTOCALCITE. Nentsberry Mine, Alston Moor, Cumberland. Select sharp tabular crystals to ¼" in size forming rosette-like masses and coated with a thin crust of creamy-white Barytes, covering a 3x2" area of matrix. This specimen is entirely different in form to no. 15, and came from a large solitary cavity in the vicinity of the Admiralty Flats. 3½x3½x2", £7.00

17. BAYLDONITE. Wheal Carpenter, Gwinear, Cornwall. Very rich light green cellular crystalline mass with a little milky quartz. 2½x1½x1½", £5.50p

18. BERYL. Ankazobe, Madagascar. Lustrous translucent sea-green hexagonal crystal section 1½" long by 1 cm across the axis, embedded in quartz. 2½x1½x1½", £3.25p

20. BOURNONITE. Julcani Mine, Junin Prov., Peru. Sharp bright silvery-grey metallic twinned crystals to 4 mm in size scattered over both sides of a crystallised quartz matrix with a little pyrites in places. 2½x2½x1½", £14.00

21. CALCITE. Tsumeb, Otavi, S. Africa. Fine transparent sharp rhombic crystal 1½" in size implanted on matrix with crusts of light greenish DUFTITE. Attractive little specimen. 2½x1½x1½", £4.75p

22. CASSITERITE. Kinta Valley, Malaya. Select heavy crystalline mass of unusual light brown to cream-white cassiterite, showing an interesting banded colour zoning in places. 3x2½x2", £16.50p

23. CASSITERITE. Blue Hills Mine, St. Austes, Cornwall. Lustrous deep brown sharp crystals mostly around 4-5 mm in size encrusting matrix. 1½x1½x1½", £3.25p

24. CASSITERITE - alluvial tin. Breany Moor, Lanlivery, Cornwall. Solid water-worn rounded brownish pebble. 1x1", £1.50p

25. CHALCOCITE. Trenwith Mine, St. Ives, Cornwall. Very rich heavy deep grey mass with a little sphalerite in association. 2½x2½x1½", £2.25p

26. CHALCOPYRITE. Baxter Springs, Cherokee Co., Kansas, U.S.A. Fine bright golden sharp crystals to ½" in size richly scattered over sharp creamy dog-tooth CALCITE crystals to 1 cm in size, with a little dark brownish limonite. 3½x3½x1½", £11.00

27. CHURCHITE. Seavassal, Marin Co., California, U.S.A. Creamy-white micro crystallised crust covering areas of limonitic matrix. 3¾x1½", £2.25p

28. CLINOCLESE. Wheal Gerland, St. Day, Cornwall. Lustrous deep blue crystals and crystal masses to 3 mm in size richly lining cavities in cellular quartz with a little crystallised OLIVENITE. 1½x1x1", £5.50p

30. NATIVE COPPER. Wolverine Mine, Keweenaw Pen., Michigan, U.S.A. Heavy solid hackly bright metallic mass with odd patches of NATIVE SILVER. 3½x2½x1½", £9.00

31. NATIVE COPPER. Carharrack Mine, Gwennap, Cornwall. Tarnished metallic branching dendritic crystalline plate. 3½x1½", £3.00
32. CUPRITE. Bogoslovsk, Ural Mts., Russia. Lustrous deep red sharp crystals to 4 mm in size scattered along one side of quartz matrix. 2½×1½", £13.00
33. CUPRITE. Wheal Damsel, Guernap, Cornwall. Small sharp deep red octahedral crystals richly covering both sides of cellular quartz veinstuff. 1¼×1¼", £11.00
34. DIOPTASE. Tsumeb, Otavi, S.W. Africa. Fine bright emerald green sharp crystals to over ½" in size attractively scattered and free standing on creamy calcite covering matrix. 1½×1½", £11.00
35. ELBAITE (variety of Tourmaline). Varutrask, Vasterbotten, Sweden. Light olive-green striated elongated crystal sections to over 1" in length richly embedded in pagmatite. 2×2½×1½", £2.50p
36. FLUORITE. Blackdenne Mine, Weardale, Co. Durham. Specimen A: Transparent pale purple to yellowish sharp cubic crystals to ¼" in size forming an intergrown group with small Quartz, Calcite and light brown Siderite crystals scattered on them, and also odd bright brassy Chalcopyrite crystals to ¼" in size. 3×2×1", £5.50p. Specimen B: Light purple transparent sharp cubic crystals to ¼" in size forming an intergrown cluster. The crystals show internal 'ghosting'. 2½×2½×1½", £5.50p
37. GALENA. Naica, Chihuahua, Mexico. Very bright sharp complex crystals to 8 mm in size richly scattered all over a cellular matrix with small bright brassy crystals of Pyrites and a little creamy Calcite. 3×2½×2½", £9.00
39. GOETHITE. Botallack Mine, St. Just, Cornwall. Small lustrous blackish sharp crystals richly scattered over a stalactitic mass of banded goethite with a little quartz in association. 2×2×1", £4.50p
40. NATIVE GOLD. Witwatersrand, Transvaal, S. Africa, Specimen A: Rich light golden thin plates and hackly masses covering areas of 'banket quartz'. 2½×1½×1", £13.00. Specimen B: Rich light golden hackly masses scattered through 'banket quartz'. 1½×1½×1", £5.50p. Specimen C: Small light golden masses scattered in 'banket quartz'. 1×1", £1.25p
41. HARMOTONE. Bellsgrove Mine, Strontian, Argyllshire, Scotland. Fine lustrous white sharp twinned crystals to 1 cm in size intergrown on calcite matrix. 2½×2½×1", £6.50p.
42. HEMATITE. Rio Marina, Isle of Elba, Italy. Sharp bright black lenticular crystals to 1" in size intergrown on crystalline hematite matrix. 2½×2½×1½", £8.00
43. HEMATITE. St. Gotthard, Ticino, Switzerland. Bright black platy crystal 'roses' to 8 mm in diameter intergrown and scattered on matrix with small Adularia crystals. 1½×1", £5.50p
44. IDOCRASE. Val Camonica, Piedmont, Italy. Lustrous light brownish sharp crystals to ½" in size scattered on matrix with a little creamy calcite. 2×2×1", £8.00
45. IDOCRASE. Bellecombe, Piedmont, Italy. Fine bright dark olive coloured crystals to ¼" in size intergrown on matrix. 1½×1½×1½", £6.50p
46. JAMESONITE. Treore Mine, nr. Port Isaac, Cornwall. Rich bright silvery-grey metallic fibrous mass associated with milky quartz. 3×2½×1", £4.50p
47. JAMESONITE. Julcani Mine, Junin Province, Peru. Steely-grey felted needle masses very richly covering both sides of pyrite matrix with 6 mm bright brassy Pyrites crystals and bright silvery-grey twinned Bouronite crystals to 3 mm in size in association. 2½×1½×1½", £6.50p
48. JAROSITE. Capo Calamita, Isle of Elba, Italy. Specimen A: Small bright sharp light brown crystals very richly covering and lining cavities in cellular matrix. 2×2×1", £11.00. Specimen B: Small bright sharp light brown crystals lining cavities in cellular matrix with a little creamy-yellow micro crystallised NATROCARDOSITE. 2×1½×1", £7.00. Specimen C: As specimen A, 1×1×1", £4.50p. All these specimens are extremely rich examples of this mineral, which is rare in well defined crystals.
49. KINOCITE. Christmas Mine, Gila Co., Arizona, U.S.A. Light blue micro crystals and crystal masses associated with small sharp Apophyllite crystals on matrix. 2½×1½×1", £4.50p
50. LEUVNITE. Parkgate Dqy., Templepatrick, Co. Antrim, N. Ireland. Creamy white small sharp crystals richly lining numerous cavities in basalt matrix. 3x1/2x1/2", £2.75

51. LIBETHENITE. Mindola Openpit, Kitwe, Zambia. Select sharp lustrous dark olive-green crystals and crystal clusters, some with minor matrix attached. Specimens each approx 1x1 cm, £4.50p each.

52. MAGNETITE. Traversella, Piedmont, Italy. Bright black sharp complex crystals to 1/2" in size richly lining cavities in cellular magnetite/calcite matrix. 3x2/3x1/2", £7.00

53. MAGNIEFERRITE. Langban, Värmland, Sweden. Rich blackish crystalline masses and small crystals scattered through creamy dolomite matrix. 3x2x1/2", £4.50p

54. MARCASITE. Para Mine, Llanrhaeadr, Denbighshire, N. Wales. Bright brassy sharp lenticular crystals to 5 mm in size thickly intergrown and covering calcite. 1/2x1", £2.25p

55. MILLERITE. Coedely Colliery, Llantrisant, Glamorgan, S. Wales. Light brassy needle crystals to 1/8" in length spanning a 1/2" cavity in ironstone matrix with lenticular light brown Siderite crystals in association. 2x1/2x1/2", £4.50p

56. MIMETITE. Tsumeb, Otavi, S.W. Africa. Fine lustrous light yellowish hexagonal crystals to 5 mm in size richly scattered over an unusual corroded Galena crystal with a sharp twinned creamy CERUSSITE crystal 1/2" in size in association. 1/2x1/2x1/2", £6.50p

57. MINUM. Middle Vein, Grassington Moor, Yorkshire. Light reddish masses scattered on and in Galena. 1/8x1/8", £4.50p

58. OLIVENITE. Wheal Unity, Gunnarap, Cornwall. Small bright olive-green crystals lining a 2x1" cavity in radiated fibrous 'wood olivenite' on brecciated quartz veinstuf. 2x2x1/2", £12.00

59. ORTHOCLASE replaced by Kaolin. Treverbyn, Hensbarrow Moor, Cornwall. A fine sharp cross twinned creamy crystal 2x1/2" in size partially embedded in altered granite. Good matrix specimen of this pseudomorph, which are now becoming scarce. 2x2x1/2", £3.50p

60. PHARMACOSIDERITE. Wheal Gorland, St. Day, Cornwall. Bright green sharp cubic crystals to 3 mm in size lining cavities in dense limonitic gossan matrix. 2x1x1", £4.50p

61. PHLOGOPITE. Fort Dauphin, Madagascar. Bright golden brown hexagonal crystals and 'books' to over 1/2" in size richly embedded in creamy Calcite. 2/3x2/3x1/2", £4.50p

62. PIEMONTITE. Jakobsberg, Nordmark, Sweden. Rich reddish masses scattered in creamy granular dolomite matrix. 2x1/2x1/2", £2.50p

63. PLANCHEITE. Mufufila Mine, Zambia. Rich light blue radiated fibrous masses intergrown with quartz and a little crystalline bright green Malachite. 3x2/3x1/2", £8.00

64. PREHNITE. Habachtal, Salzburg, Austria. Small lustrous sharp glassy crystals richly scattered over sharp creamy ADULLAIA crystals to 5 mm in size with a partial coating of light greenish Chlorite in places, on a gneiss matrix. 4x3x1/2", £8.00

65. PSEUDOMALACHITE. Buena Mubwe, nr. Kitwe, Zambia. Solid deep green banded crystalline mass with small sharp crystals lining cavities. 2x1/2x1", £4.50p

66. PSILOMELANE. Trebartha Lemanne, nr. Trelly, Cornwall. Select blackish-grey cellular mass with a lustrous attractive botryoidal surface. 3x3x1/2", £7.00

67. PYRITES. Quinivilca, Libertad Dept., Peru. Fine bright brassy sharp striated cubic crystals to nearly 1/2" in size forming an intergrown group with a little platy crystalised Calcite, small greyish crystals of Galena and a little Sphalerite in association. 2x2x1/2", £9.00

68. PYRITES. Wheal Jane, Kynance, Cornwall. Unusual bright brassy stalactitic mass with a botryoidal crystalline surface. 3x1/2x1/2", £7.00. Specimen B: 2x1", £2.50p
69. **PYROMORPHITE.** Roughtengill Mine, Coldbeck Fells, Cumberland. Specimen A: Fine lustrous bright yellow-green sharp hexagonal crystals to ¼" in size very richly scattered over both sides of cellular quartz veinstuf. 4x2½x2", £33.00. Specimen B: Fine yellowish lustrous sharp hexagonal crystals to ½" in size thickly intergrown on cellular quartz. 2½x2½x1½", £24.00. Specimen C: Bright yellowish sharp lustrous hexagonal crystals mostly around 4-5 mm in size very richly intergrown and scattered on cellular quartz. 2x1½x1¼", £18.00. Specimen D: Select lustrous yellowish-green sharp hexagonal crystals to 4 mm in size thickly covering both sides of cellular quartz. 2x1½x1½", £11.00. Specimen E: Lustrous yellow-green sharp hexagonal crystals to 5 mm in size forming a rich intergrown mass with minor matrix. 1½x1½x1", £6.50p. These specimens are from a recent discovery at Roughtengill and are equal to the 'old-time' pyromorphite for which this mine was noted.

70. **QUARTZ.** Mt. Wellington Mine, Twelveheads, Cornwall. Specimen A: Fine lustrous sharp elongated terminated milky crystals to over ½" in length completely covering a flat matrix. Minor dusting of Pyrites in places. Good specimen for display. 5½x5", £9.00. Specimen B: As specimen A, but with crystals to ½" in size. 3½x3½x1¼", £4.75p.

71. **SMOKY QUARTZ.** Minas Gerais, Brazil. A choice clear doubly terminated crystal of good smoky colour with a moveable bubble trapped in liquid inside the crystal, which can be easily seen when the crystal is moved from side to side. 3½x2½x1¾", £23.00.

73. **RHODOCHROSITE.** Iloildanishi Mine, Hokkaido, Japan. Select lustrous pink botryoidal mass thickly covering cellular rhodochrosite with odd small cubic crystals of pyrites on the reverse side. 3x2", £8.00.

74. **RUBY CORUNDUM.** Iveland, Norway. Ruby red lustrous crystal sections to ½" in size embedded in mica schist. 3x1½", £1.50p.

75. **SENNICHTITE.** Djebel Hammamet, Constantine, Algeria. Select sharp single creamy-grey octahedral crystals. Each approx 1x1 cm in size, £4.50p each.

76. **SENGITE.** Musonoi, Katanga, Zaire. "rute apple green crystalline masses and micro crystals scattered in areas on cellular malachite rich matrix with odd plates of bright green Torbernite. 2x1½x1", £4.50p.

77. **SIDERITE.** Morro Velho Goldmine, Minas Gerais, Brazil. Lustrous light brown sharp lenticular crystals to 1 cm in size richly scattered over matrix with platy crystals of creamy Calcite and numerous small sharp hexagonal bronze crystals of Pyrrhotite. 3x2½x1½", £6.75p.

78. **SPhalerite.** Hydraulic Shaft, Smallslab Mine, Nenthead, Cumberland. Very bright block sharp crystals to 1 cm in size thickly encrusting matrix. Very nice sample for display. 5½x3½", £12.00.

79. **SPhalerite.** Baxter Springs, Cherokee Co., Kansas, U.S.A. A very large sharp bright black composite single crystal with smaller crystals attached. 13x1½x1", £6.50p.

80. **SPhalerite.** Allenheads Mine, Allenheads, Northumberland. Fine bright block sharp crystals to over ½" in size richly scattered over matrix with small pale purple transparent crystals of Fluorite and with a thick encrustation of lustrous creamy crystallised Dolomite and larger fluorite crystals on the reverse side. 3½x3x2½", £8.00.

82. **STILLMORE.** Trummary, White Mt., Co. Antrim, N. Ireland. Lustrous creamy-white sharp bladed crystals to ½" in size thickly covering a 2x1½" area on basal matrix. 3x2½x1½", £3.50p.

84. **TENANTITE.** Levant Mine, Pendean, Cornwall. Small bright silvery-gray sharp crystals lining a ½" cavity on one end of chalcopyrite/tennantite matrix. 2x1½", £4.50p.
85. TETRAHEDRITE. Casnapalca, Junin Prov., Peru. Specimen A: Fine bright silvery-grey sharp crystals to 1 cm in size scattered over matrix with numerous bright GALENA crystals mostly around 1/4" in size. Very rich and attractive specimen. 4x3/4x1/2", £24.00. Specimen B: Bright silvery-grey sharp twinned crystals to 8 mm in size richly intergrown and scattered all over matrix with odd very bright cubic crystals of GALENA to 1/4" in size. 3x2 1/2", £17.00. Specimen C: Bright silvery-grey sharp crystals to 1/4" in size associated with slender transparent to milky quartz crystals and odd very bright brassy crystals of pyrites on quartz matrix. 2x2x1", £6.00.

86. TETEBERNITE. Wheal Edward, St. Just, Cornwall. Light greenish sharp platy crystals to 3 mm on edge richly infilling cavities in iron quartz. 2x1x1", £4.50p.

87. TETRIPLITE. Alcabavos, Beira-Alta, Portugal. Solid pure resinous dark brown masses. Specimen A, 2 1/2x2x1 1/4", £3.25p. Specimen B: 2 1/4x1 1/2x1/2", £2.25p.

88. TYROLEITE. Falkenstein, Tirol, Austria. Lustrous greenish scales and platy crystals lying flat on quartzose matrix. Specimens each approx 1x1", £1.25p each.

89. VARISCITE. Hot Springs, Garland Co., Arkansas, U.S.A. Rich bright green thick crystalline crusts and masses covering areas of and infilling cavities in a brecciated matrix. 2x1 1/2x1/2", £4.50p.

90. VIRDINE. Västena, Skane, Sweden. Light green crystal sections to 8 mm in size embedded in schist. 2 1/2x1 1/4", £2.25p.

91. WAVELLITE. Highdown Quarry, Filleigh, Devon. Choice silky complete radiated creamy hemispherical masses to 1" in diameter richly scattered all over altered slate matrix. Rich and attractive specimen for this location. 4x3 1/4x1 1/2", £8.00.

92. WILLEMITE. Tsumeb, Otavi, S.W. Africa. Transparent sharp lustrous crystals to 3 mm in size richly lining a 2x2" cavity in matrix with several large bright creamy sharp rugose crystals of CALCITE to over 1" in size. 3 1/2x2 1/2x1 1/2", £14.00.

93. WILLEMITE. Franklin, Sussex Co., New Jersey, U.S.A. Rich lustrous apple-green masses associated with creamy Calcite and odd black crystal sections of octahedral Franklinite and odd spots reddish Zincite. Choice sample for fluorescent display. 3x2x1 1/2", £4.50p.

94. WOLFRAMITE. Carrock Mine, Carrock Fell, Cumberland. Bright black long bladed crystal sections intergrown with quartz and much creamy Scheelite and pale green APATITE. 3x1 1/2x1 1/2", £3.25p.

95. YTTROTITANITE. Arendal, Aust-Agder, Norway. Rich light brownish lustrous mass with a little muscovite mica in association. 3x2x1 1/2", £3.25p.

---

INTERNATIONAL GEM, MINERAL & CRAFT FAIR - Portsmouth Centre Hotel, Portsmouth.
Friday 7th July - 1 p.m. - 6 p.m.
Saturday, Sunday, Monday 8th, 9th, 10th July - 10 a.m. - 6 p.m.

Look forward to seeing you there!
RICHARD W. BARSTEW
Drakewalls House, Drakewalls, Gunnislake, Cornwall, England.
Tel. No. Gunnislake 83281 (STD 0822) V.A.T. No.: 132-7852-57

ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

AUGUST 1978

1. ALMANDINE GARNET. Zillertal, Tyrol, Austria. Select lustrous deep reddish well-formed crystals to over 1/2" in size scattered on and embedded in chlorite schist. 2½x2½x1 1/4". £7.00

2. ALVITE. Koekskul, Arendal, Norway. Small dark brownish resinous masses scattered in pinkish feldspar with blackish plates of biotite mica. 2x2". £1.50p.

3. APATITE. Panasqueira, Beira-Beixa, Portugal. Choice transparent light greenish sharp hexagonal crystals to 1/2" in size richly scattered over crystallised muscovite mica matrix. 2½x2½x1 1/4". £14.00.

4. APOPHYLLITE. Poona, Nr. Bombay, India. Specimen A: Choice lustrous creamy-white sharp crystals to 1/2" in size thickly intergrown on matrix with a little creamy radiated Laumontite. 2½x2½x2". £8.00. Specimen B: Fine sharp translucent creamy-white crystal 1½" in size perched on matrix with a little creamy crystalised Haudlandite. 2x1½x1½". £6.50p.

5. APOPHYLLITE. Usti uber Labem, Bohemia, C.S.S.R. Lustrous creamy-white sharp crystals mostly around 4-5 mm in size completely covering basalt matrix. 4x3x1 1/4". £5.50p.

6. ARAGONITE. Rowrah, West Cumberland. Fine creamy-white sharp spear-like crystals to 1/2" in length intergrown and free-standing on limonitic matrix. 3½x1½x1 1/4". £5.50p.

7. AXINITE. Botallack Head, St. Just, Cornwall. Select bright sharp clove brown well-terminated single crystals, ranging in size from 1/2-1". Priced according to size and perfection from 0.40p. to 1.25p each.

8. AZURITE. Tsumeb, Otavi, S.W.Africa. Select blue well-formed terminated tabular crystals to 1/2" in length intergrown and free-standing on a 2½x2" area of cellular matrix, with other crystals scattered in cavities. There is a little crystalline green Malachite scattered in areas of the specimen. 5x3½x2½". £6.00.

9. AZURITE. Crow Creek, N.S.Wales, Australia. Bright blue flattened radiated crystals richly covering a creamy sandstone matrix with odd spots of green malachite. Colourful specimen. 2x2x1". £6.00.

10. BARYTES. Wetgrove Mine, Aysgarth, Yorkshire. Specimen A: Select lustrous creamy-white chisel-like crystals to 1/2" in size free-standing on and completely covering matrix. 3x2½x1½". £7.00. Specimen B: Fine pale bluish transparent chisel-like crystals to 1" in size covering matrix. 3x1½". £4.50p.

11. NATIVE BISMUTH. Schneeberg, Saxony, Germany. Silvery-grey metallic crystalline masses associated with a little quartz and small sharp silvery crystals of Chloanthite. 2½x1½x1". £13.00.
12. **BOTALLACKITE.** Levant Mine, Pendeen, Cornwall. Specimen A: Light green lustrous well-formed crystals to 2 mm in size richly scattered on chalcocite/quartz/hematite veinstuff with thin light blue micro crystallised crusts of Connellite in places. 3x2x2", £22.00. Specimen B: Light green well formed crystals to 2 mm in size scattered on hematite matrix. 1x1", £4.50p.

13. **BOULANGERITE.** Mina Noche Buena, Zacatecas, Mexico. Metallic silvery-grey needle-like crystals richly scattered on and infilling cavities in calcite/pyrite veinstuff, with odd well formed Pyrites crystals in places. 4x1x1", £7.00.

14. **CALCITE.** Blackdane Mine, Weardale, Co. Durham. Select creamy translucent sharp "nail-head" crystals to nearly 1" in size intergrown and free-standing on matrix. Very attractive specimen. 3½x2½x1", £7.00.

15. **CARNOTITE.** Gould Mine, Fall River Co., S. Dakota, U.S.A. Bright yellow rich crystalline crust covering sandstone matrix. 3x1½x1½", £5.50p.

16. **CASSITERITE.** Storey's Creek, Tasmania, Australia. Specimen A: Very choice and sharp lustrous black single crystal with minor muscovite mica around it's base. 1x½x½", £17.00. Specimen B: Choice lustrous black large sharp composite crystal. 1½x1", £14.00.

17. **CASSITERITE.** Wheal Kitty, St. Agnes, Cornwall. Specimen A: Sharp lustrous deep brown crystals to 5 mm in size richly scattered in a 3½x2" cavity in cellular chlorite/cassiterite/quartz veinstuff, with smaller cavities also lined with crystals. 4x3x2½", £22.00. Specimen B: Lustrous dark brown sharp crystals to 6 mm in size richly lining cavities in chlorite/cassiterite/quartz veinstuff. 2½x2½x1", £11.00.

18. **CASSITERITE.** Zinnwald, Bohemia, C.S.S.R. Select lustrous blackish sharp twinned single crystals and small crystal groups ranging in size from ½-1". Priced according to size and perfection from £1.25p to £4.50p each.

19. **CASSITERITE.** Scorrier, Cornwall. Very rich light brown crystalline masses associated with milky quartz and a little chlorite. An old label is attached to the specimen. 3½x2½x1½", £6.50p.

22. **CHALCEDONY replacing OCTAHEDRAL FLUORITE.** Wheal Mary Ann, Menheniot, Cornwall. Specimen A: Select creamy-white sharp octahedral fluorite crystals to over ½" in size completely replaced by creamy chalcedony, intergrown on massive chalcedonic quartz matrix. Unusually sharp replacement. 3x3x2", £8.00. Specimen B: Creamy-white replaced octahedral crystals to 1 cm in size thickly intergrown on matrix. 3x2x1", £4.50p.

23. **CHALCEDONITE.** West Wheal Basset, Illogan, Cornwall. Well formed skeletal hexagonal crystals partially altered to bornite, and mostly around 3-4 mm in size, richly scattered on and lining cavities in cellular chlorite/quartz veinstuff. 4½x3x2", £14.00.

24. **CHALCOPRyne.** Mt. Wellington Mine, Twelveheads, Cornwall. Iridescently tarnished small sharp crystals to 3 mm in size scattered on matrix with a little quartz. 2½x1½x1", £1.50p.

26. **META-CINNABAR.** New Almaden, Santa Clara Co., California, U.S.A. Select lustrous blackish sharp crystals to 3 mm in size very richly covering quartzose matrix. Very rich example of this mineral. 3½x2½x2", £18.00.

27. **NATIVE COPPER.** Polcory Mine, Buennap, Cornwall. Rich coppery coloured ramifying crystalline masses with small well formed crystals covering surfaces in places, and with minor fragments of slate attached. 3x2½x1", £8.00.
29. CORNETITE. Cuweha Mine, Ndola, Zambia. Rich crust of minute deep blue sparkling crystals covering matrix with minor malachite in association. 2½x1 x 1", £11.00.

30. CUPRITE. Broken Hill, N.S. Wales, Australia. Deep reddish well formed cubic crystals to 4 mm in size intergrown on one side of a heavy mass of cuprite and crystalline Native Copper. 2½x1 x 1", £6.50.

31. CUPRITE. North Wheel Basel, Illogan, Cornwall. Small sharp pentaheiral crystals to 3 mm in size lining cavities in a cellular mass of cuprite/ quartz. 2x1 x ½", £4.50.

32. DATOLITE. Santa Eulalia, Chihuahua, Mexico. Very choice lime-green sharp transparent crystals to ½" in size forming an intergrown group with odd small blackish crystals of Smallerite in association. 2½x2¼", £23.00.

33. DIOPTASE. Mindouli, Mari River, Zaire. Bright emerald-green sharp crystals to 5 mm in size lining a 1½" cavity in massive crystalline diopside with other smaller cavities also lined with bright crystals. 2x1 x ½", £14.00.

34. DOLOMITE. Thorold, Ontario, Canada. Lustrous light pinkish sharp saffore-shaped rhombic crystals mostly around ½" in size thickly lining a dish-shaped cavity in matrix with odd minute chalcopyrite and BRAVOITE crystals scattered on the dolomite. 3½x3½", £7.00.

35. DUFTITE. Tsurreb, Otavi, S.W. Africa. Rich olive-green intercrystals and crystalline masses associated with glussy twinned large GERUOSITE crystals to ½" in size. 1½x1½x1¼", £6.50.

36. ENARGITE. Quiquirivco, Libertad Dept., Peru. Specimen A: Very fine bright silvery-grey metallic sharp terminated crystals mostly around ¼" in size richly covering matrix with odd silvery-grey well formed TETRAHEDRICE crystals to 5 mm in size in association. 3½x2¼", £23.00. Specimen B: As specimen A, 2¼x1½", £14.00. Specimen C: Bright silvery-grey sharp terminated crystals to ½" in size associated with well formed pyritohedral crystals of pyrites to ½" in size on matrix. 1½x1½", £9.00.

37. EPIDOTE. Montjouet, Val d'Aoste, Piedmont, Italy. Select lustrous olive-green sharp crystals to ¼" in size scattered and intergrown on matrix with tabular greenish crystals and masses of DIOPSIDE. 4½x3¼x1¼", £13.00.

38. FLUORITE. Carovia Mine, Asturias, Spain. Choice transparent to translucent light purpsile sharp cubic crystals with stepped edges, to 1" in size forming a fine intergrown group with odd pale brownish banded Barytes crystals in places. Nice specimen for display. 4½x4x2½", £28.00.

39. FLUORITE. Neave, Chihuahua, Mexico. Select transparent light purplile sharp OCTAHEDRAL crystals to ½" in size associated with sharp large rhombic creamy Calcite crystals to over 1" in size, and odd bressy crystals of Pyrites. 3x2½x1½", £14.00.

40. FLUORITE. Redburn Mine, Rookhope, Co. Durham. Pale pinkish-purple transparent twinned cubic crystals to over ½" in size attractively scattered over intergrown milky pyramidal quartz crystals to ¾" in size. Specimen A: 3½x3x1½", £4.50. Specimen B: 2½x2x1½", £2.50.

42. BALEVA. Blaekdene Mine, Weardale, Co. Durham. Bright silvery-grey metallic modified cube-octahedral crystals to 3" in size scattered on intergrown light purplile Fluorite crystals on massive Fluorite matrix. 2½x2¼x1½", £4.50.

43. GYROLITE. Poona, nr. Bombay, India. Fine creamy large crystalline ball-like masses to over 1" in diameter, forming an intergrown group with creamy-white radiated needly crystalline masses of Okanite and a little calcite in association. 2½x2½x1½", £11.
44. **HEMATITE.** var. MIDN ey ORE. Florence Mine, Egremont, Cumberland. Specimen A: Fine lustrous reddish-brown botryoidal mass of nice shape, with small Specularite and Calcite crystals on the reverse side. 4x2x2", £11.00. Specimen B: Choice lustrous deep reddish-brown dome shaped botryoidal mass; nice specimen for display. 3x2 by 2½" high. £6.50p.

45. **HEMIMORPHITE.** La Comaralda Mine, Chihuahua, Mexico. Light turquoise-blue lustrous botryoidal mass covering a cellular matrix. 2½x1½", £3.50p.

46. **HESSONITE GARNET.** Val d’Ala, Piedmont, Italy. Lustrous bright orangey sharp crystals to 3 mm in size richly covering matrix with a little creamy Apatite and greenish Clinohlore in association. 2½x2x1", £9.00.

48. **HUEBERNITE.** Posta Buena, Peru. Specimen A: Very choice lustrous deep brownish sharp terminal tabular elongated crystals forming a crystal group in parallel growth, with sharp elongated Quartz crystals to ¼ in size encrusting one side. 4" long by 1½", £33.00. Specimen B: Very choice radiated cluster of elongated tabular lustrous deep brownish tabular terminated crystals. 3" long by 1x1", £24.00. Specimen C: Select lustrous deep brownish sharp tabular terminated crystal with parallel growth and minute pyrites crystals scattered on one side. 2½" long by ½", £14.00. Specimen D: As specimen C, 2" long by ½", £8.00. Specimen E: Select cluster of lustrous reddish-brown terminated crystals in parallel growth, with a little quartz on one side. 1½" long by ½", £4.50p. Specimen F: Select single crystals and clusters, some with minor quartz attached. Each approx 1½" long, £1.75p each.

49. **HUTCHINSONITE.** Quiruvilca Mine, Libertad Dept., Peru. Fine sharp deep reddish-brown rod-like crystals to 3 mm in length scattered on matrix with odd well formed orangey crystals and crystal masses of Orpiment. 2½x1½x1½", £3.00.

51. **LEGENDITE.** Mina Ojuela, Durango, Mexico. Specimen A: Bright yellowish sharp crystals to 4 mm in size scattered in areas on both sides of limonite matrix with a little Smithsonite in association. 2½x1½", £13.00. Specimen B: Choice bright yellowish sharp crystals to 5 mm in size scattered and intergrown on both sides of cellular matrix. 1½x2", £6.50p. Specimen D: Small bright yellowish sharp crystals scattered on both sides of matrix. 1½x1½", £4.50p.

54. **MALACHITE.** Laurium, Attica district, Greece. Bright green needly crystals lining cavities in dark brown limonitic matrix. 2x2", £4.50p.

55. **MENDIPITE.** Mendip Hills, Somerset. Specimen A: Rich creamy to pinkish divergent crystalline mass 1½x2" In size embedded in creamy-white platy Hydrocarbonte in blackish pyrolusite matrix. 2½x2½"x1½", £22.00. Specimen B: Very rich pure divergent pinkish to creamy pure mass. 1½x1¼", £14.00. Specimen C: Rich divergent creamy to pinkish mass 1½ in size embedded in calcite/pyrolusite matrix. 1½x1¼", £8.00. Specimen D: As specimen C, with mendipite mass 1x½", overall size 1½x1½", £5.50p.

56. **MIMETITE.** Mexico Mine, Caldbeck Fells, Cumberland. Specimen A: Select bright orangey barrel-like crystals to 5 mm in size thickly intergrown on quartz matrix. 1½x1½x1½", £6.50p. Specimen B: Lustrous yellowish-green sharp rounded barrel-like crystals to 4 mm in size intergrown on a ½" area on cellular quartz. 2½x1½", £3.25p.

57. **MIMETITE.** Diggith Mine, Caldbeck Fells, Cumberland. Lustrous greenish sharp barrel-like crystals mostly around 2-3 mm in size thickly covering cellular quartz matrix. 2x2x1½", £3.50p.

58. **MOTTREMAITE.** Peraldos, Chihuahua, Mexico. Specimen A: Bright sparkling brown sharp platy crystals to 3 mm in size thickly encrusting altered limestone matrix. 2½x2", £6.50p. Specimen B: Small bright brown sharp crystals covering matrix. 1½x1½x1½", £2.50p.
59. OLIVENITE. Wheal Gorland, St. Day, Cornwall. Specimen A: Choice bright dark olive green crystals lining cavities in milky quartz with a ½ inch diameter radiated mass of the 'wood olivenite' variety. 3x2½x2½", £11.00. Specimen B: Fine bright olive green small sharp crystals lining cavities in cellular quartz. 3x2½x1½", £4.75p.

60. OSWALITE. Mt. Arci, Sardinia. Sharp blackish to orangy crystals mostly around 1-2 mm in size scattered in cavities in rhyolite matrix. Specimen A: 2x2½", £4.75p. Specimen B: 1¼x1¼", £2.75p. Specimen C: 1x1", £1.25p.

1. PARACANITE. Levant Mine, Pendeen, Cornwall. Small sharp deep green crystals covering areas of quartz/chalccite/pyrite veinstuff. 1½x1½x½", £3.25p.

72. PREHNITE. Boylstone Qwy., Barmhead, Renfrew, Scotland. Select apple-green lustrous silky botryoidal crystalline mass lining a ⅛" cavity in matrix. 2⅛x1½x1", £1.25p.

73. PYRARGYRITE. St. Andreasberg, Harz, Germany. Select lustrous deep red sharp crystals to 5 mm in size intergrown in cavities in cellular quartz. 1½x1½x½", £3.50p.

74. PYRITES. Quiruvilca, Libertad Dept., Peru. Specimen A: Fine very bright sharp pyritohedral crystals to 1" in size forming an intergrown group. 4½x3½x1½", £4.00. Specimen B: Fine very bright sharp pyritohedral crystals to ⅜" in size forming an intergrown group. 4x3x2", £2.00. Specimen C: Fine very bright sharp pyritohedral crystals to ⅝" in size forming an intergrown group with odd small dark brownish sphalerite crystals scattered in places. 3½x2½x1½", £15.50p. Specimen D: Choice very bright sharp pyritohedral crystals to over ⅞" in size forming an intergrown group. 2½x1½x1", £7.00. Specimen E: As specimen D, 2½x1½x1", £5.50p.

75. PYRITES. Carn Brea Mine, Illogan, Cornwall. Small sharp bright brassy octahedral crystals richly scattered over lenticular light brown Siderite crystals covering quartz matrix. 2x2¼x⅜", £3.25p.

76. PYROCHLOR. St. Lawrence Mine, Oka, Quebec, Canada. Sharp lustrous brownish octahedral crystals to 3 mm in size scattered in a creamy matrix. 2x1½x1", £4.50p.

77. PYROMORPHITE. Mine les Forges, Creuse, France. Select lustrous dark olive coloured interlocking mass of sharp elongated hexagonal crystals to ⅜" in size, with a bright yellow spot of Mimetite on the terminations of many of the crystals. 1x1½x½", £23.00.

78. PYRRHOTITE. Santa Eulalia, Chihuahua, Mexico. Specimen A: Select dark brassy sharp hexagonal crystals to over ¾" in size forming an intergrown group with odd bright blackish Sphalerite crystals scattered on the pyrrhotite crystals. 3⅝x⅝x⅝", £8.00. Specimen B: Select bright brassy large composite hexagonal crystal with a little light brown siderite encrusting one side, together with odd crystals of pyrites, sphalerite and calcite. 1½x1½x1", £6.50p. Specimen C: Bright brassy well formed hexagonal crystals to ⅝" in size scattered on thin quartz crystals with odd cubic crystals of pyrites in association. 1½x1½x1", £2.75p. Specimen D: Select well formed single hexagonal crystals and crystal groups, some with minor crystallised sphalerite or siderite in association. Each approx 1x1" in size, £1.50p each.

79. RHODOCHROSITE. Inadurashi Mine, Hokkaido, Japan. Choice lustrous light pink botryoidal mass completely covering quartz matrix, with odd well formed bright brassy Pyrites crystals intergrown in places. Fine specimen for display. 8x5x2", £44.00.

80. RHODOCHROSITE. Moanda Mine, Moanda, Gabon. Lustrous transparent sharp rose-pink crystals mostly around 2-3 mm in size thickly encrusting a blackish pyrolusite matrix. 2½x2½x1½", £16.00.

81. ADITLE. Arendal, Norway. Specimen A: Sharp deep reddish-brown lustrous sharp crystals to 4 mm in size richly scattered in cavities in chlorite/calcite matrix. 2x2½", £11.00. Specimen B: As specimen A, 1½x1½x1½", £8.00.

82. SCHELLEITE. Tong Who, Chugungangkuo Prov., Korea. Select lustrous light brown translucent octahedral crystal 1 cm in size implanted on milky quartz with bright grayish metallic hexagonal crystals of MOLYBDENITE to over ¼" in diameter. 2½x1", £13.00.

83. SCORODITE. Prince of Wales Mine, nr. Callington, Cornwall. Small sharp bright olive coloured crystals lining a ¼" cavity in matrix. 2¼x1½x1", £4.50p.
84. NATIVE SILVER. Cobalt, Ontario, Canada. Terraced silver hackly masses and wires intergrown with calcite. Specimens approx 2x2" in size, £2.25p each.

85. SKUTTERUDITE. Ecu Azzar, Morocco. Well formed bright silvery crystals to 2" in size intergrown on massive skutterudite. 2x1x1"", £6.50p

86. SMITHSONITE. Toumab, Otavi, S.W. Africa. Sharp transparent pale brownish crystals to 4 mm in size encrusting both sides of intergrown Galena crystals. 1x1x1", £4.50p

87. SPHALERITE. Force Greg Mine, nr. Keswick, Cumberland. Lustrous blackish sharp crystals to 3" in size thickly intergrown on matrix with a little light brownish Siderite. 5x3x2", £9.00

88. SPHALERITE. Mid Continent Mine, Kansas, U.S.A. Bright sharp blackish crystals to over 2" in size richly scattered over matrix with numerous small brassy CHALCOPYRITE crystals. 3x3x1½", £4.50p

89. SPHALERITE. Casapalca, Junin Prov., Peru. Very large lustrous deep brownish sharp crystals to 12" in size intergrown on matrix with odd well formed silvery-gray TETRAHEDRITE crystals to ½" in size, and a little quartz and pyrites. 4½x2x1½", £33.00

90. SPHEN. Kragero, Telemark, Norway. Well formed lustrous dark brown crystal over 1" in size embedded in feldspar matrix. 3x1½x1½", £5.50p.

91. STANNITE. Wheal Jane, Kea, Cornwall. Rich metallic gray masses with minor golden chalcopyrite in association. Specimen A: 2½x2½x1½", £3.50p. Specimen B: 2½x4x1", £2.75p

92. STILBITE. Skookumchuck Dam, Washington, U.S.A. Select lustrous creamy-white sharp sheafs of crystals to 1½" in length forming an intergrown group. 3x2½x1½", £7.00

93. TETRAHEDRITE. Kaprik, Rumania. Sharp silvery-gray tetrahedral crystals to 5 mm in size associated with slightly milky quartz crystals covering cellular quartz matrix. 2½x1½", £8.00

94. TETRAHEDRITE. Gredie Mine, nr. Padstow, Cornwall. Rich silvery-gray masses in quartz with a little siderite. 2½x2x1½", £2.50p

95. THERMODYN. Gjellebekk, Buskerud, Norway. Rich creamy-white fibrous mass on matrix. 1x1½x1", £1.50p

96. TILASITE. Langban, Wasmund, Sweden. Rich flesh-pink mass. 2½x1x1", £1.75p

97. TOPAZ. Ouro Preto, Minas Gerais, Brazil. Select golden translucent elongated well formed and terminated single crystals. Each approx 1-1½" in length, £2.50p each.

98. TORBERNITE. Mine Mois-Noir, Loire, France. Choice bright green well formed tabular crystals to ½" in size intergrown on areas of matrix. 2x1½x1", £14.00

99. TOURMALINE var. SUGARITE. Palu Queen Mine, San Diego Co., California, U.S.A. Specimen A: Fine mostly transparent well formed and terminated greenish grading to bright pink single crystal, ½" long by ½x½" across the axis, £28.00. Specimen B: Bright pinkish well formed and terminated single crystal, ½" long by ½x½" across the axis, £20.00

100. TOURMALINE. Bovey Tracey, Devon. Lustrous bright black well formed crystal associated with a little quartz. 1x1", £3.25p

101. VIVANITE. Blackbird Mine, Cobalt, Idaho, U.S.A. Bright indigo-blue tabular crystals implanted in radiated groups to 1" in size on pyritic matrix. 3½x2x1½", £11.00

103. WOLFRAMITE. Panasqueira, Beira-Baixa, Portugal. Select bright black well formed and terminated large tabular crystal with others in parallel growth, and with minor small Pyrites crystals scattered in place. 2½x1x1½", £44.00

ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitution, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

SEPTEMBER 1978

1. ADULARIA. Val Cristalline, Graubunden, Switzerland. Fine sharp lustrous creamy crystals to over 1" in size intergrown on matrix with a little greenish Chlorite. 2½x2½x1", £7.00

2. ALBITE. Branchville, Connecticut, U.S.A. Lustrous creamy well formed crystals to 1 cm in size forming an intergrown mass with an elongated terminated mostly clear QUARTZ crystal ½" in length lying on the surface. 2¾x1½x1", £2.50p

3. ALTAITE. Hilltop Mine, Dona Ana Co., New Mexico, U.S.A. Rich tarnished metallic masses scattered in matrix. 2½x1½x1", £8.00

4. ANATASE. Prenteg, nr. Tremadog, Caernarvonshire, N. Wales. Sharp lustrous reddish-brown crystals to 3 mm in size scattered on matrix with a little crystallised Albite & Quartz. Specimen A: 2½x1½x1¼", £5.50p. Specimen B: 1¼x1½", £3.25p

5. APATITE. Carrock Mine, Carrock Fell, Cumberland. Lustrous bright greenish well formed elongated hexagonal crystals and crystal sections to ½" in length intergrown on one end of milky quartz matrix. 1½x1¼", £2.50p

6. APATITE variety FRANCOLITE. Levant Mine, Pendeen, Cornwall. Fine lustrous golden brown sharp hexagonal crystals mostly around 2-4 mm in size thickly encrusting or scattered over matrix. Specimen A: 3½x2½" with the crystals completely covering the matrix, £16.50p. Specimen B: 2½x2½x1¼" with the crystals covering most of the surface, £11.00. Specimen C: 2½x2" with the crystals richly dotted over matrix, £8.00. Specimen D: 1½x1½" with the crystals intergrown in areas on the matrix, £4.50p. These specimens are the best examples of this variety of Apatite yet found in Cornwall.

7. APOMMONITE. Poona, nr. Bombay, India. Select transparent to translucent intergrown group of sharp terminated crystals, with faces to ½" in size. 2½x2½x1½", £9.00

8. ARAGONITE. Rowrah, West Cumberland. translucent creamy sharp elongated spear-like crystals to ½" in length intergrown on fannigious matrix. 2x1¼", £2.50p

9. ARSENOPYRITE. Trepca, Yugoslavia. Fine bright silvery sharp crystals to ½" in size very richly scattered over a dome shaped matrix with milky Quartz crystals and a little Sphalerite and Pyrites. 2½x2½x1¼", £11.00

10. AURICHALCITE. 79 Mine, Gila Co., Arizona, U.S.A. Very attractive turquoise-blue botryoidal crystalline radiated masses with a needly surface, thickly lining a cavity and covering the surface of a cellular matrix. Small sharp clear elongated HEMIMORPHITE crystals are scattered over the surface of the Aurichalcite. 2½x2½x1½", £9.00
11. AXINITE. Roscommon Cliff, nr. St. Just, Cornwall. Lustrous brown sharp large well formed crystals to 1" in size lying flat on matrix. 1½x1", £6.50p

12. AZURITE. Bisbee, Cochise Co., Arizona, U.S.A. Rich bright blue cellular mass with a little brownish limonite, with large cavities lined with lighter blue botryoidal Azurite showing a drusy crystallised surface, and with a little turquoise-blue CHALCOCOLZITE lining some cavities. 3½x2", £23.00

13. AZURITE. Taumeb, Otavi, S.W. Africa. Bright blue well formed terminated crystals to 5 mm in size intergrown on a ½" area of matrix with sharp glassy CERUSSITE crystals. 1x1x1", £3.25p

14. BABBONITE. Lane Dry., Westfield, Massachusetts, U.S.A. Fine lustrous sharp dark bluish-black crystals to 1 cm in size intergrown and free standing on calcite/epidote matrix. 2½x1½x1½", £22.00

15. BARYTES. Frizington, West Cumberland. Lustrous creamy tabular crystals to ½" in size thickly intergrown and covering matrix. 2½x1½x1½", £7.00

16. NATIVE BISMUTH. Hutenberg, Kernten, Austria. Rich silvery metallic crystalline masses scattered in siderite matrix. 2x1½x1½", £4.50p

17. BORONITE. Dolcoath Mine, Camborne, Cornwall. Rich attractive iridescently tarnished masses with a little golden chalcopyrite in association. Specimens approx 1x1", £0.60p each.

18. BREUSTERITE. Whitesmith Mine, Strontian, Argyllshire, Scotland. Specimen A: Rich crust of sharp transparent crystals to 3 mm in size completely covering matrix. 3½x2½x1½", £7.50p. Specimen B: Fine transparent sharp crystals to 5 mm in size thickly encrusting matrix. 2x2x1", £6.50p. Specimen C: As specimen B, 1½x1½", £2.50p. Specimen D: As specimen B, 1x1x1", £1.50p

19. BROCHANTITE. Bisbee, Cochise Co., Arizona, U.S.A. Select bright green cellular mass of small well formed crystals with a little limonite and quartz. 2½x1½x1½", £5.00

20. BROCHITE. Prenteg, nr. Tremadog, Caernarvonshire, N. Wales. Specimen A: Very rich lustrous reddish-brown crystals and crystal sections to 1 cm in size scattered amongst and partially enclosed in an interlocking mass of milky quartz crystals. 2x2½x1½", £16.00. Specimen B: Sharp terminated lustrous reddish-brown crystals and crystal sections scattered in cavities and embedded in dolerite/quartz matrix. 1½x1½x1½", £7.00

21. CABERITE. Laurium, Attica district, Greece. Fine green sharp crystals and crystal sheaves infilling small cavities in limestone/calcite matrix. 1½x1½x1½", £3.50p

22. CALAVERITE. Great Boulder Mine, Kalgoorlie, W. Australia. Specimen A: Very rich lustrous bronzy metallic mass 1½x1" in size on quartzose matrix. 2x1½x1", £33.00. Specimen B: Rich bronzy metallic mass 1½x1" on matrix. 1½x1", £14.00

23. CALCITE. St. Andreasberg, Harz, Germany. Select transparent to translucent clear to creamy coloured flat terminated hexagonal crystals to ½" in diameter, stacked one-upon-another to form an intergrown group. 2½x2½x1½", £8.00

24. CALCITE. Blackdene Mine, Weardale, Co. Durham. Sharp creamy nail-head crystals to 8 mm in size thickly encrusting an intergrown group of sharp cubic light purple FLUORITE crystals to 1" in size. 3x2½", £4.75p

25. CARPHOLITE. Schlaggenwald, Bohemia, C.S.S.R. Rich golden silky radiated masses in quartz with a little fluorite. 2x1½", £2.50p

26. CASSITERITE. Dolcoath Mine, Camborne, Cornwall. Very rich heavy lustrous brownish mass with a little quartz and hematite, showing elongated 'sparable' habit crystals embedded in places. 2x2½", £2.50p

27. CATAPLEITITE. Hedrum, Vestfold, Norway. Rich pinkish masses in pegmatite associated with elongated deep greenish AGGIRINE crystals. 2½x2½x1½", £2.50p

28. CHALCOCITE. Levant Mine, Pendeen, Cornwall. Specimen A: Fine bright silvery-grey metallic sharp crystals to ½" in size scattered over cellular quartz/arsenopyrite matrix. 2½x2", £11.00. Specimen B: Fine bright silvery-grey crystals to 4 mm in size scattered over cellular matrix. 2x1½", £8.00. Specimen C: Greyish well formed platy crystals to 4 mm in size intergrown in areas on quartzose matrix. 1½x1½", £3.25p
30. CHALCOPRyTIE. Castro Virreyne Mine, near Lima, Peru. Specimen A: Fine bright golden well formed crystals, some with a slight iridescent tarnish, to over 1/2" in size richly intergrown on quartz matrix with sharp very bright silvery-grey TETRAHEDRITE crystals to 1 cm in size, a little Pyrites and elongated milky Quartz crystals in association. 3x2x1", £22.00. Specimen B: Fine bright golden sharp crystals with an attractive iridescent tarnish, to 1/2" in size associated with elongated sharp terminated milky quartz crystals to 1" in length, and minor crystallised Tetrahedrite and pyrites. 3x2x1", £14.00. Specimen C: Bright golden sharp crystals to over 1/2" in size associated with elongated clear terminated Quartz crystals to 1/2" in length and a little well crystallised Tetrahedrite. 2x1x1", £8.00. All these specimens are very attractive for display.

31. CHLORANTHITE. Neideachlema, Saxony, Germany. Select bright silvery well formed crystals to 1/2" in size forming an intergrown mass with crystalline chloranthite and a little calcite. 2x2x1", £11.00.

32. CROCOITE. Rec Leqd Mine, Dundas, Tasmania, Australia. Specimen A: Bright orange elongated rod-like crystals to 1" in length richly spanning cavities and intergrown on cellular brown limonitic matrix. 2x1x1", £14.00. Specimen B: Rich bright orangey-red interlocking mass of rod-like crystals. 1x1", £5.50p.

34. CUPRITE. Nizhne Tagilsk, Ural Mts., Russia. Very rich deep reddish mass associated with bright greenish CHRYSOCOLLA and brownish Malachite. 2x2x1", £6.50p.

35. DANBURITE. Charcas, San Luis Potosi, Mexico. Very choice sharp elongated transparent to translucent terminated crystals to 1/2" in length free standing all over matrix, with a little sparkling drusy crystallised quartz in places. Fine specimen for display. 4x3x2", £28.00.

37. ENARGITE. Quiruvilca, Libertad Dept., Peru. Specimen A: Large crudely formed crystals to 1/2" in size scattered on bright golden sharp intergrown pyritohedral PYRITES crystals to 1 cm in size, with numerous minute sharp bright silvery-grey TETRAHEDRITE crystals scattered in places. 4x2", £8.00. Specimen B: Crudely formed large intergrown crystals to 1 cm in size frosted with minute silvery-grey Tetrahedrite crystals. 2x2x1", £4.50p.
44. EOSPHORITE. Aracuia, Minas Gerais, Brazil. Specimen A: Sharp golden-brown elongated terminated crystals to 3 mm in length very richly scattered over and lining cavities in intergrown rose-quartz crystals. 2x1½x1½", £17.00. Specimen B: As specimen A, 1½x1½x1½", £5.00.

45. FLUORITE. Near Ark, Central U.S.A., Specimen A: Sharp golden-brown elongated terminated crystals to 5 mm in length very richly scattered over and lining cavities in intergrown rose-quartz crystals. 2x1½x1½", £17.00. Specimen B: As specimen A, 1½x1½x1½", £4.50.

46. FLUORITE. Blackdene Mine, Weardale, Co. Durham. Specimen A: Transparent to translucent light purplish cubic crystals to 1" in size thickly intergrown on both sides of matrix with odd bright brassy small sharp Chalcopyrite crystals scattered in places. 4x3½x2½", £13.00. Specimen B: Large transparent light purplish cubic FLUORITE crystals to 1" in size intergrown and scattered over both sides of quartz matrix, with odd minute brassy Chalcopyrite crystals in places. 3x2x1½", £8.00.

47. FLUORITE. Heights Mine, Weardale, Co. Durham. Bright green transparent crystals to 1" in size, intergrown on matrix with a little drusy quartz. 1½x1½x1½", £4.50.

48. GALERITE. Blackdene Mine, Weardale, Co. Durham. Very choice bright silvery-grey sharp cubic crystal 1½x1½ in size implanted on a matrix of intergrown transparent light purplish cubic FLUORITE crystals to nearly 1" in size. Fine specimen for display. 5½x3½x3½", £10.00.

49. GALERITE. Clausthal, Harz, Germany. Metallic grey well formed modified cubic crystals to 1" in size scattered over matrix with a sprinkling of small lustrous creamy Dolomite crystals. 3x2x1", £8.00.

51. GYROLITE. Poona, near Bombay, India. Fine silky tan coloured crystal 'balls' mostly around 1 cm in diameter, richly intergrown and scattered over basalt matrix with small clear Quartz crystals, silky white Okenite and a little pale greenish Prehnite. Nice display specimen. 5x4½x2", £17.00.

52. HEMIMORPHITE. Santa Eulalia, Chihuahua, Mexico. Choice lustrous transparent sharp elongated terminated crystals to ¾" in length thickly encrusting the surface and lining large cavities in matrix. 3½x2½x2½", £11.00.

53. HEMIMORPHITE. Broken Hill, Zambia. Small sharp well formed crystals richly scattered over a large reticulated creamy CERUSITE crystal mass. 2½x1½x1½", £5.50p.

56. KINOITE. Christmas Mine, Gila Co., Arizona, U.S.A. Bright blue small crystalline masses on matrix with small clear Apophyllite crystals in association. 1½x½x1½", £4.50p.

57. NATIVE LEAD. Langbarg, Wermland, Sweden. Very rich greyish sheety masses on and in Dolomite/manganophyllite matrix. 4x2½x1½", £18.00.

58. LEPIDOLITE. Little 3 Mine, Ramona, California, U.S.A. Select pale lilac coloured well formed crystal book. 1½x1½x1", £2.50p.

60. MALACHITE. Tsumeb, Otavi, S.W. Africa. Choice silky bright green botryoidal mass with a little crystallised calcite. 2½x2½x1½", £4.50p.

61. MARGASITE. Panasqueira, Beira-Belixa, Portugal. Choice bright sharp banded crystals to over 1" in size intergrown on arsenopyrite matrix with odd sharp silvery ARSENOPYRITE crystals and a little creamy Calcite. 2½x2½x1½", £14.00.

63. Mimetite. Wheal Unity, Gunnin, Cornwall. Lustrous brownish elongated hexagonal crystals to \( \frac{1}{4} \) in length scattered over quartose matrix. 2x1\( \frac{1}{4} \)x1", £4.50p.

64. Mimetite variety Campylite. Drygill Mine, Caldbeck Fells, Cumberland. Lustrous orangey to light green well formed barrel-shaped crystals to \( \frac{1}{4} \) in size intergrown on matrix and partially overgrown with bright yellow needle Mimetite crystals. 2x1\( \frac{1}{4} \)x1\( \frac{1}{2} \), £5.00.

65. Mottramite. Teumeb, Otavi, S.W. Africa. Minute sparkling blackish crystals thickly encrusting dark brownish Deschloise crystals forming an intergrown group. 1\( \frac{1}{2} \)x1\( \frac{1}{2} \)x1", £4.50p.

66. Natrolite. Dean Qry., St. Keverne, Lizard, Cornwall. Creamy elongated crystals, some being well terminated, to \( \frac{1}{4} \) in length intergrown on matrix and partially altered and frosted with micro crystals of Stilbite. 1\( \frac{1}{4} \)x1\( \frac{1}{2} \)x1", £2.50p.

67. Olivenite. Phoenix Mine, Linkinhorne, Cornwall. Small greenish crystals lining cavities in ferruginous matrix. 2x1\( \frac{1}{4} \)x1", £3.50p.

68. Orthoclase. Buro Preto, Minas Geraes, Brazil. Very large and well formed creamy twinned crystal with a little milky quartz attached on one side, and with numerous rod-like clear greenish tourmaline crystals and crystal sections scattered in places. Very choice specimen for museum display. 6x5x5", £33.00.

69. Paralaurionite. Mendip Hills, Somerset. Specimen A: Light yellowish masses embedded in a solid mass of greyish Native arsenic. 3x1\( \frac{1}{4} \)x1\( \frac{1}{2} \), £13.00. Specimen B: As specimen A, 3\( \frac{1}{2} \)x1\( \frac{1}{2} \), £5.50p.

70. Plattnerite. Mina Bijuella, Mapimi, Durango, Mexico. Small sparkling black crystals richly covering brownish limonitic matrix with a little calcite. 2\( \frac{1}{4} \)x1\( \frac{1}{2} \)x1", £4.50p.

71. Proustite. Stribro, Bohemia, C.S.S.R. Bright red crystals and masses scattered in cavities in a solid mass of greyish Native arsenic. 3x1\( \frac{1}{4} \)x1\( \frac{1}{2} \), £13.00.

72. Pseudomalachite. Bisbee, Cochise Co., Arizona, U.S.A. Bright green cellular crystalline masses covering calcite crystals on matrix. 2\( \frac{1}{4} \)x1", £3.50p.

73. Pyrites. Rio Marina, Isle of Elba, Italy. Specimen A: Select bright brassy sharp large pyritohedral crystals to \( \frac{1}{4} \) in size implanted on blackish specular hematite matrix with smaller crystals attached. 3x2\( \frac{1}{4} \)x1\( \frac{1}{2} \), £11.00. Specimen B: Fine bright brassy sharp pyritohedral crystals to 3 mm in size intergrown on matrix. 3x2\( \frac{1}{4} \)x1\( \frac{1}{2} \), £8.00. Specimen C: Bright brassy pyritohedral crystals to 1" in size forming an intergrown group with minor matrix attached. 2\( \frac{1}{4} \)x1\( \frac{1}{2} \)x1", £4.50p.

74. Pyrites. Soria, Spain. Select bright brassy very sharp single cubic crystals. Each approx 2\( \frac{1}{4} \)x2\( \frac{1}{4} \)x2\( \frac{1}{4} \) in size, £5.25p each.

75. Pyrites replacing Pseudomorphite. Wheal Jane, Mea, Cornwall. Hexagonal well formed pyrrhotite crystals to 8 mm in size replaced by light brassy Pyrites, intergrown on one side of matrix with minor crystallised chalcopyrite in association. 1\( \frac{1}{4} \)x1\( \frac{1}{2} \), £6.50p.

76. Pyromorphite. Vessel, Massif Central, France. Bright grass green small crystals thickly encrusting quartz matrix. 3\( \frac{1}{2} \)x3x1\( \frac{1}{2} \), £13.00.

77. Pyromorphite. Roughtengill Mine, Caldbeck Fells, Cumberland. Specimen A: Fine bright yellowish-green sharp hexagonal crystals to 5 mm in size scattered and intergrown on cellular matrix. 2x1\( \frac{1}{4} \)x1\( \frac{1}{2} \), £11.00. Specimen B: Bright yellowish sharp hexagonal crystals to 5 mm in size thickly intergrown on matrix. 1\( \frac{1}{4} \)x1\( \frac{1}{2} \), £6.50p.

78. Quartz. Hailmoor Mine, nr. Egremont, Cumberland. Fine sharp transparent slightly smoky doubly terminated crystals to over 1" in size thickly intergrown on hematite matrix with a little platy black Specularite and creamy bladed Barytes on association. 3\( \frac{1}{2} \)x2x1\( \frac{1}{2} \), £8.00.

79. Rhodochrosite. Moanda Mine, Moanda, Gabon. Lustrous rose-red sharp clear scalenohedral crystals mostly around 3-4 mm in size thickly covering blackish pyrolusite matrix, with small black needle Pyrite crystals covering part of the reverse of the specimen. 2x2\( \frac{1}{4} \), £13.00.

80. Scheelite. Wheal Cock, St. Just, Cornwall. Lustrous creamy octahedral crystal sections and masses richly embedded in chlorite veinstuff. 2x1\( \frac{1}{4} \), £5.00.

81. Scordite. Beijneio Mine, Portugal. Small sharp lustrous olive-green crystals lining cavities in milky quartz. 2x1\( \frac{1}{4} \), £2.50p.
82. SMITHSONITE. Copper Canyon, Chihuahua, Mexico. Lustrous large clear well formed rhombic crystals to 1 cm in size thickly intergrown on matrix. $3\times1\times1\frac{1}{2}$, £7.00

83. SEDDYVITE. Swambo, Katanga, Zaire. Specimen A: Very rich crust of small sharp yellowish crystals encrusting matrix. $2\times1\times1\frac{1}{4}$, £33.00. Specimen B; as specimen A, $1\frac{1}{2}\times1\frac{1}{2}$, £14.00

84. SPECULARITE. Brosso Mine, Piedmont, Italy. Bright black platy crystals encrusting matrix and associated with clear slightly milky quartz crystals. $3\times3\frac{1}{2}\times2$, £4.50p

85. SPHALERITE. Wheel Jane, Kea, Cornwall. Bright black sharp crystals to $\frac{1}{4}$ in size scattered on matrix with small clear quartz crystals. $3\times1\frac{1}{2}\times1\frac{1}{2}$, £3.50p

86. SPHALERITE. Threlkeld Mere, Threlkeld, Cumberland. Small bright blackish crystals scattered on druse quartz covering a cellular matrix. $2\times2\times1\frac{1}{2}$, £2.75p

87. SPHALERITE. Trepc, Yugoslavia. Bright black crystal 1x1 cm in size implanted on matrix and associated with elongated milky quartz crystals, brassy pyrites crystals, dreamy rhombic Calcite crystals and druse crystallised dolomite. $3\times1\times1\frac{1}{2}$, £7.00

88. SPHALERITE. Rampgill Mine, Nenthead, Cumberland. Bright black well formed crystals to $\frac{1}{2}$ in size thickly intergrown and covering both sides of matrix and with a little snow-white drusy crystallised quartz in association. $3\times2\times1\frac{1}{2}$, £6.50p

89. STANNITE. Mulberry Mine, Lanivet, Cornwall. Rich tarnished metallic masses associated with milky quartz and a little chalcopyrite. $2\times2\times1\frac{1}{2}$, £3.75p

90. STELLERITE. Grant Co., Oregon, U.S.A. Lustrous translucent creamy fibrous crystalline mass with a botryoidal surface. Specimen A: $2\frac{1}{2}\times1\frac{1}{2}$, £6.50p. Specimen B: $1\frac{1}{2}\times1\frac{1}{2}$, £2.50p

91. STIBICONITE. Knipes Mine, New Cumnock, Ayrshire, Scotland. Rich yellow masses replacing stibnite, associated with silvery-grey Stibnite and quartz. $2\times1\frac{1}{2}$, £1.50p

92. STIBNITE. Knipes Mine, New Cumnock, Ayrshire, Scotland. Very rich bright metallic grey bladed masses with minor quartz. Specimen A: $2\times2\frac{1}{2}\times1\frac{1}{2}$, £3.25p. Specimen B: $2\times1\times1\frac{1}{2}$, £3.50p

93. STIBNITE. William Ford, Tasmania, Australia. Bright silvery-grey dendritic crystals to over $\frac{1}{2}$ in length scattered over light brown crystallised Siderite matrix. $2\times1\frac{1}{2}\times1\frac{1}{2}$, £4.50p

94. TETRAHEDRITE. Castro Virreyna MINE, nr. Lima, Peru. Specimen A: Very choice bright silvery grey sharp crystals to nearly 1 cm in size associated with bright brassy and iridescent Chalcopyrite crystals to 1 cm in size, odd bright Pyrites crystals and light brown translucent Sphealerite crystals to $\frac{1}{2}$ in size, all richly scattered over elongated slightly milky to clear QUARTZ crystals to 1" in length. Very fine display specimen. $5\times4\times2\frac{1}{4}$, £44.00. Specimen B: Choice bright silvery-grey sharp crystals to $\frac{1}{2}$ in size intergrown on a $1\frac{1}{2}$" area - a matrix of elongated milky quartz crystals to over 1" in length, and with bright brassy chalcopyrite and pyrites crystals scattered over the rest of the specimen. $3\times2\frac{1}{2}\times2\frac{1}{2}$, £23.00. Specimen C: Bright silvery-grey sharp crystals to 1 cm in size thickly intergrown on matrix with odd slender quartz crystals and a little pinkish rhombic Rhodochrosite crystals in association. $2\times2\frac{1}{4}$, £17.00. Specimen D: Bright silvery-grey sharp crystals to 8 mm in size scattered and intergrown on both sides of matrix with small needly quartz crystals, pinkish rhombic rhodochrosite crystals and a little pyrites in association. $2\times1\frac{1}{2}\times1\frac{1}{2}$, £13.00. Specimen E: Bright silvery-grey sharp crystals to $\frac{1}{4}$ in size scattered over elongated slightly milky quartz crystals covering matrix. $1\frac{1}{2}\times1\frac{1}{2}$, £7.00

95. VANADINITE. Broken Hill, Zambia. Unusual yellowish-brown pure banded mass with a botryoidal surface. $2\frac{1}{2}\times1\frac{1}{2}$, £4.50p

96. WILLEMITE. Tsaneb, Otavi, S.W. Africa. Fine transparent sharp clear to creamy crystals to 4 mm in size forming a pure cellular intergrown mass. $1\frac{1}{2}\times1\frac{1}{2}\times1\frac{1}{2}$, £6.50p

97. WOLFRAMITE. Hingston Down, nr. Callington, Cornwall. Rich bright blackish blades embedded in quartz/arsenopyrite matrix with small sharp arsenopyrite crystals lining cavities. $2\frac{1}{2}\times2\times1\frac{1}{2}$, £3.25p

98. WULFENITE. Los Lamentos, Chihauhua, Mexico. Specimen A: Choice bright orangey tabular crystals to 1 cm in size richly scattered over creamy crystallised calcite matrix. $3\times2\frac{1}{2}\times1\frac{1}{2}$, £11.00. Specimen B: Bright orangy sharp tabular crystals to 1" in size standing on creamy calcite matrix. $1\frac{1}{2}\times1\frac{1}{2}$, £4.50p. Specimen C: As specimen B, with crystals to $\frac{1}{4}$ in size, $1\frac{1}{2}\times1\frac{1}{2}$, £3.25p

99. ZINKENITE. Wolfsberg, Harz, Germany. Silvery-grey rod-like elongated crystals and crystalline masses scattered over blackish sphalerite on matrix. $3\times1\frac{1}{2}$, £14.00
RICHARD W. BARSTOW
Drakewalls House, Drakewalls, Gunnislake, Cornwall, England.
Tel.No.: Gunnislake 832381
(STD 0822) V.A.T.No.: 132-7852-67

ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

OCTOBER 1978

1. ADULARIA. St. Gotthard; Ticino, Switzerland. Large creamy sharp crystals partially coated with greenish chlorite, forming an intergrown group. Largest crystal is over 1" in size. 2½x2½x1½", £5.50p

2. ALBITE. Binnental, Valais, Switzerland. Choice lustrous translucent creamy large tabular crystal showing parallel growth of its faces. 2¼x2½x¾", £9.00

3. AMBLYGONITE. Montebras, Creuze, France. Solid creamy-white cleavage mass. 2x1½x1½", £3.50p

4. ANATASE. Prenteg, nr. Tremadog, Caernarvonshire, N. Wales. Specimen A: Choice lustrous dark brownish sharp crystals to 4 mm in size richly scattered over matrix. 4x2½x1½", £13.00. Specimen B: Fine sharp lustrous brownish crystals to 3 mm in size associated with creamy sharp ALBITE crystals covering the surface and lining cavities in matrix. 3½x2½x¾", £9.00. Specimen C: Lustrous sharp brownish crystals to 2 mm in size associated with creamy Albite crystals on matrix. 2½x1½x½", £5.50p

5. ANDRADITE GARNET variety MELANITE. San Benito Co., California, U.S.A. Sharp bright black crystals to 4 mm in size richly covering both sides of matrix. 2½x1½x1½", £4.50p

6. ANGLESITE. Broken Hill, N.S. Wales, Australia. Small sharp clear sparkling crystals co,er a reticulated mass of large creamy CERUSSITE crystals. 3x2½x½", £11.00

7. APATITE. Panasqueira, Beira-Beixa, Portugal. Select transparent intergrown cluster of sharp light greenish well formed hexagonal crystals, the largest being 1" in size. 1½x1½x1½", £13.00

9. ARAGONITE. Rowrah, West Cumberland. Select divergent spray of lustrous creamy-white spear-like crystals on brouzy limeonite matrix. Largest crystals over 1" in length. 3x2½x½", £9.00

10. ATACAMITE. Mina la Farola, Copiapo, Chile. Specimen A: Choice bright green sharp radiated crystal sprays richly covering greenish-blue chrysocolla coated matrix. 2½x1½x1½", £11.00. Specimen B: Bright green sharp bladed crystals thickly intergrown on matrix with a little greenish chrysocolla. 2½x1½x1½", £6.50p.

11. AUGITE. Bail Hill, Sanquhar, Dumfries, Scotland. Sharp lustrous well formed greenish-black crystals to ¼" in size partially embedded in brecciated basalt matrix. Specimen A: 3½x2½x1½", £2.25p. Specimen B: 2½x1½x1½", £2.25p

12. AZURITE. Chessy, Rhone, France. Lustrous deep blue crystals, some partially coated and altered to silky green malachite, to ¼" in size scattered and intergrown in a 1½" cavity in limonitic matrix. 2½x2½x½", £11.00
13. **BARYTES.** Wilsons Level, Hilton Mine, Scardale, Westmoreland. Specimen A: Fine and lustrous creamy spear-like crystals mostly around 1 cm in size thickly encrusting calcite matrix. 4½x3×1¼", £13.00. Specimen B: As specimen A, 3x2½x1¼", £6.00. Specimen C: As specimen A, 3x2x1¼", £5.50p. Specimen D: As specimen A, 2½x1¼", £4.50p. All the above specimens are attractive for display.

14. **BARYTES.** Silverband Mine, Dun Fell, Westmoreland. Fine clear sharp terminated tabular crystals to 1" in size forming an intergrown group. 2½x1¼x1¼", £4.50p.

15. **BARYTES.** Shangulowe, Katanga, Zaire. Sharp wedge shaped clear crystals to ¼" in size scattered over deep green botryoidal banded MALACHITE. 1½x1¼x1¼", £5.50p.

17. **BOURONITE.** Julcani Mine, Junin Prov., Peru. Specimen A: Choice bright silvery-grey twinned cog-wheel crystals to 5 mm in size aggregated and scattered over matrix and associated with well formed brownish-black Sphalerite crystals and sharp lustrous milky quartz crystals to ⅞" in size. Attractive specimen. 4⅞x3½x3", £24.00. Specimen B: Sharp silvery-grey twinned cog-wheel crystals to 4 mm in size richly scattered over shiny sharp milky quartz crystals with minor golden crystals of Pyrites. 2½x2½x1¼", £14.00. Specimen C: Sharp silvery-grey twinned cog-wheel crystals to 4 mm in size scattered over milky quartz crystals with minor brownish-black Sphalerite crystals. 2½x2½x1¼", £6.50p.

18. **CALCITE.** Cammock Eales Mine, Weardale, Co. Durham. Specimen A: Select creamy-white sharp platy hexagonal crystals to ⅞" in diameter thickly encrusting quartz matrix with odd small pyrites crystals and lustrous milky pyramidal Quartz crystals in association. Choice specimen for display. 4½x3½x3", £14.00. Specimen B: Sharp creamy-white platy hexagonal crystals to over 1" in size thickly encrusting quartz matrix, with the reverse side of the specimen encrusted with translucent lustrous pyramidal quartz crystals to ⅞" in size. 3½x2½x1¼", £5.50p.

19. **CALCITE.** Tynebottom Mine, Garrigill, Cumberland. Sharp lustrous creamy nail-head crystals to 1¼" in size forming an attractive intergrown group. 3½x2½x1¼", £6.00.

20. **CALCITE.** Baxter Springs, Cherokee Co., Kansas, U.S.A. Fine clear slightly creamy coloured terminated hexagonal crystal ¼" in length implanted on matrix with small creamy dolomite crystals. 1½x1¼x1¼", £3.50p.

21. **CALCITE.** Stank Mine, Ulverstone, Lancs. Sharp lustrous creamy to transparent complexly terminated crystals to ¼" in size thickly covering brownish limonitic matrix. 4½x2½x1¼", £14.00.

22. **CALCITE.** Naica, Chihuahua, Mexico. Creamy-white small sharp spiky crystals aggregated in sheaves and richly covering matrix with small well formed bright brassy striated PYRITES crystals to ¼" in size in association. 3½x2¼x2", £6.50p.

24. **CASSITERITE.** Polbreen Mine, St. Agnes, Cornwall. Lustrous blackish sharp twinned crystals to 4 mm in size thickly encrusting slaty matrix. 2¼x2½x1¼", £8.00.

25. **CASSITERITE.** Weal Rashleigh claywork, St. Blazey, Cornwall. Lustrous light to dark brownish crystals and masses to ⅝" in size scattered on greyish needly tourmaline on quartz/cassiterite veinstuff. 2¼x2½x1¼", £8.00.

26. **CASSITERITE** variety **RUBY TIN.** San Luis Potosi, Mexico. Select cluster of lustrous reddish well formed intergrown crystals to 4 mm in size. This specimen was collected from a fumerole, and is of most unusual occurrence. 2½x1¼", £3.00.

27. **CASSITERITE** variety **ALLUVIAL TIN.** Redmoor, Lanivet, Cornwall. Very rich brownish mass associated with blackish tourmaline and brecciated slate and quartz. Exterior rounded and with an old label attached stating the weight, 3 lbs 10 ozs. Unusually large and rich specimen for a Cornish alluvial deposit. 4⅞x3½x3", £13.00.

28. **CELESTITE.** Girgenti, Sicily, Italy. Select lustrous light bluish elongated terminated crystals aggregated in sprays and covering celestite/sulphur matrix. Sprays are mostly about 1" in size. Good display specimen. 4½x3½x3", £14.00.

29. **CERUSITE.** Log-y-Las Mine, Porthtudygroes, Cardiganshire, Wales. Transparent clear to creamy sharp twinned tabular crystals to ¼" in size intergrown in a ½" cavity in slaty matrix. 2¼x1¼x1¼", £4.50p.
1. COPRISTE. Dransler, Sauerland, Germany. Specimen A: Fine bright golden sharp crystals, some with an iridescent tarnish, to 1/16" in size, thickly scattered over creamy white rock. CRYSTALISED BARITES. 3\(\times\)3\(\times\)1/4", £8.00. Specimen B: As specimen A, with chalcopyrite crystals to 5 mm in size, 3\(\times\)2\(\times\)1/4", £4.50p.

2. CHROME DIOPSIDE. Outokumpo, E. Finland. Lustrous lime-green elongated blade-like crystal masses to 1 1/2" in length embedded in quartz matrix. 3\(\times\)2\(\times\)1/4", £4.50p.

3. CHRYSOCOLLA. Kolwezi, Katanga, Zaire. Lustrous deep greenish glassy mass showing a well banded structure in places. 2\(\times\)2\(\times\)1/4", £4.50p.

4. NATIVE COPPER. Poldory Mine, Guernsey, Cornwall. Tarnished metallic cellular mass with well-formed crystals on the surface and with sharp deep reddish COPRISTE crystals to 4 mm in size dotted over both sides. 2\(\times\)2", £13.00.

5. NATIVE COPPER. Pembroke Mine, near St. Auster, Cornwall. Tarnished coppery hackly sheet with minor fragments of quartz attached and a little greenish Malachite, and with pyramidal impressions of quartz crystals showing on both sides of the copper. 4\(\times\)3\(\times\)1/4", £13.00.

6. CREOBERITE. Mendip Hills, Somerset. Bright black platy crystal masses embedded in one end of creamy calcite matrix. 2\(\times\)2\(\times\)1/4", £4.50p.

7. DUFTITE. Tsumeb, Otavi, S.W. Africa. Rich olive-green sparkling micro crystals and cellular masses associated with large glassy well-formed CERUSSITE crystals. 1\(\frac{1}{4}\)\(\times\)2\(\frac{1}{2}\)\(\times\)1/4", £6.50p.

8. EPIDOTE variety PISTACITE. near Genoa, Italy. Lustrous olive-green sharp crystals mostly around 3-4 mm in size thickly encrusting matrix. 2\(\times\)1/4", £3.25p.

9. FLUORITE. Cammock Eats Mine, Weardale, Co. Durham. Select translucent large purplish single cubic crystal with minor creamy sharp platy hexagonal Calcite crystals on one side, and with a dusting of small brassy pyrites crystals on the reverse side. 3\(\times\)2\(\times\)2", £13.00.

11. GALENA. Castro Virreyna Mine, near Lima, Peru. Unusual very bright metallic grey lenticular shaped crystals to 1 cm in size thickly encrusting a sphalerite/pyrites matrix with small pinkish Calcite crystals in association. 2\(\times\)2\(\frac{1}{2}\)

12. HARMOTONE. Bellsgrove Mine, Strontian, Argyllshire, Scotland. Specimen A: Sharp lustrous creamy-white twinned crystals to 1 cm in size scattered over calcite matrix. 3\(\times\)2\(\times\)1/4", £6.50p. Specimen B: Sharp twinned creamy-white crystals to nearly 1 cm in size intergrown on calcite matrix. 2\(\times\)2\(\frac{1}{2}\)\(\times\)1/4", £4.50p.

13. HEMIMORPHITE. Specimen A: Fine clear sharp terminated tabular crystals to 1 cm in length thickly covering and free standing on limonitic matrix. 3\(\frac{1}{4}\)\(\times\)2\(\frac{1}{4}\)\(\times\)1/4", £7.00. Specimen B: Fine clear elongated terminated tabular crystals to 1 cm in length thickly covering both sides of limonitic matrix. 2\(\frac{1}{4}\)\(\times\)2\(\frac{1}{4}\)\(\times\)1/4", £4.75p. Specimen C: Fine clear sharp tabular crystals to 1" in size thickly encrusting a pipe-like mass of limonite. 2\(\times\)2\(\frac{1}{4}\), £2.75p.

14. HEMIMORPHITE. Lake Jaco, Chihuahua, Mexico. Select lustrous sharp pinkish crystal with smaller crystals attached. 1\(\frac{1}{2}\)\(\times\)1\(\frac{1}{2}\)\(\times\)1/4", £6.50p.

15. GYROLITE. Datecairn, Co. Antrim, N. Ireland. Silky white botrioidal masses and platy crystals covering basalt matrix with odd sharp creamy APHOTYLITE crystals to 1 cm in size in association. 2\(\times\)1\(\frac{1}{2}\)\(\times\)1/4", £3.25p.

48. **Huefnerite.** Pasta Buena, near Lima, Peru. Specimen A: Fine lustrous sharp dark reddish divergent spray of tabular terminated crystals 2" long by \(\frac{1}{2}\)" wide, attached to a group of elongated terminated milky quartz crystals to 1\(\frac{1}{4}\)" in length on quartz matrix. Nice display specimen. 3\(\frac{1}{2}\)\(\times\)2\(\frac{1}{2}\)\(\times\)2\(\frac{1}{2}\)", £23.00. Specimen B: Select lustrous dark reddish-brown crystal sprays, approx 1\(\frac{1}{2}\)\(\times\)1\(\frac{1}{4}\)\(\times\)1\(\frac{1}{4}\)", £4.50 each.

49. **Hydrocerussite.** Mendip Hills, Somerset. Rich creamy-white platy crystalline mass with minor cerussite. 1\(\frac{1}{4}\)\(\times\)1\(\frac{1}{4}\)\(\times\)1\(\frac{3}{4}\)", £2.50.

50. **Hydrizincite.** Parc rhyne, Llanrwst, N. Wales. Very rich snow-white ripple-marked thick crusts covering matrix. Specimen A: 3\(\frac{1}{2}\)\(\times\)2\(\frac{1}{2}\)\(\times\)1", £4.50p. Specimen B: 2\(\frac{1}{2}\)\(\times\)1\(\frac{1}{2}\)\(\times\)1", £2.25p.

51. **Idocrase.** Lake Jaco, Chihuahua, Mexico. Large lustrous sharp terminated yellowish crystals 1\(\frac{1}{4}\)\(\times\)1" in size with a sharp Grossular Garnet crystal 1\(\frac{1}{4}\)\(\times\)1" in size attached. Overall size 1\(\frac{3}{4}\)\(\times\)1\(\frac{1}{4}\)\(\times\)1\(\frac{1}{4}\)", £7.00.

52. **Joseite.** Carrock Mine, Carrock Fell, Cumberland. Rich silvery-grey metallic plates in quartz matrix. 1\(\frac{1}{2}\)\(\times\)1\(\frac{1}{4}\)\(\times\)1\(\frac{1}{4}\)", £3.25p.

53. **Kesterite (= Iso-Stannite).** Cligga Mine, Perranzabuloe, Cornwall. Very rich greyish metallic mass with quartz and a little arsenopyrite. 2\(\frac{1}{2}\)\(\times\)2\(\frac{1}{2}\)\(\times\)1\(\frac{1}{4}\)", £4.50p.

54. **Kyanite.** Pizzo Forno, Ticino, Switzerland. Fine light blue transparent to translucent elongated bladed crystals to 1\(\frac{1}{4}\)" in length embedded in creamy schist with elongated brownish crystals of Staurolite. 3\(\frac{1}{2}\)\(\times\)2\(\frac{1}{2}\)", £13.00.

55. **Lazurite.** Graves Mt., Georgia, U.S.A. Light blue well formed crystal nearly 1" in size partially embedded in creamy matrix with other crystal sections of lazurite. 1\(\frac{1}{4}\)\(\times\)1\(\frac{3}{4}\)", £6.50p.

56. **Loparite.** Hedrum, Vestfold, Norway. Lustrous blackish mass 1 cm in size in feldspar rich matrix, together with pinkish Catapleiite, and blackish elongated crystals of Augelite. 2\(\frac{1}{4}\)\(\times\)1\(\frac{1}{2}\)\(\times\)1", £2.75p.

57. **Malachite.** Nchanga Mine, near Kitwe, Zambia. Right deep green small sharp crystals thickly covering the surface of massive malachite overlying deeper green banded Pseudomalachite. 3\(\frac{1}{4}\)\(\times\)2\(\frac{1}{2}\)\(\times\)2\(\frac{1}{2}\)", £13.00.

58. **Manganite.** Ilfeld, Harz, Germany. Very choice bright blackish sharp elongated terminated crystals to 2" in length richly scattered over and free standing on crystalline manganite matrix with a little creamy Barytes in association. Fine old specimen. 3\(\frac{1}{4}\)\(\times\)2\(\frac{1}{2}\)\(\times\)2\(\frac{1}{2}\)", £135.00.

59. **Marcasite.** Trecce, Kansas, U.S.A. Select light brassy sharp metallic crystals mostly around 8mm to 1cm in size, thickly covering matrix. 2\(\times\)1\(\frac{1}{2}\)\(\times\)1\(\frac{1}{2}\)", £6.50p.

60. **Mimetite.** Tsumeb, Otavi, S.W. Africa. Lustrous light orangey crystal sheaves to 1" in size richly intergrown on dolomite matrix. 2\(\frac{1}{4}\)\(\times\)1\(\frac{1}{2}\)" to 2", £4.50p.

61. **Muscovite.** Governador Valaderas, Minas Gerais, Brazil. Fine golden sharp platy crystals to 3" in size thickly intergrown on crystalline muscovite matrix. 3\(\times\)3\(\times\)2", £5.50p.

62. **Neopine.** Monte Somma, Vesuvius, Italy. Sharp glassy terminated hexagonal crystals to 3 mm in size richly covering a 1\(\frac{1}{4}\)\(\times\)1\(\frac{1}{4}\) area of basalt matrix. 2\(\frac{1}{2}\)\(\times\)2\(\frac{1}{2}\)\(\times\)2\(\frac{1}{2}\)", £4.75p.

63. **Olivenite.** Wheal Gorland, St. Day, Cornwall. Small sharp lustrous olive green crystals thickly lining cavities in cellular brown gossan. 2\(\frac{1}{4}\)\(\times\)2\(\frac{1}{4}\)\(\times\)2\(\frac{1}{4}\)", £3.25p.

64. **Orpiment.** Napoleon Vein, Quiruvilca, Libertad Dept., Peru. Fine bright orange sharp terminated transparent crystals mostly around 1" in size very richly scattered all over pyritic matrix with odd small sharp Hutchinsonite crystals. 5\(\frac{1}{2}\)\(\times\)4\" to 3", £68.00.

65. **Pharmacosiderite.** Wheal Pendarves, Camborne, Cornwall. Small sharp light greenish cubic crystals lining a 2" cavity on one end of matrix. 2\(\times\)1", £3.25p.

66. **Pharmacosiderite.** Wheal Gorland, St. Day, Cornwall. Sparkling light green small sharp cubic crystals very richly lining numerous large cavities in cellular quartz matrix. 1\(\frac{1}{2}\)\(\times\)1\(\frac{1}{2}\)\(\times\)1\(\frac{1}{2}\)", £13.00.

67. **Prehnite.** Dean Crv., St. Keverne, Lizard, Cornwall. Specimen A: Lustrous lime green sharp crystals mostly around 3-4 mm in size thickly encrusting botryoidal prehnite covering gabbro matrix. 3\(\frac{1}{2}\)\(\times\)2\(\frac{1}{2}\)\(\times\)1\(\frac{1}{2}\)", £6.50p. Specimen B: Select lustrous lime green crystal sheaves to over 1" in size thickly intergrown on massive prehnite. 1\(\frac{1}{4}\)\(\times\)1\(\frac{1}{2}\)\(\times\)1\(\frac{1}{2}\)", £3.50p.
RITES. Oquirrhills, Liberted Dept., Peru. Very Choice bright brassy sharp pyritohedral crystals to ½ in size thickly intergrown and completely covering the surface and sides of massive pyrites matrix, with odd brownish-black sphalerite crystals in places. Fine display specimen. 4x3½x⅕, §20.00

69. PYRITES - octahedral crystals. Oquirrhills, Liberted Dept., Peru. Very sharp bright brassy octahedral crystals intergrown on massive pyrites. Specimen A, with crystals to over ½ in size, 2½x⅜x⅛, £11.00. Specimen B, with crystals to ½ in size, 1⅛x⅝x⅜, £4.50p

70. PYRITES. Wheal Mary Ann, Menheniot, Cornwall. Bright brassy modified cubic crystals to 5 mm in size richly intergrown on milky pyramidal quartz crystals. 2½x⅞x⅛, £3.25p

71. PYROMORPHITE. Braubach, E.T., Elnassau, Germany. Very choice lustrous light brown sharp hexagonal crystals and crystal clusters to 1 cm in size richly scattered and intergrown all over cellular quartz matrix. Choice display specimen. 5x⅝x⅝, £8.00

72. PYRROTITE. Santa Eulalia, Chihuahua, Mexico. Sharp dark brassy metallic hexagonal crystals to 8 mm in size associated with milky quartz crystals covering matrix. 2½x⅞x⅛, £4.50p

73. QUARTZ. Val Tavetsch, Grisons, Switzerland. A fine clear well terminated flat tabular crystal with long flat light golden inclusions of Rutile. In some cases the rutile has been leached out leaving long hollow casts within the quartz. A most unusual and interesting specimen. 3⅛x2⅜x⅛, £13.00

74. QUARTZ. Idarado Mine, Silverton, Colorado, U.S.A. Slender well formed and terminated milky crystals to over 1" in size completely covering and free standing on matrix, with a later deposition of creamy Calcite frosting the quartz crystals. 6x⅜x⅝, £13.00

75. QUARTZ. Gillfoot Mine, Egremont, Cumberland. Sharp transparent doubly terminated pyramidal crystals to 2⅛ in size intergrown on matrix with odd bright black plates of Specularite and light brown saddle-shaped crystals of Dolomite. 3⅞x⅞x⅛, £20.00

76. RAMMELSBERGITE. Lainjaur, Lappland, Sweden. Silvery metallic masses with much bronzey niccolite in matrix. 2⅝x⅞x⅛, £2.50p

77. RENIERITE. Kipushi, Kasai, Zaire. Very rich bronzey metallic mass with odd spots of sphalerite. 1⅝x⅞x⅛, £8.00

78. RUBY CORUNDUM. Mysore district, India. Fire lustrous raspberry coloured hexagonal crystals and crystal sections to 1" in size showing good triangular growth patterns, associated with creamy calcite and platey brown muscovite mica. Very rich specimen. 4x2½x⅝, £13.00

79. RUTILE. Creag-na-Caillich, Killin, Perthshire, Scotland. Lustrous Feddish-brown longated striated crystals scattered in milk; quartz. Specimen A: 2⅝x⅞x⅛, £3.25p. Specimen B: 1½x⅜x⅛, £2.25p

80. SCHEelite. Carrrock Mine, Carrrock Fell, Cumberland. Small sharp pale brown octahedral crystals lining a ½" cavity in quartz/wolframite matrix. 2½x⅛x⅛, £3.25p

81. SCHOLZITE. Reaphook Hill, Flinders Range, S. Australia. Creamy-white sharp needly crystals to 1" in length thickly lining and filling cavities in cellular limonitic matrix. 2⅝x⅞x⅛, £6.50p

82. SEODRITE. Henderon Hall wolfram openwork, Plympton, Devon. Fine sharp olive-green crystals to 3 mm in size richly intergrown all over, and lining cavities in cellular quartz. 2⅝x⅜x⅛, £13.00

83. SPECULARITE. Florence Mine, Egremont, Cumberland. Bright black sparkling platy crystals associated with clear sharply terminated pyramidal quartz crystals completely covering hematite matrix. 4x3½x⅛, £23.00

84. SPHALERITE var. RUBY BLENDE. Trecco, Kansas, U.S.A. Choice translucent large orangey-brown to orangey well formed crystals to 2½ in size thickly intergrown on matrix. 4x3½x⅛, £17.00

85. SPHALERITE. Chacra Virrayna Mine, near Lima, Peru. Bright brownish-black large sharp crystals with a bluish metallic tarnish, to 2⅛ in size, dotted on matrix with small clear quartz crystals; odd bright pyrites crystals, and odd bright silvery-grey sharp tetrahedrite crystals. 2⅝x⅞x⅛, £9.00

86. STILBITE. Poona, near Bombay, India. Large lustrous creamy-white crystal sheaves to 2½ in size intergrown on one end of basalt matrix. 5x⅝x2⅜, £8.00

87. STILBITE. Mullailey, N.S. Wales, Australia. Lustrous orangey crystal sheaves with minute sparkling creamy quartz crystals encrusting the termination. 2⅝x⅝x⅝, £4.50p
88. STOLZITE. Baggestorp, Sweden. Creamy masses embedded in quartz/wolfenite matrix. $2.50

89. STRONTIANITE. Clausthal, Harz, Germany. Creamy-white crystal sprays to ¼" in size scattered and intergrown on coxcomb barytes matrix. 2 x 1½ x 1", £4.50

90. NATIVE SULPHUR. Agrigento, Sicily, Italy. Fine sharp transparent crystal ¾" in size, implanted on calcite/bitumen matrix with a smaller ¼" sized crystal. 2¾ x 1¾ x 1¾", £14.00

91. TARGUTTITE. Broken Hill, Zambia. Sharp transparent glassy crystals richly lining numerous cavities in cellular limonitic matrix. 1½ x 1½", £3.25

92. TETRAHEDRITE. Casapalca, Junín Prov., Peru. Very large silvery-grey well formed crystals to 1" in size intergrown on matrix with a little drusy crystallised quartz and odd bright Galena crystals to ½" in size. 3¾ x 3 x 1½", £33.00

93. METALLIC TIN. Chy-an-Dour works, Penzance, Cornwall. Silvery-grey metallic mass of tin metal (known as drip-tin) formed by spillage from the furnaces. 2 x 1¼ x 1¼", £3.50

94. TCHERBERNITE. Chinkolobwe, Katanga, Zaire. Specimen A: Deep green sharp platy crystals to 5 mm in size thickly intergrown and completely covering matrix. 4 x 2½ x 2½", £33.00. Specimen B: Bright green platy crystals to ½" in size thickly intergrown and covering both sides of matrix. 1¼ x 1¼ x 1¼", £11.00

95. TOURMALINE variety DRAVITE. Yinnietharra, W. Australia. Select lustrous brown sharp doubly terminated single crystals. Specimen A: 2½ x 2½ x 2½", £7.00. Specimen B: 1¼ x 1¼ x 1¼", £2.75

96. WAVELLITE. Highdown Qry., Filleigh, Devon. Very rich silky golden radiated hemispherical masses to 1 cm in diameter richly covering altered slate matrix. Very fine specimen for this location. 5 x 2¼ x 1½", £11.00

97. WITHAMITE. Glencoe, Argyllshire, Scotland. Light reddish crystalline masses infilling cavities in basalt matrix. 1¼ x 1¼ x 1", £2.50

98. WULFENITE. Los Lamentos, Chihuahua, Mexico. Choice bright orangey transparent tabular crystals to 1 cm in size intergrown and scattered on creamy calcite matrix. Specimens approx 1¼ x 1¼ in size, £4.50 each.

99. ZOISITE var. THULITE. Lon, Norway. Solid light pink crystalline mass. 2½ x 2½ x 1½", £3.50

GEMCRAFT EXPO, COMMONWEALTH INSTITUTE, KENSINGTON HIGH STREET, LONDON W8

Saturday and Sunday, 21st & 22nd October 1978, 10 am to 6 pm each day.

We shall be attending this show and our stand nos are 14 & 15, and we will have a large range of fine minerals on display, including many rare and unusual items collected in Cornwall and Northern England over the past months. We look forward to seeing you at the Show if you can make it.
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Cheque with order. All prices are inclusive of V.A.T.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

NOVEMBER 1978

1. ACTINOLITE. Kyle of Lochalsh, Ross-shire, Scotland. Fine lustrous olive-green broad elongated tabular crystals and crystal sections with minor schist matrix. Specimen A: 3x3x1½" with crystals to 2½" in length, £6.50p. Specimen B: 3¼x1½x1¼", with crystals to 1½" in length, £3.75p. Specimen C: 2x1¼", with crystals to 1½" in length, £1.50p.

3. ANATASE. St. Gotthard, Ticino, Switzerland. Sharp lustrous blackish crystals to 4 mm in size scattered over matrix with small quartz crystals. 2x1", £9.00.

4. APATITE. Panasqueira, Beira-Beixa, Portugal. Select translucent sea-green sharp doubly terminated hexagonal crystal with small crystals attached. 2x2½x1½", £6.50p.

5. APOPHYLLITE. Poonam, nr. Bombay, India. Specimen A: Choice lustrous creamy-white sharp large crystals to 2" in size, scattered on matrix with pale olive-coloured crystalline balls of GYROLITE to 5 mm in size. Good display specimen. 5x3½x1¾", £18.00. Specimen B: Clear creamy-white sharp crystals to ¾" in size intergrown and scattered on matrix with small glassy Quartz crystals and pale greenish crystal masses of Prehnite. 3x2½x2", £5.75p.

6. ARAGONITE. Monte Poni, Iglesias, Sardinia. Select creamy-white ramifying coralloidal mass of good shape for display. 2½x2½x1", £5.50p.

7. ARGENTITE. Comstock lode, Virginia City, Nevada, U.S.A. Very rich heavy dull greyish masses with minor native silver intergrowths. Specimen A: 2¾x2¾x2", £7.00. Specimen B: 2¼x1¼", £7.00.

8. ARSENOPYRITE. New Rosewarne Mine, Gwinear, Cornwall. Large tarnished sharp crystals to ½" in size intergrown on matrix and associated with creamy elongated Quartz crystals and lustrous blackish Sphalerite crystals. 3x2x1", £14.00

9. ARSENOPYRITE. Panasqueira, Beira-Beixa, Portugal. Bright silvery sharp striated crystals to ½" in size associated with well formed bright brassy CHALCOPYRITE crystals to ½" in size on matrix. 2x2", £9.00.

10. AZURITE. Broken Hill, N.S. Wales, Australia. Fine bright blue sharp elongated terminated crystals to ½" in length, intergrown and scattered on one end of matrix, with minor greenish malachite. Choice old specimen. 2x1¼x1", £24.00

11. BARYTICALCITE. Blagill Mine, Alston Moor, Cumberland. Sharp clear to creamy coloured elongated crystals to ½" in length lining cavities in brecciated barytocalcite matrix. 2x1¼x1¼", £2.50p.

13. BORNITE. South Caradon Mine, St. Cleer, Cornwall. Rich solid attractively tarnished purply metallic mass. 3x1½x1½", £4.50p

14. CALCITE. Naica, Chihuahua, Mexico. Choice lustrous creamy sharp hexagonal crystals to 1" in size, most having flat terminations, intergrown in parallel position to form a most interesting specimen rather resembling a crank-shaft in shape. 4½x2½x1½", £14.00

15. CALCITE. Tsumeb, Otavi, S.W. Africa. Sharp clear rhomboic crystals mostly around 1½" on face edge, intergrown on matrix. 2½x1½x1½", £5.50p

16. CARPHOLITE. Wippra, Harz, Germany. Old golden radiated crystalline mass. 2x1½", £4.50p

17. CASSITERITE. Wheal Berry Mine, Lanivet, Cornwall. Very rich heavy deep brown crystalline vein section with altered slate walls. An old label is attached to the specimen. 5½x3½" by 2" wide. £11.00

18. CASSITERITE. Storey's Creek, Tasmania, Australia. Choice bright black sharp twinned crystal showing parallel growth on it's faces. 1½" long, £14.00

19. CERARGYRITE. Broken Hill, N.S. Wales, Australia. Dull brownish pure cellular crystalline mass. 2x1½x1½", £9.00

20. CERUSSITE. Tsumeb, Otavi, S.W. Africa. Fine sharp creamy lustrous twinned sixling crystal 1" in size, implanted on cellular matrix, with odd smaller twinned crystals. 3½x1½x1½", £4.50p

21. CHALCOSIDERITE. Phoenix Mine, Linkinhorne, Cornwall. Deep green sharp crystals to 2 mm in size scattered and lining cavities in cellular ferruginous matrix. 3½x1½x1½", £6.50p

22. CLINOZOISITE. Lon, Norway. Lustrous dark olive-green elongated crystal section 1½" in length embedded in pegmatite matrix. 2½x1½x1½", £1.50p

23. COBALT DAUNSONITE. Valle Benedetta, Livorno, Italy. Light purplish to creamy radiated masses lining joints in a biotite matrix. 2½x1½", £3.25p

24. COBALTITE. Mt. Cobalt, Selwyn Ranges, Queensland, Australia. Bright silvery metallic cubic crystals and crystal sections to 1½" in size richly embedded in schistose matrix with a little needly crystallised Erythrite in places. 2x2", £4.50p

25. NATIVE COPPER. Bisbee, Cochise Co., Arizona, U.S.A. Select coppery metallic ramifying dendritic crystallised mass with minor matrix attached. 3½x2", £6.50p

26. NATIVE COPPER, Goonhilly Down, Lizard, Cornwall. Ramifying sheet-like mass coated with reddish cuprite, greenish chrysocolla and odd fragments of serpentine, on a matrix of altered serpentine. Overall size 4½x3½x1½", £8.00

27. NATIVE COPPER. Corn Area Mine, Illogan, Cornwall. Rich pure cellular crystallised dendritic mass. Very interesting specimen collected in the early part of the last century. 3x2x1½", £11.00

28. NATIVE COPPER. Calumet Mine, Keweenaw Pen., Michigan, U.S.A. Fine large ramifying natural mass of elongated well formed crystals, with odd fragments of calcite in places. Individual crystals range up to 2½" in size. Very choice old specimen, with an old label accompanying it. 7½x6x2", £75.00

29. CUPRITE. Wheal Virgin, Guernap, Cornwall. Pure deep red cellular mass of intergrown small sharp octahedral crystals. 3x2½x1½", £14.00

30. CUPRITE. Copper Queen Mine, Bisbee, Cochise Co., Arizona, U.S.A. Very rich bright reddish mass with small bright green needly MALACHITE crystals lining cavities, together with odd small crystals of blue Azurite. 2½x2½x2½", £4.75p

31. CUPRITE. Wheal Damsel, Guernap, Cornwall. Rich deep reddish cellular crystallised mass with minor quartz gossan. 2½x2½x1½", £4.50p

32. DIOPTASE. Mintaulli, Niari River, Zaire. Bright emerald green sharp crystals to 2½" in size lining a 1½" cavity in crystalline diopside matrix. 2½x1½x1½", £14.00

33. EUXENITE. Unneland, Evje, Norway. Rich lustrous brownish-black masses in pegmatite. 1½x1½", £1.75p

34. FLUORITE. Heights Mine, Weardale, Co. Durham. Fine transparent to translucent sharp cubic crystals to 1" in size intergrown together on fluorite matrix. The crystals have an unusual light purplish colour, with the edges of each crystal having a more intense colouration than the centres. 4x¾x1½", £16.50p
35. FLUORITE. Blackdene Mine, Weardale, Co. Durham. Transparent pale sea-green coloured sharp cubic crystals to ½" in size forming an intergrown group, with odd small creamy CALCITE crystals, a little brownish Siderite, and a sharp brassy twinned Chalcopyrite crystal 5 mm in size, scattered over the fluorite. $11.00

36. FLUORITE. Blackdene Mine, Weardale, Co. Durham. Fine lustrous purple sharp cubic crystals to 1" in size forming an intergrown group. Fine specimen for display. 9½ x 9½ x 1½", $28.00

37. GALENA. Blackdene Mine, Weardale, Co. Durham. Bright silvery-grey sharp cube-octahedral crystal 1x1" in size associated with transparent light purplish cubic Fluorite crystals to ½" in size. 2x1½ x 1½", £4.50p

38. GOETHITE. Restormel Royal Iron Mine, Lostwithiel, Cornwall. Lustrous sharp blackish elongated crystals to 5 mm in length intergrown and scattered on radiated crystalline goethite matrix, with odd small cavities also lined with crystals. 2x1½ x 1½", £8.00

39. HEMATITE. Rio Marina, Isle of Elba, Italy. Large bright blackish sharp platy crystals to 1" in size forming an intergrown group on platy crystalline hematite matrix. 2½ x 2½ x 1½", £8.00

40. HEULANDITE. Poona, near Bombay, India. Lustrous creamy-white sharp terminated tabular crystals mostly around 1 cm in size thickly covering matrix, with a ½" sized creamy sheaf of STILbite crystals implanted on one edge. 4½ x 3", £11.00

41. HISINGERITE. Penlee Qry., Newlyn, Cornwall. Rich blackish mass covering altered greenstone matrix. 2½ x 2½ x 2", £5.00

42. HORNBLENDE. Arendal, Aust-Agder district, Norway. Well formed lustrous blackish terminated crystals and crystal sections to over 1½" in length scattered in and on calcite matrix. 3x2½ x 1½", £6.50p

43. JEPHUSONITE. Quiruvilca, Libertad District, Peru. Very choice lustrous blackish sharp elongated terminated crystals to 5 mm in length richly scattered all over pyrite/quartz veinstuff with large orangey-yellow sharp terminated ORPIMENT crystals to 1" in size. Very fine example of this rare mineral. 2½ x 2½ x 1½", £125.00

44. INESITE. Hale Creek Mine, Trinity Co., California, U.S.A. Light pink sharp crystals to 8 mm in size intergrown on calcite/inesite matrix. 1½ x 1½ x 1½", £6.50p

45. JACOBITE. Langben, Värmland, Sweden. Rich black crystal sections associated with calcite and with thin reddish crusts of Litharge. Specimen 8: Rich blackish crystalline mass. 1½ x 1½ x 1½", £1.50p

46. JAMESONITE. Bodannon Mine, Port Isaac, Cornwall. Silvery-grey metallic silky crystalline mass with milky quartz and minor yellowish Binchoisite in places. 2½ x 2½ x 1½", £5.00

47. JAROSITE. Laurium, Attica District, Greece. Sharp lustrous light brown crystals to 3 mm in size lining numerous cavities in cellular matrix. 1½ x 1½ x 1½", £11.00

48. LEADHILLITE. Redgill Mine, Caldbeck Fells, Cumberland. Creamy-white platy crystalline masses lying flat and scattered on quartz/galena veinstuff. Specimen A: 2½ x 1½ x 1½", £3.50p. Specimen B: 2½ x 1½ x 1½", £2.75p

49. LISKEARDITE. Penberthy Croft Mine, St. Hilary, Cornwall. Rich whitish crusts lining cavities in cellular gossan matrix. 1½ x 1½ x 1½", £3.50p

50. MAGNETITE. Tiaversella, Piedmont, Italy. Lustrous black sharp crystals to ⅛" in size lining cavities in and scattered over massive magnetite/calcite matrix. 2½ x 2½ x 1½", £7.00

51. MALACHITE. Tsumeb, Namibia, S.W. Africa. Bright green sharp feathery crystals to 3 mm in size covering hematite rich matrix. 2½ x 1½ x 1½", £3.50p

52. MALACHITE. Burra-Burra, Yorke Pen., S. Australia. A ball-like mass of bright green melachite replacing azurite crystals to ⅛" in size, and with areas of bright blue unaltered Azurite in places. 2½ x 1½ x 1½", £5.00

53. MALACHITE. Kabwe, Zambike, Zaire. Very fine bright green concentrically banded slab which has been cut and polished. Very attractive specimen for display, with the banding being particularly well developed. 5x4", £33.00

54. MANGANOCALCITE. Mendip Hills, Somerset. Specimen A: Light pink lustrous botryoidal masses thickly covering dog-tooth calcite crystals lining large cavities in pyrolusite matrix. 3x2½ x 1½", £8.00. Specimen B: As specimen A, with the manganocalcite lining one 1½" cavity in the matrix, 2½ x 1½ x 1½", £3.25p
55. **MARCASITE.** Panasqueira, Beira-Beixa, Portugal. Fine bright light brassy sharp bladed crystals showing parallel growth of their faces, to over 2" in size, richly intergrown on arsenopyrite matrix with odd silvery sharp Arsenopyrite crystals and a little creamy crystallised Calcite. 2½x2⅓x1", £14.00

56. **MENDIPITE.** Mendip Hills, Somerset. Lustrous slightly pinkish creamy-white bladed crystalline mass 1½x1⅓" in size, embedded in creamy crystalline Hydrocerussite in pyrolusite matrix. 3x2¼", £22.00

57. **OLIVENITE.** Wheal Gorland, St. Day, Cornwall. Small sharp lustrous olive-green crystals richly lining numerous cavities in cellular quartz matrix. 3x2⅔", £7.00

60. **PIEMONITE.** St. Marcel, Piedmont, Italy. Rich dark reddish-brown bladed crystals and masses associated with quartz. Specimen A: 2½x1½", £7.00. Specimen B: 1½x1¼"x1¼", £1.50p.

61. **PSEUDOMALACHITE.** Vâr'na Mine, Rhenbreitbach, Germany. Small lustrous sharp deep green crystals lining cavities and encrusting areas of milky quartz/pseudomalachite matrix. 2⅔x2½x1", £16.50p.

63. **PSILOMELANE.** Trebartha temame, North Hill, Cornwall. Select lustrous black pure botryoidal and stalactitic mass. 2½x2¼x1¼", £4.50p.

64. **PSILOMELANE.** Moldawa, Banat District, Hungary. Bright lustrous black botryoidal mass covering iridescent tarnished Chalcopyrite with a little quartz. 2½x2½x1¼", £4.75p.

65. **PYRHOTITE.** Santa Eulalia, Chihuahua, Mexico. Large sharp mostly complete bright deep bronzey hexagonal single crystal, with small sharp silvery Arsenopyrite crystals scattered in places. 1½x1½", £9.00

66. **SMOKY QUARTZ.** River Secchia, Reggio, Italy. A sharp dark smoky coloured terminated hexagonal crystal ½" in size implanted in a hollow in creamy-white anhydrite matrix. 2½x2¼x1¼", £8.00

67. **SMOKY QUARTZ.** Diamatina, Minas Gerais, Brazil. Sharp glassy clear pyramidal crystals to over 1" in size thickly covering both sides of a creamy-white barytes crystal. 1½x1", £22.00

68. **SMOKY QUARTZ.** Hailemoor Mine, Egremont, Cumberland. Clear slightly smoky sharp doubly terminated hexagonal crystals, some showing smoky ghosted interiors, to 1" in size, forming an intergrown group with odd small sharp Anatase crystals on the reverse side of the specimen. 2½x1¼x1½", £7.00

69. **SMOKY QUARTZ.** Isere, France. Sharp clear hexagonal crystals, some showing smoky ghosted interiors, to 1" in size, forming an intergrown group with odd small sharp Anatase crystals on the reverse side of the specimen. 2½x1¼x1½", £7.00

70. **SMOKY QUARTZ.** Panasqueira, Beira-Beixa, Portugal. A fine elongated large single well terminated mostly clear crystal, with the sides partly encrusted with small creamy calcite and pale brown siderite crystals. 8" long by 1¼" across the axis. £13.00

71. **SMOKY QUARTZ.** Wheal Jane, Kea, Cornwall. Select translucent to transparent elongated milky crystals to 1¼" in length forming an attractive group with odd small cubic pyrites crystals in places. 2¼x1½x1¼", £3.50p.

72. **SMOKY QUARTZ.** Heilbronn Mine, Egremont, Cumberland. Clear slightly smoky sharp doubly terminated crystals to over ¾" in size covering the surface and one side of hematite matrix, with odd bright black platy Specularite crystals and odd creamy barytes crystals in association. 3¼x2¼x1¼", £8.00
QUARTZ. Levant Mine, Pendeen, Cornwall. Sharp bright clear pyramidal crystals mostly around 1" in size thickly covering milky quartz matrix. £1.50

75. RENARDITE. Shambaikowe, Katanga, Zaire. Light yellow micro crystals lining small cavities in quartzose matrix, with odd small green todorokite and sengonite crystals. £8.00

76. RHODOCHROSITE. Kassandra, Chalkidiki, Greece. Lustrous light pinkish small crystals and crystal masses richly covering areas of sphalerite/pyrites matrix, with small quartz crystals and odd bright turned silver-grey BOURMONITE crystals to 5 mm in size in places. Nice display specimen. £24/4x2½", £17.00

77. RUBY CORUNDUM. Beit Bridge, Limpopo River, Rhodesia. Select purply-pink well formed large hexagonal single crystal with odd fragments of muscovite mica attached. 2½x2x1½", £3.00

78. SCHEELITE. Zinnwald, Bohemia, G.S.S.R. Sharp lustrous light brown octahedral crystals mostly around 2-3 mm in size richly covering large areas of quartz/wolfenite matrix, with odd large plates of zinnwaldite mica. £2½x2½", £27.00

79. SIDERITE. Morro Velho goldmine, Minas Gerais, Brazil. Fine lustrous light brown lenticular crystals to 1" in size associated with creamy rhombo Dolomite crystals to 1½" in size, and odd small sharp brassy Pyromorphite crystals to 2 mm in size, all covering matrix. £2½x3¼", £8.00

80. NATIVE SILVER. Cobalt, Ontario, Canada. Rich tarnished silvery sheet-like mass associated with a little dolomite and greyish masses of cobaltite. £2½x2½", £9.00

81. SMITHSONITE. Taumeb, Otavi, S.W. Africa. Sharp clear monoclinic crystals to 4 mm in size thickly covering an intergrown mass of crudely formed Galena crystals. £1½x1½", £4.50

82. SMITHSONITE. Taumeb, Otavi, S.W. Africa. Lustrous creamy-yellow well formed crystals to ½" in size intergrown on both sides of matrix. £2½x1½", £4.50

83. SPHALERITE. Hydromel Shaft, Smallcleugh Mine, Narthead, Cumberland. Fine bright black sharp crystals to ½" in size dotted on minute whitish quartz crystals covering limestone matrix. £3½x1½", £11.00. Specimen B: Bright black sharp crystals to 1 cm in size scattered over whitish coated limestone matrix. £2½x2½", £4.75. Specimen C: As specimen B, 1½x1½", £2.50

84. SPHALERITE. Trepca, Yugoslovain. Bright black sharp crystals to ½" in size covering matrix, with creamy white translucent crystal masses of CALCITE + 1 cm in size scattered in places, and with the reverse side of the specimen completely encrusted with Intergrown creamy Calcite crystals. £2½x2½", £12.00

85. SPHALERITE. Dexter Springs, Cherokees Co., Kansas, U.S.A. Large bright black well formed crystals showing parallel growth of their faces to 1½" in size, forming an intergrown group with a little creamy Dolomite in association. £2½x1½", £8.00

86. SPHALERITE. Wheal Jane, Kea, Cornwall. Bright black sharp crystals to 5 mm in size scattered on matrix and associated with small clear quartz crystals and sharp silvery arsenopyrite crystals. £2½x2½", £2.50

87. STIBNITE. Knipes Mine, New Cumnock, Ayrshire, Scotland. Very rich bright silvery-grey bladed crystalline mass with slight alteration to yellowish stibiconite on one side. £2½x2½", £3.25

88. STICHITE. Dundas, Tasmania, Australia. Purplish slickensided mass covering altered serpentinite matrix. £2½x2½", £5.50

89. STROMEVERITE. Smuggler Mine, Aspen, Colorado, U.S.A. Tarnished dark greyish metallic masses on and in milky quartz with odd small patches of native silver. £3x2½", £4.50

90. TARNOWITZITE. Mendip Hills, Somerset. Lustrous creamy divergent spray of elongated crystals 1" in length, projecting into a ½" cavity lined with creamy to pinkish Manganoan Calcite covering dog-tooth calcite crystals in calcite/pyrolusite matrix. £3x2½", £3.25

91. TETRAHEDRITE. Castro Virreyn Mine, near Lima, Peru. A large sharp silvery-grey single tetrahedral crystal with smaller crystals growing out of the surface, together with odd clear quartz crystals. 1½x1½", £13.00

92. VARISCITE. Hot Springs, Garland Co., Arkansas, U.S.A. Bright apple green rich botryoidal crusts richly covering areas of brecciated matrix. £3x2½", £4.50

94. **WERMLANDITE.** Longbar, Wermland, Sweden. Pale yellowy-green platy crystals scattered on granular creamy dolomite matrix, $\frac{1}{2}$ x $\frac{1}{2}$ x 1", £2.50

95. **WITHERITE.** Rosiclare, Hardin Co., Illinois, U.S.A. Fine sharp creamy terminated hexagonal crystals to 1" in size intergrown and scattered on matrix with small calcite crystals and odd light purplish fluorite crystals. 3 x 2\frac{1}{2} x 2", £13.00

---

Our apologies for the late issue of the November listing, which was due to our attending both the London and Munich shows at the end of October. Fine specimens, both British and Foreign, which were acquired at Munich, will be featured on the December list.
ORDERING INFORMATION

Mail orders are promptly filled and despatched on a 7-day examination basis, subject to approval. Immediate refund guaranteed on return of the specimen(s), in good condition.

Please quote the name and number of the specimen(s) required, and enclose P.O./Credit with order. All prices are inclusive of VAT.

No charge is made for postage and packing, except for overseas customers and postage over 75p.

We reserve the right to make slight substitutions, if necessary, unless advised to the contrary.

Special requests and "wants lists" are welcome.

We hope that we may be of some service to you, and assure you of our best attention at all times.

DECEMBER 1978
Pikes Peak, Colorado, U.S.A.

1. AMAZONITE. Select lustrous greenish Terminated crystal 1¾x1" in size with slightly smoky quartz attached. 2x1½x1¼", £8.00

2. AMARITE. Bellaver de Cerdena, Gerona, Spain. 1½x1½" cavity in a mudstone nodule, completely lined with small sharp light olive coloured lustrous crystals. 3x2½x1¼", £4.75p

3. ANGLESITE. Moncanti, near Iglesias, Sardina. Sharp Terminated tabular crystals to 5 mm in size richly scattered and intergrown on galena matrix. 2x1½x1¼", £11.00

4. APATITE. Botallack Head, St. Just, Cornwall. Lustrous creamy hexagonal crystal sections to over ¾" in size embedded in brownish garnet matrix. 2½x1x1", £3.25p

5. ARAGONITE. Molina de Aragon, Spain. Specimen A: Two sharp translucent purplish hexagonal crystals, one being 1½x1½", the other 1¼x1¼" in size, joined together. Overall size 3x2x1¼", £6.50p. Specimen B: A large translucent purplish sharp hexagonal crystal with smaller crystals attached. 2x2x1½", £4.50p. Specimen C: Sharp translucent hexagonal crystal with another attached on one end. 1½x1½x1", £2.25p. All these specimens are of excellent colour and perfection.

6. ARAGONITE. Roswell, nr. Frizington, Cumberland. Sharp transparent spear-like crystals to 1½" in size covering ankerite matrix. 1½x1½x1¼", £2.75p

7. ARAGONITE. Leurium, Attica district, Greece. Fine turquoise-blue fibrous mass with the surface covered with ramifying tubose "floc-ferri". Very attractive specimen for display. 7x3½x2½", £16.50p

8. NATIVE ARSENIC. Kupa Mine, near Bae, Sarawak, Borneo. Specimen A: Choice greyish metallic mass with a little quartz, stibnite and realgar, with a bright botryoidal surface. 2½x1¼x1₂₈", £14.00. Specimen B: Very rich greyish mass with a little quartz, stibnite and spots of realgar. 2½x1½x1¼", £8.00. Specimen C: as specimen B, 2x1½x1¼", £4.50p. Specimen D: Rich greyish metallic mass with a botryoidal structure on one side, 1½x1", £2.50p

9. ARSENOPYRITE. Parrall, Chihuahua, Mexico. Specimen A: Very bright silvery sharp diamond-shaped crystals to ½" in size thickly intergrown on and lining cavities in massive arsenopyrite matrix. 3x2×1¾", £11.00. Specimen B: Choice bright silvery sharp crystals to over ½" in size forming an intergrown group with a little quartz on the reverse side. 2½x1½", £6.50p

10. ATACAMITE. La Farola Mine, Copiapo, Chile. Specimen A: Lustrous bright green sharp bladed crystals mostly around 4-5 mm in size, thickly covering matrix. 2x1¾", £6.50p. Specimen B: Bright green rod-like crystals to 4 mm in size aggregated in areas on chrysocolla matrix. 2x1½", £2.25p
11. AURICHALCITE. 79 Mine, Hayden, Gila Co., Arizona, U.S.A. Specimen A: Very choice bright turquoise blue needly crystals completely covering cellular limonitic matrix with a little crystallised Calcite. The reverse side shows cavities lined with star-like crystal aggregates of aurichalcite. Very choice display specimen. 5x3", £33.00. Specimen B: Fine turquoise blue radiated needly crystal 'balls' to ½" in size, very attractively scattered over blackish botryoidal goethite on limonitic matrix. 3½x2½", £23.00. Specimen C: Fine turquoise blue radiated crystal balls to over ½" in size covering limonitic matrix with odd cavities lined with small sharp Hemimorphite crystals. 2½x2½", £14.00.

13. AZURITE. Chezay, Phone, France. Bright blue sharp crystals to 8 mm in size thickly lining cavities to 1" in size in crystalline azurite/creamy clay matrix. 3x2½", £8.00.

14. BARYTES. Carbonate Shake, Murton Mine, Scordale, Westmoreland. Select divergent spray of sharp clear well terminated large tabular crystals, the largest being 3x2" in size. 3¼x2¼x½", £8.00.

15. BARYTES. New Glaucorrieff Mine, Wanlockhead, Dumfries, Scotland. Lustrous creamy-white sharp crystals to 1" in size forming an intergrown group. 2½x2", £3.50p.

16. BENITOITE. San Benito Co., California, U.S.A. Choice light cornflower-blue crystals to ½" in size scattered and partially embedded on white natrolite matrix, with several bright blackish sharp elongated NEPTUNITE crystals to 1 cm in size. 3½", £20.00.

17. BERYL variety AQUAMARINE. Teofilo Otoni, Minas Gerais, Brazil. Select clear pale greenish elongated terminated single crystals showing interesting growth patterns. Each approx 1½" long by 1 cm across the axis. £3.50p each.

18. BEUDANTITE. Wheal Carpenter, Gwinear, Cornwall. Rich crust of minute sparkling dark olive coloured crystals covering quartz veinstuff, with cavities on the reverse side of the specimen lined with crystals. 2½x1½", £4.50p.

21. BOURNHOME. Julcan Mine, Junin Prov., Peru. Specimen A: Well formed dark grey cog-wheel crystals to ¼" in size scattered over an intergrown group of bright golden pyritohedral PYRITE crystals to over ¼" in size. 2½x2", £23.00. Specimen B: Bright silvery-grey sharp cog-wheel crystals to 4 mm in size scattered all over a cellular matrix with odd sharp black Sphalerite crystals, a little Pyrite, and on the reverse side, sharp rod-like silvery crystals of Arsenopyrite. 3x2½", £23.00. Specimen C: A sharp dark grey twinned cog-wheel crystal 1 cm in size implanted on an intergrown group of bright golden pyritohedral PYRITE crystals to ¼" in size. 2½x1¼", £13.00. Specimen D: Bright silvery-grey sharp cog-wheel crystals to 4 mm in size scattered over cellular matrix with a little Pyrites and Quartz. 1x1¼", £8.00.

22. CALCITE. St. Andreasberg, Harz, Germany. Fine lustrous creamy stout hexagonal flat terminated crystals to 1" in size thickly intergrown on matrix. Choice old specimen. 3½x2½x1¼", £28.00.

23. CALCITE. Levant Mine, Pendeen, Cornwall. Sharp creamy translucent platy hexagonal crystals to 1 cm in size thickly intergrown on milky quartz veinstuff. 2½x2½x2", £4.75p.

24. CASSITERITE. Trevanance Mine, St. Agnes, Cornwall. Large lustrous brownish well formed crystals to ½" in size intergrown on one side of crystalline cassiterite/slate matrix. 3x2½", £13.00.

25. CASSITERITE. Boj ewans tin-stream works, Sancreed, Cornwall. Rich dark brown mass intermixed with milky quartz crystal sections and showing fibrous 'wood-tin' structure in places. One side of the specimen has been cut & polished. 2½x1½", £3.50p.

26. CARPHOLITE. 4th of July Mine, San Benito Co., California, U.S.A. Specimen A: Golden yellow bladed crystals to 5 mm in length scattered sparsely over ferruginous matrix with odd patches of reddish Cinnabar. 3½x2½x1¼", £5.50p. Specimen B: Golden yellow platy crystals aggregated in areas on ferruginous matrix with traces of cinnabar. 1¼x1¼", £2.50p.
CERUSSITE. Redburn Mine, Rookhope, Co. Durham. Choice creamy reticulated mass of jackstraw crystals to 1" in length with light brownish limonite in places. 3x2x1½", £16.50p.

29. CHP CECITE. Wheal Coack, St. Just, Cornwall. Bright silvery-grey well formed hexagonal crystals showing interesting growth structures on their faces, to 1 cm in size intergrown on and with cellular quartzite veinstuff. 2½x1", £23.00.

30. CHALCOCITE. Crenover & Abraham Mine, Crowen, Cornwall. Bright silvery-grey intergrown group of sharp crystals, showing smaller crystals covering larger crystals to 1 cm in length. 1½x1", £25.00.

31. CHLORRITE. George & Charlotte Mine, nr. Tavistock, Devon. Specimen A: Bright golden-brown sharp crystals to 2 mm in size richly covering a 1" area on quartz/siderite matrix. 2½x1¾", £8.00. Specimen B: Bright golden-brown sharp crystals to 2 mm in size aggregated on a 2" area on chloritised alaste/pyrite matrix. 1¼x1½", £5.50p.

33. CINNABAR. Almaden, Ciudad Real, Spain. Specimen A: Bright red sharp crystals and crystal sections to 3 mm in size richly lining cavities and joints in quartzite matrix, with the uppermost surface mostly covered in crystalline cinnabar. 4x2x1¼", £14.00. Specimen B: Bright red sharp crystals and crystal sections to 3 mm in size covering a 1½" area on quartzite matrix. 2½x1½", £9.00. Specimen C: Bright red crystals to 3 mm in size lining a 1" cavity in dark quartzite matrix. 2½x1½", £6.50p.

34. CLINOPHANE. Wheal Gorland, St. Day, Cornwall. Specimen A: Bright deep blue small sharp crystals richly lining numerous cavities in cellular quartzite veinstuff. 2½x1½", £8.00. Specimen B: Bright blue crystals to 3 mm in size lining cavities in cellular quartz with a little Olivine. 1½x1", £4.50p.

36. CONELLYITE. Perran St. George Mine, Perranzabuloe, Cornwall. Sky blue fibrous banded solid mass with a botryoidal surface. 1½x1", £5.50p.

37. NATIVE COPPER. Mufulira Mine, Zambia. Choice bright metallic mass of sharp spiky crystals forming a branch-like dendritic shape, with minor fragments of quartz in places. Attractive specimen for display. 6x2½x1½", £28.00.

38. COVELLITE. Leonard Mine, Butte, Montana, U.S.A. Specimen A: Pure bright purplish platy mass with a little golden pyrites and large areas of metallic grey DIGENITE in association. 3x2½x1¼", £9.00. Specimen B: Pure bright purplish platy crystalline mass with a little golden pyrites. 2½x1½x1¼", £4.50p. Specimen C: As specimen B, 2¾x1¼", £2.25p.

39. CRONSTEDTITE. Wheal Jane, Kea, Cornwall. Bright blackish sharp crystals to 1 mm in size richly covering parts of elongated quartz crystals on quartz/pyrites matrix. 2½x2x1½", £9.00.

41. CUPRITE. Polcory Mine, Gwennap, Cornwall. Choice lustrous deep red sharp octahedral crystals to 5 mm in size richly covering both sides of massive cuprite/quartz matrix. 3x2½x1½", £27.00.

43. DIOPTASE. Tsumeb, Otavi, S.W. Africa. Very fine bright emerald green sharp crystals to 1 cm in size scattered all over small creamy rhombic Calcite crystals covering matrix, with a large cavity on the reverse side also lined with diopthase crystals to 1 cm in size. Very choice specimen for display. 5x3½x2", £275.00.

44. CUPRITE. Phoenix Mine, Linkinhorne, Cornwall. Very rich deep red mass with much silky bright green malachite lining cavities. 3x2½x1½", £6.00.

46. DOLOMITE. Florencio Mine, Egregord, Cumberland. Lustrous creamy grey cubic crystals richly covering one side of deep reddish-brownish ‘knightly hematite’ with large areas of small sparkling black Specularite crystals. 5x3½", £13.00

47. ENARGITE. Quiruvilca, Libertad Dept., Peru. Sharp bright metallic grey terminated crystals to 5 mm in size associated with golden pyritohedral pyrites crystals covering matrix. Specimen A: 2½x2½", £9.00. Specimen B: 1½x1", £5.50p.

48. FLUORITE. Mine la Bo, Pay-de-Dome, France. Turquoise-blue clear sharp cubic crystals to ½" in size intergrown and scattered on a thin membrane of quartz. Some of the crystals show a nice internal colour banding. 4½x3⅓", £25.00

49. FLUORITE. Musquiz, Chihuahua, Mexico. Specimen A: Fine deep purple translucent sharp cubic crystals with stepped faces, to ½" in size, forming an intergrown group. 4½x3½x2", £13.00 Specimen B: Transparent deep purple large sharp cubic crystal with stepped faces 1½" in size, implanted on smaller crystals. 2½x2½x2½", £9.00

50. FLUORITE. Corrales Mine, Asturias, Spain. Light purple translucent sharp cubic crystals with stepped faces to nearly ½" in size, richly intergrown and scattered on bright pyramidal Quartz crystals covering matrix. 4½x3½", £8.00

51. FLUORITE. Heights Mine, Weardale, Co. Durham. Transparent light green to purplish sharp twinned cubic crystals to 1 cm in size scattered all over minute quartz crystals on ironstone matrix. 3⅔x2½x⅓", £7.00

52. FLUORITE. Burtree Pasture Mine, Weardale, Co. Durham. Select light purple inter-penetrating twinned single crystal showing internal banding. 1½", £1.25p.

53. GALENA. Sweetwater Mine, Ellington, Missouri, U.S.A. Choice bright silvery-grey sharp and large single cubic crystal showing attachment on the base. 2½x1½x1½", £16.00

54. GALENA. Handsome Mee Vein, Smallclegill Mine, Westhead, Cumberland. Specimen A: Metallic grey wall formed cubic crystals to 1" in size scattered over creamy-brown dolomite crystals covering limestone matrix. 4x3⅓x1⅓", £12.00. Specimen B: Well formed metallic grey cubic crystal 1½x1½" in size implanted on matrix with a little pyrites. 2½x2x1½", £6.50p.

55. F. Festus Springs, Cherokee Co., Kansas, U.S.A. Sharp silvery-grey cubic crystals showing interesting growth patterns on their faces, to over ½" in size, scattered over matrix with sharp deep brown lustrous Phalenite crystals to ½" in size. 4½x2½x⅓", £8.00

59. KOTTIGITE. Mina Ojuelo, Mapimi, Durango, Mexico. Specimen A: Bright sage-green sharp bladed crystals aggregated in radiated star-like groups to 4 mm in size and scattered all over limonitic matrix. 3½x1½", £14.00. Specimen B: Sage-green tabular crystals aggregated in star-like groups to 5 mm in size with a little crystallised Selenite on both sides of limonitic matrix. 1½", £9.00.

60. LEPIDOLITE. Verul Lars, N. Sweden. Specimen A: Sharp hexagonal bright lavender coloured crystal books to 3½" in size scattered in pegmatite matrix with odd pinkish sections of Rubellite tourmaline. 3x2½x2", £5.50p. Specimen B: As specimen A, but without the rubellite. 2x1½x1½", £3.50p.

61. LEUCITE. Roccamonfina, Naples, Italy. Sharp creamy-white crystal with minor matrix attached. 1½x1½x1½", £4.75p.

62. LIBETHENITE. Miguel Vargas Mine, Alentejo, Portugal. Sharp bright olive green crystals mostly around 1-2 mm in size very richly scattered all over matrix. 3x2½x1½", £11.00
LIEBIGITE. Schwaebisch Gmuend Mine, Jefferson Co., Colorado, U.S.A. Lime green well formed crystals and crystal clusters thickly covering the surface and one side of matrix. 2x1", £6.00

64. LINGENITINE. Inspiration Mine, Miami, Arizona, U.S.A. Light green scaly crystals lying flat on areas of matrix. Specimen A: 2x2x1", £4.50p. Specimen B: 1½x1½x1", £2.50p.

66. MAGNETITE. Haytor Mine, Haytor Vale, Dartmoor, Devon. Bright black sharp octahedral crystals to 3 mm in size richly covering magnetite/actinolite matrix. 1½x1½x1", £2.50p.

67. MARGASITE. Spilin, Missouri, U.S.A. Bright golden metallic sharp spear-like crystals mostly around 5 mm in size thickly covering matrix with a little creamy calcite. 4x2½", £8.00.

68. MASSONNITESITE. Mendocino Co., California, U.S.A. Specimen A: Rich turquoise blue silky crystalline crust covering matrix. 2½x1½x1", £8.00. Specimen B: Thin turquoise blue crusts covering areas of matrix. 1½x1½x1", £3.25p.

70. NATIVE MERCURY. Socrates Mine, Sonoma Co., California, U.S.A. Bright silvery globules and patches richly scattered on and in matrix. 2½x1½", £3.25p.

71. MOTTAMITE. Tsumeb, Otavi, S.W. Africa. Sparkling deep brown micro crystals thickly covering a crystallised mass of Deschallite. 1½x1½", £4.50p.

72. Mimetite variety CAMPYJITE. Drygill Mine, Caldbeck Fells, Cumberland. Bright orangey sharp barrel shaped crystals mostly around 4-5 mm in size thickly covering black psilomelane coating quartz veinstufi. Very rich specimen for display. 5x3½x1½", £26.00.

73. ORPIMENT. Napoleon Vein, Quiruvilcan, Libertad Province, Peru. Specimen A: Very choice bright orangey sharp terminated crystals to 1 cm in size richly covering a brecciated matrix, with numerous lustrous deep red sharp HUTCHINSONITE crystals to 4 mm in length scattered on the reverse side. 4x3½x1½", £110.00. Specimen B: Bright orangey sharp crystals mostly around 8 mm in size thickly encrusting matrix, with small arpolime and barite crystals covering the reverse side. 4x2½", £34.00. Specimen C: Sharp bright orangey translucent crystals to 8 mm in size forming an intergrown group. 1½x1½", £9.00.

74. PAPAGOITE. New Cornelia Mine, Ajo, Arizona, U.S.A. Specimen A: Minute bright blue crystal and rich crystals covering areas of reddish matrix. 2½x2½", £11.00. Specimen B: Bright blue thick crust covering matrix. 1½x1½", £5.50p.

75. PARATACAMITE. Levant Mine, Pendeen, Cornwall. Deep green small sharp sparkling crystals thickly covering large areas on both sides of quartz veinstuff. 2½x1½", £9.00. Specimen B: As specimen A, but with both sides completely covered in crystals, 2x1½", £6.50p.

76. PARA-CEITE. Broken Hill, Namibia. Creamy coloured crystals and crystal sheaves to 5 mm in size richly covering large areas of a cellular parahopeite/limonite matrix. 2½x2½", £11.00.

78. PYRITES. Wheel Jane, Kea, Cornwall. Unusual bright brassy mass showing a brilliant botryoidal surface with cubic crystal faces in places. 2½x2½x1½", £4.50p.

79. PYRITES. Sovarrano Mine, Tuscany, Italy. Specimen A: Bright brassy sharp cubic crystals to ½" in size thickly intergrown and forming a dome-shaped specimen entirely composed a6 crystals. 4½x2½", £26.00. Specimen B: Bright brassy sharp striated pyritohedral crystals to ½" in size thickly intergrown on massive pyrites matrix. 3x2½x2½", £9.00. Specimen C: Complex sharp "right striated crystals to ½" in size forming an intergrown group. 2½x2½x1½", £5.50p.

80. PYRITES. Near Logrono, Spain. Brilliant brassy perfect sharp single cubic crystals. These are perfectly formed with clean undamaged faces. Specimen A: 30x30x30 mm, £5.50p. Specimen B: 22x22x22 mm, £4.50p.

81. PYROMORPHITE. Mine les Forges, Creuse, France. Bright translucent orangey to light brown sharp elongated hexagonal crystals mostly around 4-6 mm in size, thickly scattered over both sides of a group of large creamy white barite crystals. 4½x3½x2½", £64.00.
82. QUARTZ. Gillfoot Mine, near Egremont, West Cumberland. Transparent sharp doubly terminated crystals to over 2" in size intergrown on hematite matrix with lustrous brown curious saddle-shaped crystals of Dolomite and a little black platy Specularite. £3.25x2", 83.

83. QUARTZ. Varied from AMETHYST. Varz Cruz, Mexico. Specimen A: Very choice transparent slender terminated crystals being clear at their bases and grading through to a delicate amethystine shade towards their terminations. The crystals range up to 1\(\frac{1}{2}\)" in length and are scattered and free-sparingly all over matrix. 3x2x1", £3.00. Specimen B: Light purple sceptred well formed terminated crystal \(\frac{3}{4}\)" in length implanted on matrix with smaller crystals. 1x2x1", £3.25p.

84. QUARTZ. Val Tavetch, Grisons, Switzerland. Clear sharp termineted crystals to 1" in length intergrown on a calcite/quartz matrix, with light green scales of chlorite included and 'flextine' in the quartz crystals. 3x1x1\(\frac{1}{2}\), £2.00.

85. WOODCHROITE. Castro Virreyes Mine, near Lima, Peru. Well formed sharp light pink rhombohedral crystals to 5 mm in size scattered and intergrown on matrix with small milky quartz crystals. 2x2x1\(\frac{1}{2}\), £1.00.

86. SARABAITE. Sarabau Mine, near Bau, Sarawak, Borneo. Specimen A: Rich lustrous red masses associated with metallic gray Stibnite and a little creamy crystalline Xonotlite and Calcite. 2x1x1\(\frac{1}{2}\), £6.00. Specimen B: Rich red masses in calcite matrix with areas of yellowish cloudy Xonotlite. 2x1x1", £4.50p. Specimen C: Rich red masses with calcite and Xonotlite. 3x1\(\frac{1}{2}\), £2.25p.

87. SMITHSONITE. Broken Hill, Zambias. Lustrous transparent crystals to light brown sharp rhombohedral crystals to 5 mm in size thickly intergrown all over a cellular matrix. 1x2x1", £4.50p.

88. SMITHSONITE. Tsunab, Utevi, S.W. Africa. Fine large lustrous creamy rhombohedral crystals to over \(\frac{1}{2}\)" in size showing parallel growth on their faces, forming an intergrown group. 3x2x1\(\frac{1}{2}\), £1.00.

89. SPHALERITE. Zacatecas Mine, Ajo, Arizona, U.S.A. Very rich bright blue fibrous crystalline masses associated with light greenish AJOUTE. Specimen A: 2x2x1\(\frac{1}{2}\), £9.00. Specimen B: 1x1x1\(\frac{1}{2}\), £5.50p. Specimen C: 1x1", £3.25p.

90. SPHALERITE. Rempill Mine, Northumberland, Cumberland. Bright black sharp crystals to 1 cm in size thickly intergrown all over a cellular matrix with small bright Quartz crystals in places. 3x2x1\(\frac{1}{2}\), £9.00.

91. SPHALERITE. Rempill Mine, Northumberland, Cumberland. Bright black sharp crystals to 1 cm in size thickly intergrown on both sides of matrix with areas of bright creamy small sparkling quartz crystals. 3x2x1\(\frac{1}{2}\), £6.50p.

92. STANNOlTE. Wheel Jane, Ken, Cornwall. Rich greyish metallic mass with threads of golden chalcopyrite. 2x2x1\(\frac{1}{2}\), £3.25p.

93. STIBICONITE after STIBNITE. Catorca, San Luis Potosi, Mexico. Fine creamy to yellowish sharp striated elongated terminated stibnite crystal antisea replaced by Stibiconite. The crystal is 6 mm long by 1 cm across the axis, and there is another crystal, well formed and terminated, \(\frac{1}{2}\) cm long attached on one side. Overall size of specimen is 6x2x1", £2.00.

94. STIBNITE. Herja, Rumania. Fine bright silvery-grey sharp elongated terminated crystals to \(\frac{1}{2}\)" in length completely covering and free-standing on a cellular matrix, rather resembling a hedgehog in appearance. Choice specimen for display. 4x3x1\(\frac{1}{2}\), £1.10p.

95. STILPnomELANE. Landsvnrk, Evja, Norway. Olive-green scale crystalline masses richly scattered on microcline feldspar matrix. 1x2x1\(\frac{1}{2}\), £2.25p.

96. TETRACHRIDE. Coapalco, Lima Prov., Peru. Specimen A: Very large bright silvery-grey sharp tetraehedral crystals to \(\frac{1}{2}\)" in size forming an intergrown group with a large lustrous brown Sphalerite crystal \(\frac{1}{2}\)" in size, and a partial later Frosting of small bright sparkling Quartz crystals in places. Fine museum display specimen. 5x4x1\(\frac{1}{2}\), £8.00. Specimen B: Large bright silvery-grey sharp crystals to 1" in size forming an intergrown group with a frost of small sparkly milky quartz crystals in places. 5x4x1\(\frac{1}{2}\), £4.00. Specimen C: Large bright silvery-grey sharp crystals to 1" in size forming an intergrown group with oddl lustrous dark brown Sphalerite crystals to \(\frac{1}{2}\)" in size, and with a frost of bright sharp milky Quartz crystals to nearly \(\frac{1}{2}\)" in length covering large areas of the specimen. 5x4x1\(\frac{1}{2}\), £26.00. Specimen D: Bright silvery-grey crystals to \(\frac{1}{2}\)" in size forming an intergrown group with a frosting of small sharp sparkly milky quartz crystals in places. 5x4x1\(\frac{1}{2}\), £5.50p. Specimen E: Sharp silvery-grey crystals to \(\frac{1}{2}\)" in size forming an intergrown group with a partial coating of small creamy quartz and calcite crystals. 1x4x1\(\frac{1}{2}\), £8.00.
97. **TOPAZ.** Tepezate, San Luis Potosi, Mexico. Clear well-formed elongated crystals with a slight reddish colour towards their terminations, to 9 mm in size, intergrown on a cellular matrix. 1x1", £1.75p

98. **TURBERNITE.** Wheal Edward, St. Just, Cornwall. Sharp light green tabular crystals to 2 mm in size richly scattered all over iron stained quartz vein stuff. Specimen A: 2¾x1¾x1½", £4.50p. Specimen B: 1¾x1¼x1", £2.25p

99. **META TURBERNITE.** Old Gunnislake Mine, Gunnislake, Cornwall. Bright green platy crystals lying flat on ferruginous matrix. 1x1", £4.50p

100. **TOURMALINE variety DRAVITE.** Yinniatharr, Western Australia. A large sharp lustrous brown double-terminated single crystal showing a multiple termination on one end. 3¼" long by 3¾" across the axis, £14.00

101. **TURQUOISE.** Bunny Mine, Hensbarrow Moor, Cornwall. Bright turquoise-blue moss with a little quartz, and with a central cavity showing a cellular crystalline structure. 2x1½x1", £3.25p

102. **TYROLITE.** Falkenstein, Tyrol, Austria. Rich light green lustrous fan-like crystal masses covering areas of milky quartz with a little malachite and azurite. Specimen A: 3½x2½", £8.00. Specimen B: 2¼x2½", £4.50p. Specimen C: 1¾x1", £2.25p

103. **ULLMANNITE.** Sachendorf, Siegerland, Germany. Solid dark metallic grey heavy crystalline masses. Specimen A: 7½x1¼", £6.50p. Specimen B: 1¼x1", £4.50p

104. **WAVELLITE.** Avant, Arkansas, U.S.A. Very choice silky light green hemispherical radiated masses to ½" in diameter thickly covering large areas of a light coloured matrix. Some of the masses form complete 'bells' and show a well crystallised exterior. Fine specimen for display. 3½x2¼x2½", £14.00

105. **WULFENITE.** Old Yuma Mine, near Tucson, Arizona, U.S.A. Transparent yellowy sharp tabular platy crystals to ⅝" in size scattered on cellular matrix. 2x1¾x1", £4.50p

Wishing you a very happy Christmas and good collecting in the New Year!
